

GOVERNMENT OF NORTHERN IRELAND

THE REGISTRAR-GENERAL'S ANNUAL REPORT FOR 1953

containing general Abstracts of Births, Deaths and
Marriages registered in Northern Ireland during the Year

TOGETHER WITH

Returns of Notifications of Infectious Diseases and
Meteorological Summary

Presented to Parliament pursuant to Statute

BELFAST

HER MAJESTY'S STATIONERY OFFICE

PRICE 3s. 6d. NET

H.C. 1123

GENERAL REGISTER OFFICE,
FERMANAGH HOUSE,
ORMEAU AVENUE,
BELFAST.
10th September, 1954.

TO THE RIGHT HONOURABLE W. B. MAGINESS, Q.C., LL.D.,
Minister of Finance for Northern Ireland.

SIR,

I have the honour to submit the Thirty-Second Annual Report on the Births, Deaths, and Marriages registered in Northern Ireland, together with Abstracts of the particulars of such registrations. The Report relates to the year ended 31st December, 1953. The Abstracts have been prepared for presentation to Parliament, pursuant to the provisions of statutes governing the registration system. The Report draws attention to the salient features of the vital statistics contained in the Abstracts, and information is given relating to notifications of infectious diseases, migration and the weather.

I wish to acknowledge the valuable assistance rendered by Dr. J. Boyd, Chief Medical Officer of the Ministry of Health and Local Government, who advises this office in regard to medical matters. I also desire to record my appreciation of the courtesy shown by the Registrars-General of England and Wales, Scotland and the Irish Republic, in furnishing information relating to the areas under their respective administrations.

I have the honour to be, Sir,

Your most obedient Servant,

L. C. Mulligan,

Registrar-General of Births, Deaths, and
Marriages for Northern Ireland.

Thirty-Second Annual Report of the Registrar-General for Northern Ireland

SUMMARY

The total number of births registered in Northern Ireland during the year 1953 was 28,984, an increase of 224 over the number for 1952 and 507 over that for 1951. The birth rate was 20.9 per 1,000 of the population and is unchanged from the rate for 1952, but is 0.3 below the average rate for the five years 1948-52.

Illegitimate births, which are included in the total birth figures, numbered 818, a decrease of 141 from the previous year. The number for 1953 is the lowest on record, the next lowest being that for 1951 when 895 illegitimate births were registered.

The number of marriages in 1953 was 9,416, which is 116 above the 1952 figure. The marriage rate of 6.8 is the same as the average rate for the previous five years.

Deaths numbered 14,813 in 1953 as compared with the practical identical figure of 14,812 in 1952. The rate per 1,000 population was 10.7, the lowest ever recorded and shows a decrease of 0.1 below the rate for the previous year and 0.9 below the average rate for the preceding 5 years. Of the total deaths 9,321 or 62.9 per cent. were of persons aged 65 and upwards ; 1,242 or 8.4 per cent. were of children under 5 years of age.

Heart diseases, cancer and cerebral haemorrhage, apoplexy etc., accounted for 32.5, 14.3 and 13.0 per cent. respectively of the total deaths. Deaths from these causes were mostly among persons of fairly advanced age.

The downward trend in deaths from tuberculosis was continued in 1953, and the mortality rate of 0.23 per 1,000 population is the lowest on record.

The infant and maternal mortality rates are the lowest ever recorded. There were 17 deaths from maternal causes compared with 31 in each of the years 1951 and 1952. In 1953 there were 163 such deaths.

The estimated population at 30th June, 1953 was 1,384,100, an increase of 9,400 from 1952. During the year ended 30th June, 1953 there was an excess of births over deaths of 14,224, but this was reduced by a balance of outward over inward migration estimated at 4,824.

POPULATION

The home population of Northern Ireland as estimated at 30th June, 1953 was 1,384,100 persons. This estimate, comprising civilians and members of the armed forces stationed in Northern Ireland and based on the census population ascertained on 8th April, 1951, has been used to calculate the rates (relating to 1953) for the country as a whole. The rates for the various divisions of the country have also been based on the estimated home population as at 30th June, 1953.

Table A gives the population figures, as estimated at 30th June, 1953, for Counties and County Boroughs, together with the aggregates of the urban and rural areas. The populations as ascertained at the censuses of 1911, 1926, 1937 and 1951 are also shown. The 1951 census populations for each Local Administrative Area are given in Abstract X.

Table A1 shows the age and sex distribution of the population as at 30th June, 1953, also the percentage of the total population in each age-group. Abstract XI gives the 1951 Census population by age and sex for Northern Ireland also for the Counties and County Boroughs.

TABLE A.—Populations of Counties, County Boroughs and Urban and Rural Areas as recorded at the censuses of 1911, 1926, 1937 and 1951, and as estimated at mid-year, 1953.

MARRIAGES

Number and Rate.—Marriages registered during the year numbered 9,416 which is 116 more than the previous year. The rate 6.80 per 1,000 of the estimated population is 0.03 above that for the year 1952. Of the total marriages 94.4 per cent. were between bachelors and spinsters, 3.1 per

cent. between widowers and spinsters, 1.4 per cent between bachelors and widows and 1.1 per cent. between widowers and widows. Thus 4.2 per cent. of the men married during the year were widowers and 2.5 per cent. of the women were widows or, in 6 out of every 100 marriages, one or both of the contracting parties had been married before. It should be noted that for the purpose of these calculations, divorced men and women who marry are included with bachelors and spinsters respectively.

