FERMANAGH HOUSE,  
ORMEAU AVENUE,  
BELFAST.

*October, 1945.*

*To Major the Right Honourable J. Maynard Sinclair,  
Minister of Finance for Northern Ireland.*

SIR,

I have the honour to submit the Twenty-second Annual Report on the Births, Deaths, and Marriages registered in Northern Ireland, together with Abstracts of the particulars of such registrations. The Report relates to the year ended 31st December, 1943. The Abstracts have been prepared for presentation to Parliament, pursuant to the provisions of statutes governing the registration system. The Report draws attention to the salient features of the vital statistics contained in the Abstracts, and figures relating to previous years are included for purposes of comparison. Information is also given relating to vaccination, notifications of infectious diseases, and weather conditions, but migration statistics are not at present available.

I beg to acknowledge the valuable assistance rendered by Dr. J. Boyd, Chief Medical Officer of the Ministry of Health and Local Government, who advises this office in regard to medical matters. I also desire to record my appreciation of the courtesy shown by the Registrars-General of England and Wales, Scotland, and Eire, in furnishing information relating to the areas under their respective administrations.

I have the honour to be, Sir,

Your most obedient Servant,

W. A. CARSON,  
*Registrar-General of Births, Deaths, and  
Marriages for Northern Ireland.*

## ABSTRACTS

I. Marriages registered in each of the Counties, showing Method of Celebration . . . . .	22	VIII. Population of Northern Ireland by Sexes and Ages according to the Census of 1937 . . . . .	39
II. Marriages registered in each of the Counties, showing the number registered in each quarter of the year, the Civil Condition of the Persons married, and the number of Minors . . . . .	22	IX. Deaths of Males and Females at different Age-Periods in each of the Counties . . . . .	40
III. Births in each of the Counties, showing the number in each quarter of the year, distinguishing Males and Females . . . . .	23	X. Proportion of Deaths from Principal Causes at certain Age-Periods . . . . .	41
IV. Deaths in each of the Counties, showing the number in each quarter of the year, distinguishing Males and Females . . . . .	23	XI. Deaths from Cancer by Sex, Age and Site, 1943 . . . . .	42
V. Counties and Principal Towns (i) Deaths from Principal causes. (ii) Total Deaths and Births, and other Statistics . . . . .	24	XII. Infant Mortality Rates, 1938-1943 . . . . .	43
VI. Deaths by causes of Males and Females at different Age-Periods . . . . .	28	XIII. Infant Mortality Rates for Belfast Co. Borough and the Aggregates of Urban and Rural Areas, 1938-1943 . . . . .	44
VII. Deaths in Institutions, 1934-1943 . . . . .	38	XIV. Mortality among Illegitimate Children, 1938-1943 . . . . .	45
		XV. Notifications of certain Infectious Diseases, 1943 . . . . .	46
		XVI. Northern Ireland, Belfast Co. Borough and Londonderry Co. Borough—Summary of Vital Statistics for the years 1941, 1942 and 1943 . . . . .	47

NOTE—Owing to wartime pressure on staff and the necessity of conserving supplies of paper, this Report and those for 1939 to 1942 have been reduced in length by the temporary omission of graphs and other diagrams and by adjustments in certain tables of minor importance. Readers desiring to see (in graphical form) the general trend of vital statistics during past years are recommended to consult the Annual Report for 1938 (H.C. 471).

Certain tables formerly embodied in the text of the volume have been transferred to the Abstracts Section.

# Annual Report of the Registrar-General for Northern Ireland

## REPORT

**NOTE**—A survey of the administrative functions of the office of the Registrar-General is contained in the Reports for 1939 and previous years.

### SUMMARY OF REGISTRATION.

**1. Introductory.**—The figures contained in this Report may be regarded as final, and as superseding the provisional figures already published for the year 1943 in the Registrar-General's weekly and quarterly returns. It should be noted that statistics of deaths (for years 1941-43) relate to civilians only.