Ages at Marriage.—The average age of men marrying in 1953 was 29.5 and of women 26.2. During 1952 this age was 29.8 among men, whilst that for women is unchanged. Of the contracting parties 5.6 per cent. of the husbands and 19.8 per cent. of the wives were minors. Further statistics will be found in Abstracts III, IV and V.

Method of Celebration.—Table E shows for Northern Ireland the marriages registered during the years 1927, 1937 and 1948 to 1953 according to methods of celebration. The religious denominations are placed in the order of the number of members at the last Census.

Marriages taking place in Registrars' Offices in the year under review represented 7.0 per cent. of the total marriages as compared with 7.3 in the previous year and 6.7 per cent. in 1930.

† Provisional.

BIRTHS

Number and Rate.—The births registered during the year numbered 28,984, an increase of 224 as compared with the previous year. The birth rate was 20.9 per 1,000 of the estimated population, being unchanged from the rate for the previous year. Illegitimate births numbered 818, a decrease of 141 as compared with the number recorded for 1952, the proportion to total births (2.82 per cent.) being 0.51 below that for the previous year. In England and Wales, Scotland and the Irish Republic, the illegitimate births as percentages of the total births in the year 1953 were 4.7, 4.7 and 2.1 respectively. The figure for the Irish Republic is provisional.

* Excluding County Borough.

Proportion of Males to Females.—Births of males in Northern Ireland in 1953 numbered 15,039 and those of females 13,945 ; the proportion of male to female births was therefore 1,078 to 1,000. The corresponding proportions for each of the years 1948-52 were 1,070, 1,067, 1,073, 1,058, and 1,067 respectively.

Multiple Births.—Of the 28,984 children whose births were registered during the year, 28,187 were born singly, 788 children were twins, and 9 were triplets. Thus, there were 394 births of twins and 3 of triplets during 1953, compared with 371 and 3 respectively during 1952. Still-births not being registered in Northern Ireland, a birth of one live child and one still-born child is regarded as a single birth, a birth of two live children and one still-born child as a twin birth.

DIAGRAM II.--Birth Rates in Northern Ireland, England and Wales, Scotland and the Irish Republic, 1928-53.
Rate per 1,000 Population.

DEATHS

Number and Rate.—The number of deaths recorded during the year 1953, and the death rate per 1,000 of the population, were 14,813 and 10.7 respectively. The comparative figures for 1952 were 14,812 and 10.8.

Of the total deaths, 7,670 were of males and 7,143 were of females, the equivalent annual death rates being 11.4 and 10.1 per 1,000 of the male and female estimated populations, respectively. These rates are unchanged from those recorded for 1952.

According to the ages stated to Registrars, 8.4 per cent. of the total deaths were of children under 5 years of age and 62.9 per cent. were of persons aged 65 and upwards. There were 87 deaths of persons (30 males and 57 females) aged 95 and upwards; 11 of these deaths (3 males and 8 females) were of persons whose ages at death were returned as 100 years and upwards. The ages of the males were given as 102, 103 and 105, and the ages of the females were given as 3 at 100, 1 at 101, 3 at 102 and 1 at 104.

Deaths in Hospitals.—The number of deaths occurring in hospitals in each of the years 1944-53 is shown in Table H. 37.3 per cent. of the deaths registered in 1953 took place in hospitals (3.0 per cent. in mental hospitals), and the remaining 62.7 per cent. occurred in the deceased person's own home, in private nursing homes, or in places other than hospitals. The percentage of deaths which took place in hospitals in 1924 was 17.0.

DIAGRAM III.—Death Rates in Northern Ireland, England and Wales, Scotland and the Irish Republic, 1928-53
Rate per 1,000 Population

Proportion of Deaths from the Principal Causes.—Abstract XIII shows the deaths from the principal causes as proportions per 1,000 of the total deaths in certain age groups. It will be seen from this abstract that, for all ages taken together, heart disease bears the greatest proportion to the total deaths, which is the usual experience ; and that the deaths from this cause occur mainly among persons of fairly advanced ages. The proportions were high also for cancer, vascular lesions affecting central nervous system, pneumonia, bronchitis and tuberculosis.

At ages under one year, apart from premature birth and congenital malformations, the highest proportions of deaths were caused by pneumonia, birth injuries, etc., and diarrhoea.

Between the ages of one and ten the highest proportions were caused by motor vehicle and other accidents, malignant diseases, pneumonia and bronchitis, congenital malformations and tuberculosis of the central nervous system.

Between the ages of ten and thirty-five, motor vehicle and other accidents caused by far the largest proportions of deaths. The proportions from heart diseases, tuberculosis and cancer were also high.

From age thirty-five onwards, heart disease, cancer, vascular lesions affecting central nervous system, tuberculosis, bronchitis, pneumonia, nephritis and diseases of the digestive system were responsible for the largest proportions of the total mortality.

Table J shows for each of the principal causes the numbers of deaths and the death rates for each year since 1950.

Deaths from the Principal Epidemic Diseases.—The diseases included in this group are typhoid and paratyphoid fever, scarlet fever, whooping cough, diphtheria and dysentery, influenza, smallpox, measles, typhus and diarrhoeal diseases of children under 2 years of age. The total number of such deaths was 245 giving a rate of 0.18 per 1,000 population, the corresponding figures for 1952 being 169 and 0.12 respectively.

The increase is mostly due to deaths from influenza, particulars of which are given below, and to the deaths of children under two years of age from diarrhoea and enteritis. Deaths of children from diarrhoeal diseases numbered 107, as compared with 73 in 1952 and 87 in 1951. It should be noted that except for 1953 there has been more or less a continuous decline in mortality from this disease since 1944 when 310 deaths were recorded. One death was returned from diphtheria, compared with none in 1952, 2 in 1951 and 6 in 1950. In 1941, 133 deaths were ascribed to this disease.

The majority of the remaining diseases in this group show decreases when compared with the figures for 1952. The decreases are most marked in connection with whooping cough and measles.

The notifications of certain infectious diseases for each District in Northern Ireland for the year 1953 are shown in Abstract XXI, and the diseases named are those laid down by Regulations (issued by the Ministry of Health and Local Government) as compulsorily notifiable throughout Northern Ireland. The Abstract does not include certain diseases of which no cases were notified during the year. It should be noted that, as regards measles and whooping cough, only the first case of either of these diseases in a household during each outbreak is required to be notified, unless a period of 2 months intervenes in the case of the former disease and 3 months in the case of the latter.

Influenza.—Deaths from influenza numbered 117 representing a rate of 0.08 per 1,000 population as compared with figures of 61 deaths and a rate of 0.04 in 1952. As is usually the case, mortality from this disease was the highest in the first quarter of the year.

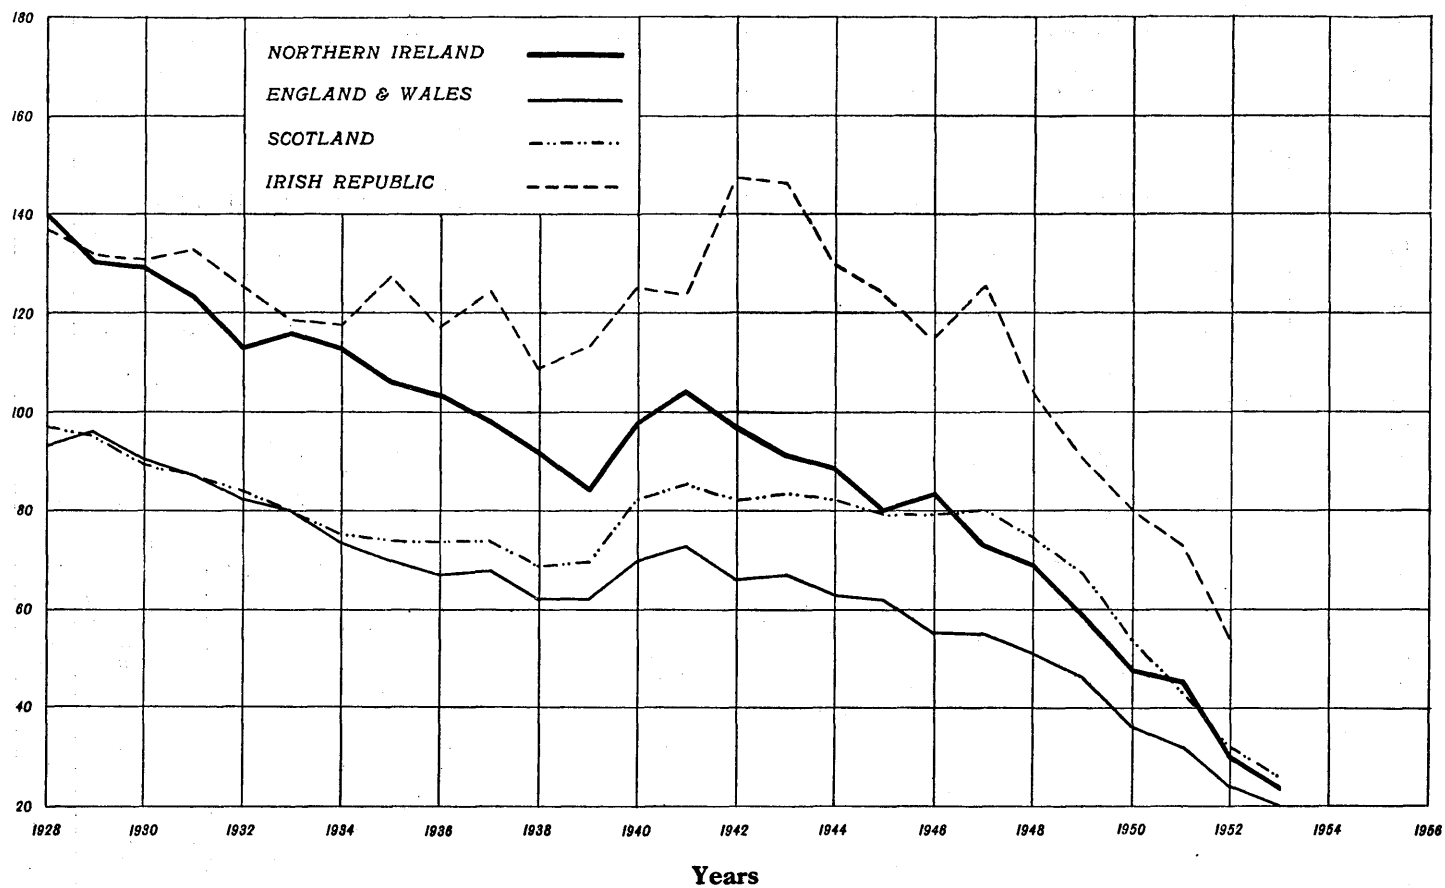

Tuberculosis.—The death rate from this cause was 0.23 per 1,000 of the population as against 0.30 in 1952 and the average rate of 0.50 for the five years 1948-52. The death rate for 1953 is the lowest ever recorded, the next lowest being that for 1952. Diagram IV shows that the death rate in Northern Ireland from all forms of tuberculosis has declined very steadily since 1928. The only break in the general trend of improvement occurs during the period covered by the war years, and it will be noticed from the diagram that this rise was experienced in all other parts of the British Isles. The corresponding rates for England and Wales, Scotland and the Irish Republic in 1953 were 0.20, 0.26, and 0.40 respectively. The rate for the Irish Republic is provisional