The value of the statistical information concerning deaths contained in the Registrar-General's Annual Reports and other publications is to a large extent dependent on the degree of care and accuracy with which the members of the medical profession enter the required particulars on the form of medical certificate of the cause of death. The particulars so given are incorporated in the death entries, and thus in every case in which a person had been attended in his or her last illness by a medical practitioner, the medical certificate given by the latter forms the basis upon which the cause of death is classified.

In the case of the death of a person who had not been medically attended in his or her last illness, and no inquest had been held, the cause of death is entered in the register from such information as the informant of the death can supply to the Registrar. (See section 24, page 16, as to uncertified deaths.)

For the purpose of the Registrar-General's Annual Reports the classifications adopted are the Intermediate and Short Lists shown in the "Manual of the International List of Causes of Death, as adapted for use in England and Wales, Scotland, and Northern Ireland," published by H.M. Stationery Office.

Abstract VI shows the deaths classified under the headings of the Intermediate List (slightly amplified in the case of tuberculosis and modified in the case of violent deaths), while the causes shown in Abstracts V and X and certain of the tables in the text, are in accordance with the Short List. The Detailed List numbers have also been given in Abstracts V and VI for purpose of reference.

In general in the tables and abstracts, dots (.) are used to indicate "none," and dashes (—) are used to indicate that information cannot be given or that the headings are not applicable.

Throughout the Report, births and deaths have been allocated to the district of normal residence, births having been assigned to the

districts containing the normal residence of the parents, and deaths to the districts containing the normal residence of the deceased persons.

**2. Marriages, Births, and Deaths Registered.**—The results of the year's registration, as compared with the figures for 1942, show a considerable increase in the birth rate but a decrease in the marriage rate whilst the death rate is almost unchanged, being 0.1 above that for the previous year (see Table B on page 7). The infant mortality rate has increased in urban, and decreased in rural districts, vide para. 26. Further comments will be found under the relative headings below.

**3. Vaccinations.**—As returned by the Registrars, the successful Primary Vaccinations during the year numbered 21,700, or 69 per cent. of the total births registered, as compared with 74 per cent. in 1942.

**4. Adoption of Children Act (N.I.), 1929.**—A Register of Children adopted under the provisions of this Act is kept in the General Register Office, to which the Adoption Orders made by the Courts are communicated. A certified copy of an entry in this register is evidence of adoption, and is also evidence of the date of birth, if that date is recorded in the entry. The children whose adoptions were recorded in the Adopted Children Register during 1943 numbered 274, the figures for 1942 and 1941 being 249 and 191 respectively.

## MARRIAGES.

**5. Number and Rate.**—Marriages registered during the year numbered 10,155 which is 1,518 less than the previous year. The rate, 7.79 per 1,000 of the estimated population, is 1.22 below that for the year 1942. Despite this considerable drop, the marriage rate is higher than the rate for any year from 1920 to 1940. Of the contracting parties, 4.8 per cent. of the husbands and 18.5 per cent. of the wives were minors.

**6. Method of Celebration.**—Table C shows for Northern Ireland the marriages registered during the years 1927 and 1937 to 1943 according to methods of celebration, the figures for Methodist marriages being given separately for the first time in this Table. The denominations are placed in the order of the number of members at the last Census. It will be observed that the decrease in the number of marriages in 1943 is distributed over practically all denominations. Marriages taking place in Registrars' Offices in the year under review represented 7.9 per cent. of the total marriages, as compared with 4.8 per cent. in 1922.

**7. Signatures by "Mark."**—Of the 20,310 persons married 54 men and 35 women, or 0.4 per cent. of the persons married, signed the registers or certificates by "mark," as compared with 2.1 per cent. in 1922.

**TABLE A.—Northern Ireland: Population, Marriages, Births, and Deaths, 1931-1943, with Quinquennial Averages from year 1911.**

YEAR	Estimated Population	Marriages	Births (Total)	Illegitimate Births	Deaths	Deaths of Infants under 1 year of Age

1943	2,928	3,100	2,528	495	281	807	11	10,155	7.79

### BIRTHS.

**8. Number and Rate.**—The births registered during the year numbered 31,521, an increase of 1,876 as compared with the previous year. The birth rate was 24.2 per 1,000 of the estimated population, being 1.3 above the rate for the previous year. The number of births and the birth rate are the highest for any year since 1920, when the births numbered 32,521 and the rate was 25.9. Illegitimate births numbered 1,728, an increase of 261 as compared with the number recorded for 1942; the proportion to total births (5.48 per cent.) being 0.53 above that for the previous year. In England and Wales, Scotland and Eire, the illegitimate births as percentages of the total births were 6.39, 7.58 and 3.80 respectively for the year 1943.