From Abstract XIII it will be seen that tuberculous diseases have caused 131 deaths in every 1,000 between the ages of 15 and 25, and 182 per 1,000 between 25 and 35. Further, from Abstract VIII it appears that 25 per cent. of the deaths from all forms of tuberculous disease during 1953 occurred between the ages of 15 and 35, as compared with 27 per cent. in 1952.

DIAGRAM IV.—Death Rates from Tuberculosis in Northern Ireland, England and Wales, Scotland and the Irish Republic, 1928-53.
Rate per 100,000 Population.

Tuberculosis is in general more prevalent in the cities and towns than in the country districts. In 1953 the rate per 1,000 of the population for all urban areas was 0.27 and for rural areas 0.18. The rates in 1952 were 0.36 and 0.23 respectively.

Tuberculosis of the respiratory system accounted for 81.3 per cent. of the total deaths from tuberculosis, as compared with 79.3 per cent. in 1952.

1953	0.22	0.27	0.29	0.23	0.15	0.10	0.18	0.14

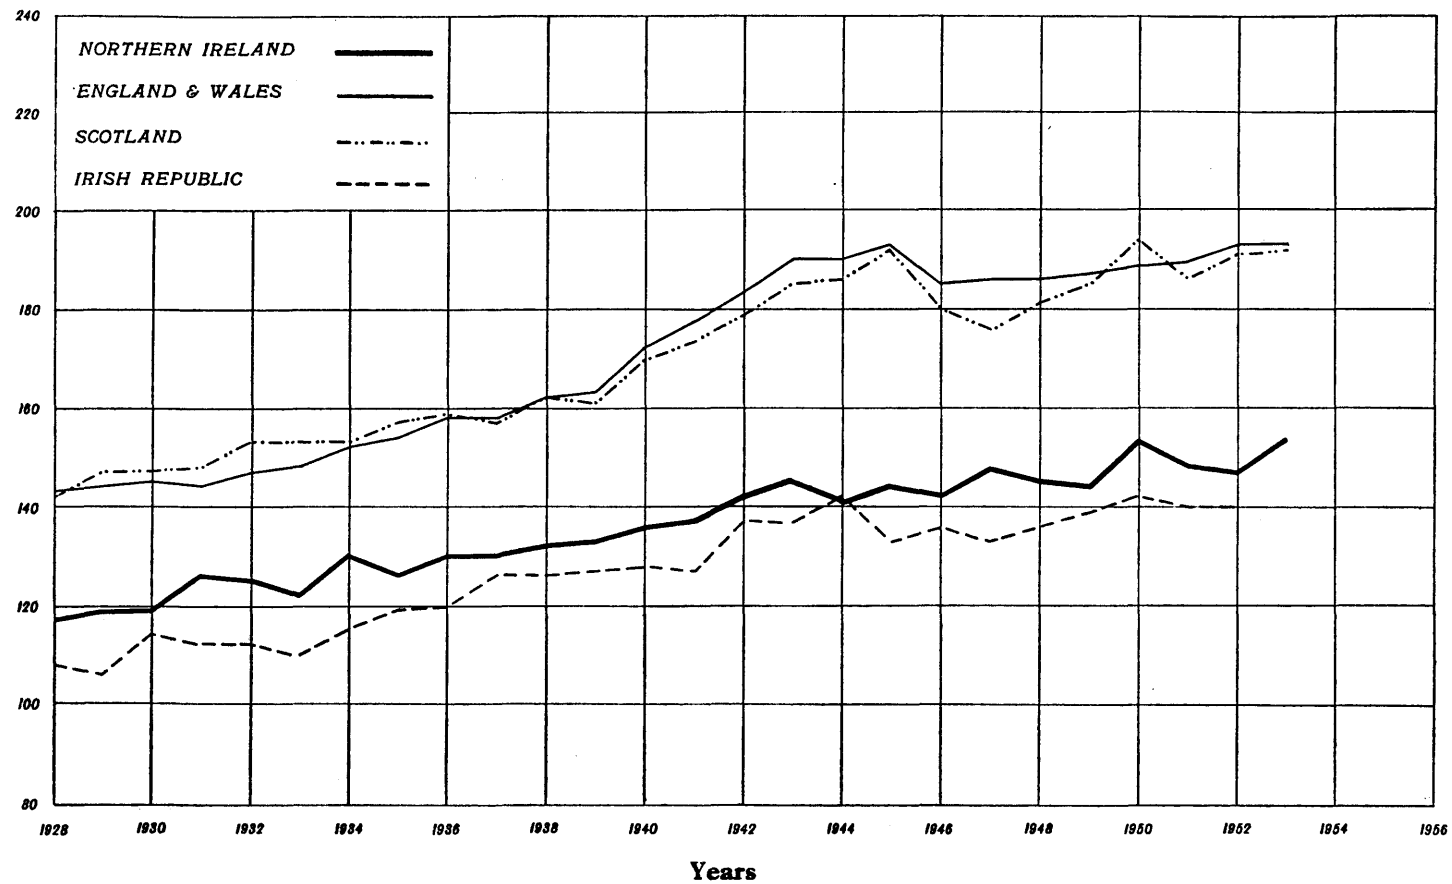

The Abstracts of causes of death give particulars regarding the sexes and ages of the persons who died from the various forms of tuberculous disease during the year, and also the deaths from tuberculosis allocated to each county and to each administrative area in Northern Ireland.