**9. Proportion of Males to Females.**—Births of males in Northern Ireland in 1943 numbered 16,337 and those of females 15,184; the proportion of male to female births was therefore 1,076 to 1,000. The corresponding proportions for each of the years 1938-42 were 1,052, 1,044, 1,082, 1,096 and 1,060 respectively.

**TABLE D.—Northern Ireland : County and Urban and Rural Birth and Death Rates, 1941-43.**

AREA	Births per 1,000 of Population			Deaths per 1,000 of Population		
	1941	1942	1943	1941	1942	1943
Northern Ireland .. ..	20.9	22.9	24.2	15.2†	13.3	13.4
Belfast Co. Borough .. ..	19.1	24.4	25.7	15.1†	12.6	13.2
Londonderry Co. Borough ..	22.4	28.1	31.2	14.7	13.1	13.3

County Tyrone .. ..	22.4	22.4	24.0	15.1	14.7	14.5
Aggregate of Urban Areas ..	20.4	24.4	25.6	15.1†	12.9	13.0
Aggregate of Rural Areas ..	21.4	21.3	22.6	15.4	13.8	13.7

† Excluding the County Borough.

‡ The civilian death rates for Northern Ireland, Belfast County Borough, and the aggregate of Urban Areas become 14.6, 13.2 and 13.8 respectively when the deaths caused by air raids are excluded.

**10. Multiple Births.**—Of the 31,521 children whose births were registered during the year, 30,808 were born singly, 704 children were twins, and 9 children were triplets. Still-births not being registered in Northern Ireland, a birth of one live child and one still-born child is regarded as a single birth, a birth of two live children and one still-born child as a twin birth, and so on.

## DEATHS.

**11. Number and Rate.**—The number of civilian deaths recorded during the year 1943, and the civilian death rate per 1,000 of the population, were 17,437 and 13.4 respectively. The comparative figures for 1942 were 17,256 and 13.3. The death rate for 1942 is the lowest on record and that for 1943 is the second lowest. That these two rates should have been recorded under the conditions prevailing during the war is indeed noteworthy.

Of the total deaths, 8,812 were of males and 8,625 were of females, the equivalent annual death rates being 13.9 and 12.9 per 1,000 of the male and female estimated populations respectively. The corresponding rates for 1942 were 14.0 and 12.7.

**12. Deaths in Institutions.**—The numbers of deaths occurring in institutions in each of the years 1934-43 are shown in Abstract VII. 35.2 per cent. of the deaths registered in 1943 took place in institutions (3.3 per cent. in public mental hospitals, 16.2 per cent. in poor law institutions, 5.9 per cent. in district hospitals, and 9.8 per cent. in other hospitals and infirmaries), and the remaining 64.8 per cent. occurred in the deceased person's own home, in private nursing homes, or in places other than the institutions already described. The percentage of deaths taking place in institutions has risen from 17.0 in 1924 to 35.2 in 1943.

**13. Proportion of Deaths from the Principal Causes.**—Abstract X shows the deaths from the principal causes as proportions per 1,000 of the total deaths in certain age groups. It will be seen from this abstract that, for all ages taken together, heart disease bears the greatest proportion to the total deaths, which is the usual experience; and that the deaths from this cause occur mainly among persons of fairly advanced ages. The proportions were high also for cancer, intra-cranial vascular lesions, tuberculosis, pneumonia, congenital malformations, etc., and bronchitis.

At ages under one year, apart from congenital malformations, etc., and premature birth, the highest proportions of deaths were caused by pneumonia and diarrhoea.

Between the ages of one and ten the highest proportions were caused by the common infectious diseases, tuberculosis (the deaths from which are mainly due to tuberculosis of the central nervous system), pneumonia, diseases of the digestive system, and road traffic accidents.

Between the ages of ten and thirty-five, tuberculosis (principally of the respiratory system) caused by far the largest proportion of deaths.

From age thirty-five onwards, heart disease, cancer, intracranial vascular lesions, tuberculosis, pneumonia, diseases of the digestive system, bronchitis and nephritis were responsible for the largest proportions of the total mortality.

Table E shows for each of the principal causes the numbers of deaths and the death rates for each year since 1940, together with corresponding particulars for Eire in respect of the year 1943.

**14. Deaths from the Principal Epidemic Diseases\***—The deaths from diseases in this group numbered 1,008, representing 5.8 per cent. of the total deaths. The corresponding figures for the year 1942 were 709 and 4.1.

With the exception of measles, diphtheria, and typhus (from which disease there were no deaths as compared with one in the preceding year) the numbers of deaths from diseases in this group show increases when compared with the figures for 1942. The increases were most marked in connection with influenza, diarrhoeal diseases of children under two years of age, and whooping cough. To a lesser extent there were increases in deaths from scarlet fever, and typhoid and paratyphoid fevers. There were two deaths from dysentery as compared with none in the previous year.

The notifications of certain infectious diseases for each District in Northern Ireland for the year 1943 are shown in Abstract XV.

**15. Influenza.**—The deaths from influenza during the year numbered 339, giving a rate of 0.26 per 1,000 of the population, compared with a rate of 0.15 for the year 1942. Usually mortality is highest from this disease in the first quarter of the year, but in the year 1943 it was highest in the fourth quarter.

---

\* Typhoid and paratyphoid fevers, scarlet fever, whoopin , cough, diphtheria, dysentery, influenza smallpox, measles, typhus, and diarrhoeal diseases of children under 2 years of age.

**TABLE E.—Northern Ireland : Number of Deaths from the Principal Causes, with Death Rates per 100,000 of Estimated Population, and Number and Percentage of Uncertified Deaths, 1940-43.**

\* Including accidents.

† Including deaths of civilians due to war operations.

**16. Tuberculosis.**—The death rate from this cause of 0.91 per 1,000 of the population is 0.06 below the rate for 1942. Further, the death rate from tuberculosis in 1943 is the lowest since that recorded for 1939, *vide* Table F. The corresponding rates for England and Wales, Scotland and Eire in 1943 were 0.67, 0.83 and 1.46 respectively.

From Abstract X it will be seen that tuberculous diseases have caused 465 deaths in every 1,000 between the ages of 15 and 25, and 369 per 1,000 between 25 and 35. Further, from Abstract VI it appears that 41 per cent of the deaths from all forms of tuberculous disease during 1943 occurred between the ages of 15 and 35.

Tuberculosis is in general much more prevalent in the cities and towns than in the country districts. In 1943 the rate per 1,000 of the population for all urban areas was 1.08 and for rural areas 0.73. The rates in 1942 were 1.09 and 0.85, respectively.

Tuberculosis of the respiratory system accounted for 73 per cent. of the total deaths from tuberculosis, as compared with 75 per cent. in 1942.

**TABLE F.—Northern Ireland : Deaths and Death Rates from Tuberculosis (All Forms), 1926, 1937-43.**

YEAR	MALES		FEMALES		TOTAL	
	Number of Deaths	Rate per 1,000 of the estimated Male population	Number of Deaths	Rate per 1,000 of the estimated Female population	Number of Deaths	Rate per 1,000 of the estimated population

**TABLE G.—Northern Ireland : Death Rates per 1,000 of the Population from Tuberculosis (All Forms) by Counties, 1926, 1937-43.**

YEAR	Antrim	Armagh	Belfast County Borough	Down	Fermanagh	Londonderry County and County Borough	Tyrone
1926	1.29	1.38	1.74	1.43	0.98	1.29	1.38
1937	0.81	1.14	1.16	0.85	1.03	0.74	0.92
1938	0.70	1.08	1.03	0.83	0.90	0.91	0.89
1939	0.71	0.74	0.98	0.84	0.68	0.84	0.78
1940	0.65	1.09	1.14	0.99	0.71	1.02	0.94
1941	0.81	1.03	1.20	1.09	0.74	1.03	0.93
1942	0.68	1.11	1.13	0.90	0.68	0.96	1.12
1943	0.74	0.90	1.16	0.77	0.78	0.78	0.87