Table K affords comparison of the summarised figures for 1953 with those for certain preceding years. Table L shows comparisons of the summarised figures for each of the six counties of Northern Ireland and Belfast and Londonderry County Boroughs.

Cancer.—The number of deaths from cancer in Northern Ireland during 1953 was 2,125, giving a death rate of 1.54 per 1,000 of the population, which is 0.07 above the rate for 1952 and the average rate for the previous five years. From Diagram V. it can be seen that the general tendency has been for this rate to show a more or less steady increase.

Diagram VI compares the death rates from tuberculosis and cancer ; and from this it can be seen that, prior to 1931, tuberculosis accounted for a greater number of deaths, whereas since that date cancer has proved the more dangerous.

DIAGRAM V.—Death Rates from Cancer in Northern Ireland, England and Wales, Scotland and the Irish Republic, 1928-1953.
Rate per 100,000 Population.

The death rates from cancer among males and females were 1.55 and 1.52 respectively. In 1952 the male and female rates were 1.52 and 1.42 respectively.

The most frequent sites of fatal cancer among males during the year were stomach, 218 ; trachea, bronchus and lungs, 185 ; intestines, 105 ; prostate, 85 ; rectum, 78 ; pancreas, 51 ; and oesophagus, 36. Among females the most frequent sites were stomach, 209 ; breast, 164 ; intestines, 143 ; uterus, 115 ; rectum, 49 ; pancreas, 48 ; and trachea, bronchus and lungs, 45.

Abstract XIV gives particulars regarding sex, age and sites of fatal cancer during the year 1953. Whilst Abstract XV shows the number of deaths, by sex and site, in each County and County Borough.

1952 ..	1,015	1.52	1,005	1.42	2,020	1.47
1953 ..	1,049	1.55	1,076	1.52	2,125	1.54

Cerebral Haemorrhage, Apoplexy, etc.—The deaths assigned to this group (now described as “Vascular lesions affecting central nervous system”) numbered 1,926, giving a rate of 1.39 per 1,000 of the population. This rate is 0.01 below that for 1952, and is 0.09 above the average rate for the period 1948-52.

Heart Disease.—The deaths from the various forms of heart disease during the year numbered 4,811, the rate per 1,000 of the population being 3.48, which is 0.04 below that for the previous year. The average rate for the quinquennium 1948-52 was 3.57. The death rate from this disease has been more or less steadily increasing over a number of years.

TABLE N.—*Northern Ireland : Deaths and Death Rates from Heart Disease (All Forms), 1926, 1937 and 1948-53.*

YEAR	MALES		FEMALES		TOTAL	
	Number of Deaths	Rate per 1,000 of the estimated Male population	Number of Deaths	Rate per 1,000 of the estimated Female population	Number of Deaths	Rate per 1,000 of the estimated population
1926 ..	1,241	2.04	1,437	2.22	2,678	2.14
1937 ..	1,885	3.02	1,815	2.76	3,700	2.89

1951 ..	2,785	4.16	2,722	3.87	5,507	4.01
1952 ..	2,551	3.81	2,291	3.25	4,842	3.52
1953 ..	2,525	3.74	2,286	3.22	4,811	3.48

Bronchitis.—The deaths from bronchitis during the year numbered 420, giving a rate of 0.30 per 1,000 of the population, which is 0.01 above the rate of 1952.