The abstracts of causes of death give particulars regarding the sexes and ages of the persons who died from the various forms of tuberculous disease during the year, and also the deaths from tuberculosis allocated to each county and to each of the principal

towns in Northern Ireland. Table F affords comparison of the summarised figures for 1943 with those for certain preceding years. Table G shows comparisons of the summarised figures for each of the six counties of Northern Ireland and Belfast County Borough.

**17. Cancer.**—The number of deaths from cancer in Northern Ireland during 1943 was 1,892, giving a crude death rate of 1.45 per 1,000 of the population, which is 0.03 above the rate for 1942. The general tendency over a number of years has been for this rate to show a more or less steady increase.

The death rates from cancer among males and females in 1943 were 1.42 and 1.48 per 1,000 respectively ; the male rate thus being 96 per cent. of the female rate, as against 94 per cent. in 1942.

The most frequent sites of fatal cancer among males during the year were stomach, 205 ; intestines, 133 ; rectum, 79 ; prostate, 64 ; lung, 48 ; and liver and gall bladder, 38. Among females the most frequent sites were intestines, 181 ; stomach, 166 ; breast, 159 ; uterus, 110 ; rectum, 47 ; and liver and gall bladder, 46.

Abstract XI gives particulars regarding sex, age and sites of fatal cancer during the year 1943.

**18. Cerebral Haemorrhage, Apoplexy, etc.**—The deaths assigned to this group (now described as “ Intra-cranial vascular lesions ”) numbered 1,458, giving a rate of 1.12 per 1,000 of the population. This rate is 0.05 above that for 1942.

**19. Heart Disease.**—The deaths from the various forms of heart disease during the year numbered 3,826, the rate per 1,000 of the population being 2.93, which is 0.14 above that for the previous year. The death rate from this disease has been more or less steadily increasing over a number of years.

**20. Bronchitis.**—The deaths from bronchitis during the year numbered 578, giving a rate of 0.44 per 1,000 of the population, which is 0.13 below the rate for 1942.

**21. Pneumonia.**—There were 988 deaths from pneumonia during 1943, the rate per 1,000 of the population being 0.76, compared with a rate of 0.66 per 1,000 in 1942.

**22. Pregnancy and Childbirth.**—The mortality of women during pregnancy and childbirth is classified under two headings, namely—(1) diseases of pregnancy, childbirth and the puerperal state, and (2) diseases or causes combined with pregnancy and childbirth. The causes of death shown in Table H are those to which the various deaths were assigned.

**TABLE H.—Northern Ireland: Deaths of Women in Pregnancy and Childbirth, 1943.**

From Table J it will be seen that the deaths from diseases of pregnancy, childbirth and the puerperal state in 1943 yielded a rate of 3.17 per 1,000 births, which is an increase of 0.21 as compared with the rate for 1942. It should be remembered, however, that the rate for 1942 was the lowest yet recorded. The rate for 1943 is in fact the second lowest.

The rate for diseases combined with pregnancy and childbirth decreased from 0.98 in 1942 to 0.63 in the year under review.

**TABLE J.—Northern Ireland: Deaths of Women in Pregnancy and Childbirth, 1926, 1937-43.**

YEAR	Deaths from Diseases of Pregnancy, Childbirth and the Puerperal State (classified as Childbirth).						Deaths from Diseases or Causes combined with Pregnancy and Childbirth (not classed as Childbirth)

ALL RURAL AREAS {	8 <i>13</i>	43 <i>40</i>	51 <i>53</i>	14,285 <i>12,146</i>	0.56 <i>1.07</i>	3.01 <i>3.29</i>	3.57 <i>4.36</i>
Belfast Co. Borough {	12 <i>10</i>	20 <i>23</i>	32 <i>33</i>	10,713 <i>8,972</i>	1.12 <i>1.11</i>	1.87 <i>2.56</i>	2.99 <i>3.67</i>
Londonderry Co. Borough {	1 <i>1</i>	4 <i>4</i>	4 <i>5</i>	1,496 <i>1,239</i>	0.81 <i>0.81</i>	2.67 <i>3.23</i>	2.67 <i>4.04</i>

Table K shows the number of deaths from puerperal diseases, distinguishing puerperal and post-abortive sepsis, with corresponding rates for the aggregates of the Urban and Rural Areas and the County Boroughs in Northern Ireland for the year 1943 and for the average of the years 1938 to 1942. From this it will be seen that the rates for all puerperal diseases show an improvement on the average annual rates for the preceding five years.

**23. Violent Deaths.**—The number of deaths ascribed to violence during the year was 565 (395 males and 170 females), which is a decrease of 88 on the number registered for 1942, and is equivalent to 3.2 per cent. of the total deaths registered. Of these 565 deaths, 12 were attributed to homicide, 52 to suicide, and 498 to accidental causes (as compared with 582 deaths caused by accidents in 1942).

Included in the 56 deaths from drowning, shown in Table L, there were 8 cases (5 males and 3 females) in which the Coroners returned a verdict of "found drowned." It is possible that some of these deaths were due to suicide.

Of the 45 deaths from burns and scalds, 13 were of children under 5 years of age.

**TABLE L.—Northern Ireland: Violent Deaths, 1941-43.**

\* Deaths of civilians due to war operations.

**24. Uncertified Deaths.**—The deaths registered as uncertified, i.e., those in which there was neither a medical attendant during the last illness nor an inquest held by a coroner, numbered 713, representing 4.1 per cent. of the total deaths registered. The percentage of uncertified deaths has been falling more or less steadily during the past twenty years, the figure for 1943 being the lowest on record. In 1922 uncertified deaths represented 12.7 per cent. of the total deaths.

Of the total deaths in rural areas 516, or 5.9 per cent., were uncertified; in urban areas the number was 197, or 2.2 per cent.

Deaths of persons aged 65 years and upwards represented 63.7 per cent. of the uncertified cases, and deaths of infants under 1 year of age 16.8 per cent.

**25. Inquests.**—The circumstances of 964 deaths were considered by the coroners in 1943. Inquests were held in 579 of these cases, which represents one inquest for every 30 deaths registered. In 1942 the inquests numbered 643.

**26. Infant Mortality.**—Deaths of infants under 1 year of age numbered 2,464, or 78 per 1,000 births registered, as compared with 76 per 1,000 in 1942. Of the 2,464 deaths of infants under 1 year of age, 1,422 were of males and 1,042 of females, the former number being equivalent to 87 per 1,000 births of males and the latter to 69 per 1,000 births of females. The corresponding rates for 1942 were 87 and 65 respectively.

The infant mortality rate for the aggregate of the Urban Districts of Northern Ireland in 1943 was 95 per 1,000 births, and the rate for the aggregate of the Rural Districts was 58 per 1,000, the corresponding rates for 1942 being 87 and 64 respectively.

In 1943 and 1942 the rates for deaths of infants under 1 year of age were 49 and 51 per 1,000 births, respectively, for England and Wales; 65 and 69 for Scotland; and 83 and 69 for Eire.

**TABLE M.—Infant Mortality Rates for Belfast Co. Borough and Londonderry Co. Borough with Comparative Rates for Towns of approximately the same Populations in Great Britain and Eire, 1943.**

Town	Population	Deaths of Infants under 1 year of Age per 1,000 Births
BELFAST .. ..	436,100	111
Bristol .. ..	424,596	45
Leeds .. ..	457,411	47

Burton-on-Trent .. ..	46,981	58
Chester .. ..	47,863	54
Crewe .. ..	48,155	40
Scarborough .. ..	45,987	32
Shrewsbury .. ..	43,715	35
Woking .. ..	47,183	37
Ayr .. ..	43,766	54
Kirkcaldy .. ..	45,126	46
Limerick .. ..	42,518	76

NOTE—The population figures for towns in the United Kingdom are those of the 1939 National Register. The population figures for towns in Eire are those of the 1941 Register of population.