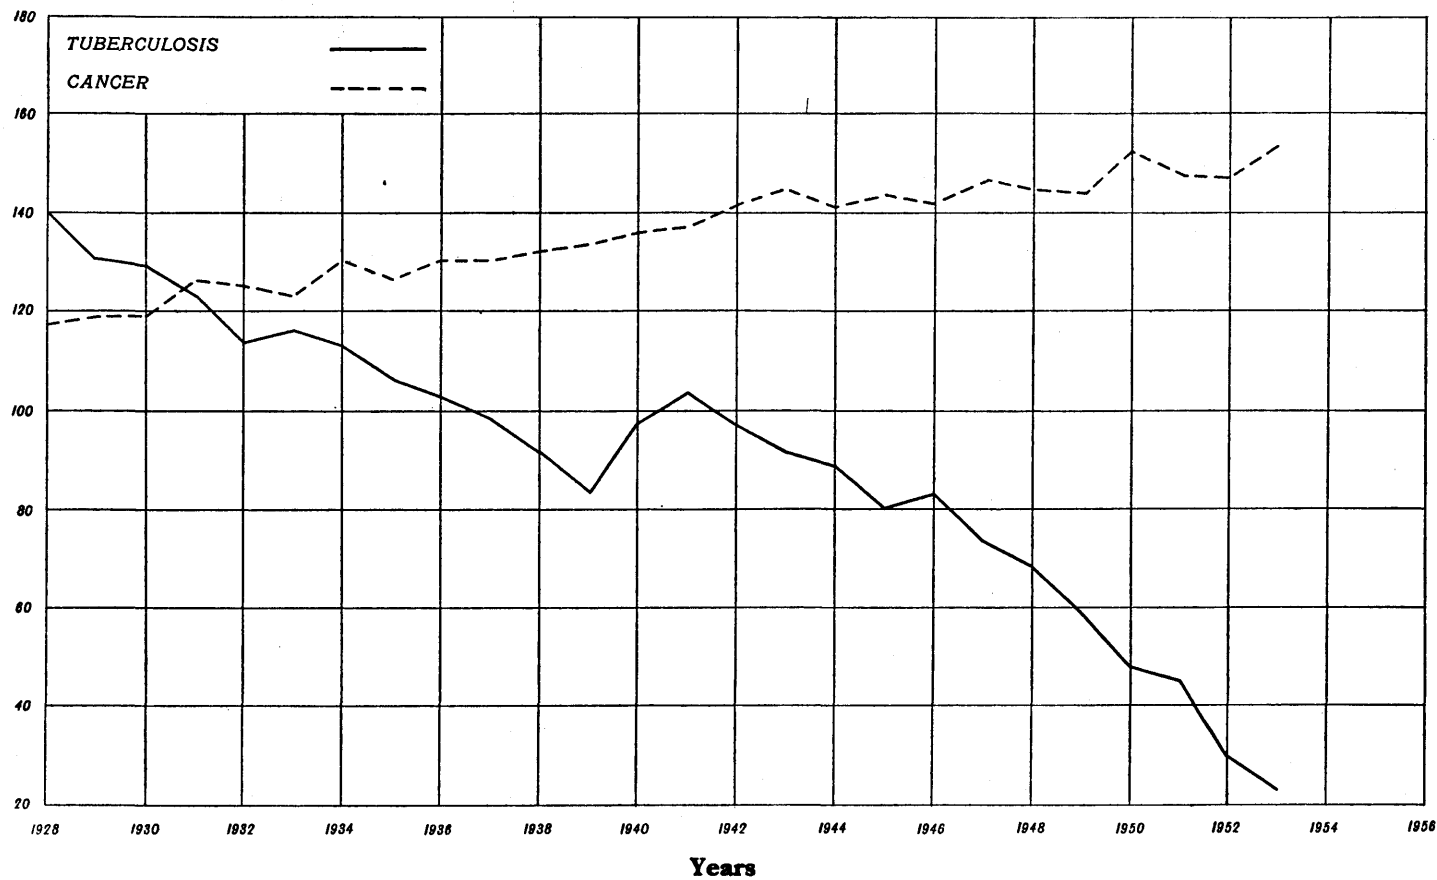

Pneumonia.—It should be noted that in the various tables and abstracts deaths from pneumonia are included under two headings. The general heading "Pneumonia" includes deaths of all persons aged over four weeks, and the heading "Infections of the Newborn" includes deaths from pneumonia of children under four weeks old.

Total deaths from pneumonia (under both headings) numbered 610 during the year 1953, the rate per 1,000 of the population being 0.44, compared with a rate of 0.43 in 1952. The rate for 1953 is 0.4 below the average rate for the five preceding years.

TABLE O.—*Northern Ireland : Deaths of Women in Pregnancy and Childbirth, 1953.*

DIAGRAM VI.—Death Rates from Tuberculosis and Cancer in Northern Ireland, 1928-1953.
Rate per 100,000 Population.

Pregnancy and Childbirth.—The mortality of women during pregnancy and childbirth is classified under two headings, namely — (1) diseases of pregnancy, childbirth and puerperal state, and (2) diseases or causes combined with pregnancy or childbirth. The causes of death shown in Table O are those to which the various deaths were assigned.

From Table P it will be seen that the deaths from diseases of pregnancy, childbirth and the puerperal state in 1953 yielded a rate of 0.59 per 1,000 live births, which is a decrease of 0.49 as compared with the rate for 1952. The rate for 1953 is the lowest on record. The next lowest rate (1.08) was that recorded for 1952.

The rate for diseases combined with pregnancy and childbirth decreased from 0.38 in 1952 to 0.14 in the year under review.

DIAGRAM VII.—Maternal Mortality Rates in Northern Ireland, England and Wales, Scotland and the Irish Republic, 1928-53
Rate per 1,000 Live births.

Violent Deaths.—Deaths from violence are now classified according to both the external circumstances giving rise to injury, expressed as the “External Cause of Injury”, and to the nature of the injury sustained, designated as the “Nature of Injury.” Tables R and S show the number of deaths from Violence by the “External Cause of Injury” and “Nature of Injury” respectively.

The number of deaths ascribed to violence during the year was 631 (411 males and 220 females), which is an increase of 161 on the number registered for 1952, and is equivalent to 4.3 per cent. of the total deaths registered. This increase in the number of deaths from violence is mainly due to the fact that most of the bodies recovered from the M.V *Princess Victoria* which foundered in the North Channel on 31st January, 1953, were brought to Northern Ireland ports.

Of these 631 deaths, 189 were attributed to transport accidents (excluding sea transport) of which 149 were due to road traffic accidents, as compared with 140 in 1952. The following figures afford comparison of deaths from road traffic accidents in 1953 with those for the three preceding years by sex and certain age-periods.

Deaths from Road Transport Accidents

				All ages	Under 5 years	5-14	15-34	35-54	55-74	75 and over
MALES	1950	108	9	14	23	26	24	12
			1951	137	13	20	41	21	28	14
			1952	112	10	16	28	21	27	10
			1953	119	8	15	38	23	20	15
FEMALES	1950	36	5	2	6	3	16	4
			1951	40	11	6	4	4	11	4
			1952	28	6	—	6	6	8	2
			1953	30	8	5	2	3	10	2

Male deaths caused by transport accidents greatly exceed those of females: on average mortality is heaviest in the age groups 15-34; 55-74 and 35-54 in the case of males and 55-74 and under 5 in the case of females.

Other fatal accidents accounted for 387 deaths, of these 127 were from drowning—of which 86 were victims of the *Princess Victoria* disaster—and included 9 cases, 3 males and 6 females, in which the Coroners returned verdicts of found drowned. Of the remaining deaths in this group 135 were ascribed to falls, 36 to fire, 19 to mechanical suffocation, 17 to poisons and poisonous gases, 3 to machinery, 3 to firearms and 47 to other accidental causes.

During the year there were 46 cases of suicide (32 males and 14 females), 8 of homicide and 1 death due to late effects of operations of war.

Of the 35 deaths from burns and scalds shown in Table S, 6 were of children under 5 years of age.

TOTAL DEATHS ..	530	554	470	631	411	220

Uncertified Deaths.—The deaths registered as uncertified, i.e., those in which there was neither a medical attendant during the last illness nor an inquest held by a coroner, numbered 193, representing 1.3 per cent. of the total deaths registered. The percentage of uncertified deaths has been falling rapidly during the past twenty years. In 1930 uncertified deaths represented 8.7 per cent. of the total deaths.

Of the total deaths in rural areas 108, or 1.5 per cent., were uncertified ; in urban areas the number was 85, or 1.1 per cent.

Table T shows the number of uncertified deaths in each County and County Borough, distinguishing between those referred to Coroners in respect of which inquests were considered unnecessary, and those not referred to Coroners.

Deaths of persons aged 65 years and upwards represented 61.1 per cent. of the uncertified cases, and deaths of infants under 1 year of age 7.3 per cent.

TABLE T.—*Northern Ireland : Certified and Uncertified Deaths : Inquests, 1953.*

Counties, etc	Total Deaths	Certified			Uncertified	
		By Medical Practitioners		By Coroners after Inquest	Not referred to Coroners	Referred to Coroners Inquest considered unnecessary

*Excluding County Borough.

Inquests.—The circumstances of 881 deaths were considered by the Coroners in 1953, including 142 of the uncertified deaths referred to in the previous paragraph. Inquests were held in 586 of these cases, which represents one inquest for every 25 deaths registered. In 1952 the inquests numbered 454.

Infant Mortality.—In the text and tables the term “Neo-natal Mortality” relates to deaths of children under 4 weeks of age, and the term “Infant Mortality” to deaths of all children (including Neo-natal) under 1 year of age.

Deaths of infants under 1 year of age numbered 1,090, or 38 per 1,000 live births registered. This rate is the lowest ever recorded in Northern Ireland, and it shows a decrease of 4 when compared with the average rate for the previous 5 years. Of the 1,090 deaths of infants under 1 year of age, 652 were of males and 438 of females, the former number being equivalent to 43 per 1,000 live births of males and the latter to 31 per 1,000 live births of females. The corresponding rates for 1952 were 45 and 32 respectively.

TABLE U.—*Northern Ireland : Neo-natal and infant Mortality Rates per 1,000 Live Births by Counties, 1950-1953.*

*Excluding County Borough.

The infant mortality rate for the aggregate of the Urban Districts of Northern Ireland in 1953 was 41 per 1,000 live births, and the rate for the aggregate of the Rural Districts was 34 per 1,000, the corresponding rates for 1952 being 44 and 34 respectively.

In 1953 and 1952 the rates of deaths of infants under 1 year of age were 27 and 28 per 1,000 live births, respectively, for England and Wales ; 31 and 35 for Scotland ; and 39 and 41 for the Irish Republic. The rate for the Irish Republic for 1953 is provisional.

Deaths of infants aged under 4 weeks (" neo-natal " mortality) numbered 622, representing a rate of 21 per 1,000 live births, and is equivalent to 57.1 per cent. of all deaths of children under 1 year of age. The corresponding figures for 1952 were 672, 23 and 60.2 per cent. respectively.