In Table M the infant mortality rates for Belfast and Londonderry Co. Boroughs are compared with those for towns of approximately the same populations in Great Britain and Eire. It will be seen that the rates for these Northern Ireland towns do not compare favourably with those for cross-channel towns of comparable size.

Abstract XII gives the infant mortality rates for Northern Ireland for each of the six years 1938-43, by causes of death, and, for the last of these years, by sexes and age-periods.

Abstract XIII compares the infant mortality rates for the aggregate of the urban areas with those for the aggregate of the rural areas of Northern Ireland. The differences usually found between urban and rural rates and between male and female rates are marked, the urban rates being, in general, appreciably in excess of the corresponding rural rates.

The infant mortality rate for Belfast County Borough for 1943 was 111. The corresponding rates for each of the years 1938 to 1942 were 96, 85, 122, 91 and 92 respectively. Abstract XIII gives the infant mortality rates for Belfast County Borough, for each of the six years 1938-43, by the principal causes of death. The rates for the year 1943 are given also by sexes and age-periods.

Abstract V gives the number of infant deaths, together with the number of births, for each County and for each of the principal towns in Northern Ireland. Figures for the aggregates of urban and rural areas are also given.

**27. Mortality among Illegitimate Children.**—Deaths of illegitimate children under 1 year of age numbered 249 in 1943, which is equivalent to a rate of 144 per 1,000 of the illegitimate births registered, as compared with a rate of 157 for the previous year. The corresponding rates for legitimate children in 1943 and 1942 were 74 and 72 per 1,000 respectively.

Abstract XIV shows the deaths of illegitimate children by the principal causes and for age-periods in 1943, together with the mortality rates among illegitimate children for each of the years 1938-43. Most of these rates are considerably in excess of the corresponding rates for all children; particularly the rates for congenital debility, etc., premature birth and injury at birth, diarrhoea and enteritis, pneumonia, and inattention at birth. It should, however, be noted that the rates for some of the causes are based on very small numbers of deaths.

#### POPULATION.

The *civilian* population of Northern Ireland was estimated at 1,304,000, which represents the mean of the quarterly estimates, and the rates in this Report (relating to 1943) for the country as a whole have been based on this estimate. The rates for 1943 for the various divisions of the country have been based on populations calculated in the same manner as that for the country as a whole. The 1937 Census population figures for the counties and principal towns of Ireland are given at the foot of Abstract V.

#### THE WEATHER.

Reports on the weather experienced in Northern Ireland during each month of the year 1943, as furnished by the Director of the Meteorological Office, England, are published in the Quarterly Returns of Births, Deaths, and Marriages for that year. Table N shows for the stations of Armagh, Garvagh and Aldergrove the Average Air Temperature, Rainfall, and Sunshine in 1943.

TABLE N.—Northern Ireland: Air Temperature, Rainfall, and Sunshine obtained from Readings taken at the Stations of Armagh, Garvagh and Aldergrove, 1943.

\* A dash indicates that the disease is not compulsorily notifiable in that area.

\* In Belfast only the first case of measles or whooping cough in a household is required to be notified, unless a period of 2 months intervenes in the case of the former disease and 3 months in the case of the latter.

† At the Tuberculosis Institute, Belfast, during the year 626 persons were diagnosed as suffering from tuberculosis, of which 554 cases were notified as cases of acute infectious tuberculosis, and have been included above.

(a) 2 poliomyelitis, 6 dysentery and 20 ophthalmia neonatorum. (b) 3 poliomyelitis, 1 ophthalmia neonatorum, 2 encephalitis lethargica and 3 mixed infection-scarlet fever and diphtheria. (c) poliomyelitis. (d) mixed infection-scarlet fever and diphtheria. (e) dysentery. (f) mixed infection-tuberculosis and meningitis. (g) 2 relapsing fever, and 1 mixed infection-scarlet fever and German measles. (h) 1 mixed infection-measles and tuberculosis, 1 poliomyelitis, and 1 mixed infection-scarlet-pneumonia and whooping cough. (i) ophthalmia neonatorum.