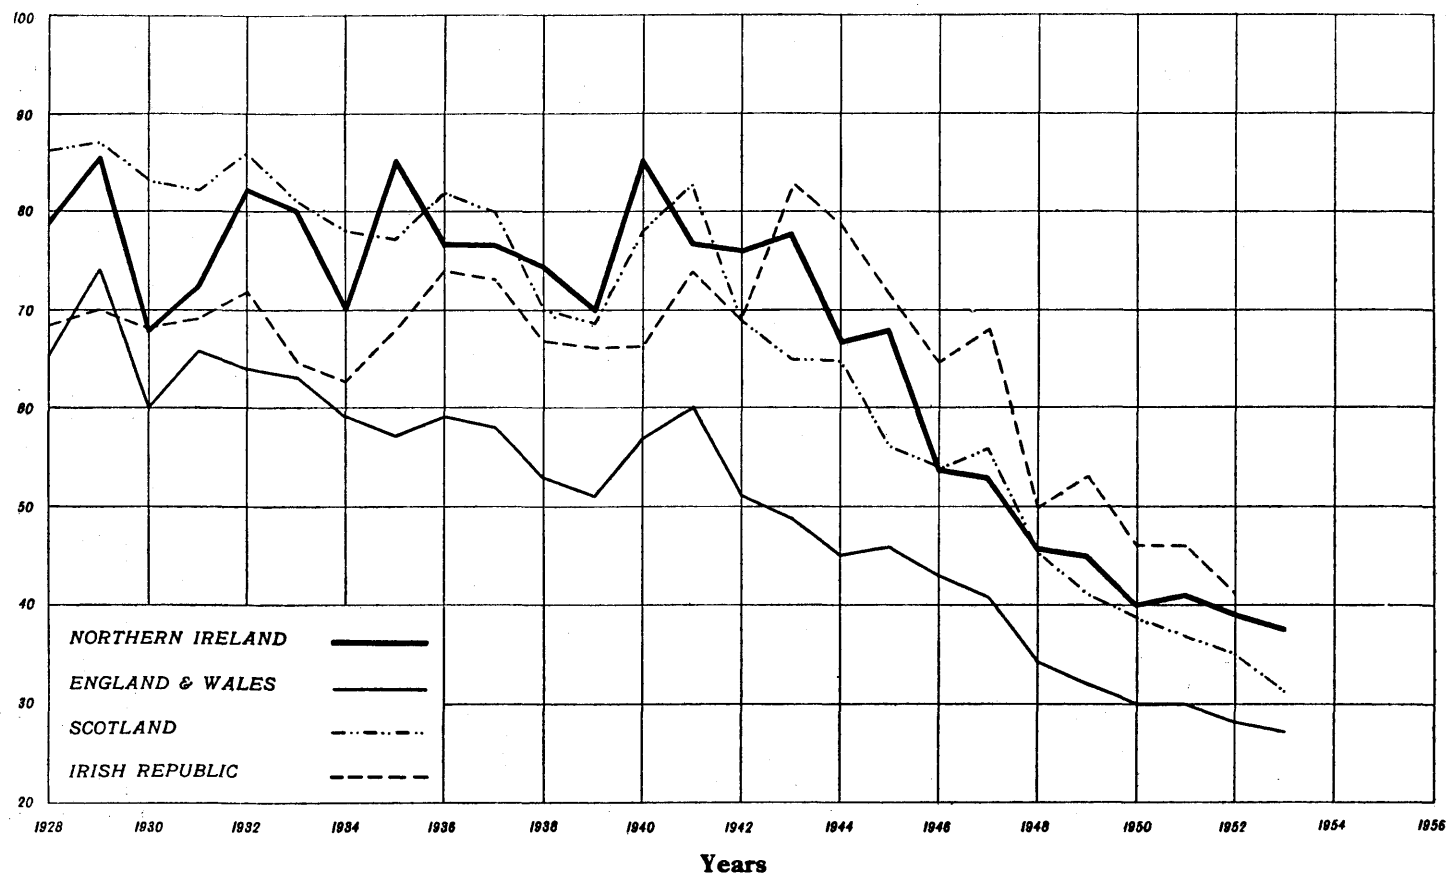

TABLE V.—*Infant Mortality Rates for Belfast Co. Borough and Londonderry Co. Borough with comparative Rates for Towns of approximately the same Populations in Great Britain, 1953.*

Town	Population	Deaths of Infants under 1 year of Age per 1,000 Live Births	Birth Rate per 1,000 Population
BELFAST	450,800	45	18.9
Bristol	444,200	22	15.7
Leeds	505,500	33	15.8
Sheffield	507,600	26	13.9
Edinburgh	470,800	24	15.4
LONDONDERRY	50,300	44	28.1
Burton-on Trent	48,820	28	17.6
Dewsbury	52,990	39	16.9
Crewe	52,150	35	15.6
Shrewsbury	46,230	29	15.6
Lancaster	50,330	32	15.1
Ayr	42,400	34	16.8
Kirkcaldy	50,100	29	16.8

NOTE—The populations are as estimated at mid-year, 1953.

In Table V the infant mortality rates and birth rates for Belfast and Londonderry County Boroughs are compared with those for towns of approximately the same populations in Great Britain. Whilst the infant mortality rates for these Northern Ireland towns do not yet compare favourably with those for cross-channel towns of comparable size, there has been an immense reduction since 1942 when the rates were : Belfast 92, Londonderry 90.

DIAGRAM VIII.—Infant Mortality Rates in Northern Ireland, England and Wales, Scotland and the Irish Republic, 1928-53.
Rate per 1,000 Live Births.

Abstract XVIII gives the number of deaths of children under 1 year of age for Northern Ireland by Counties and County Boroughs (also for the aggregates of the urban and rural areas) for the years 1950-53. For the last of these years the numbers are given by sexes and age-periods.

The numbers of infant deaths for 1953 by age and causes of death are given in Abstract XVII, together with the numbers by causes for the years 1950-52. The infant mortality rates by causes are also given for the four years 1950-53.

Abstract X gives the number of infant deaths, together with the number of births, for each administrative area in Northern Ireland.

Mortality among Illegitimate Children.—Deaths of Illegitimate children under 1 year of age numbered 56 in 1953, which is equivalent to a rate of 68 per 1,000 of the illegitimate live births registered, as compared with a rate of 56 for the previous year. The corresponding rates for legitimate children in 1953 and 1952 were 37 and 38 per 1,000 live births respectively.

County Tyrone ..	45	9	45	36	53	27	76	91

*Excluding County Borough.

Deaths of illegitimate infants aged under 4 weeks (illegitimate neo-natal mortality) numbered 16, representing 28.6 per cent of the total deaths of all illegitimate children under 1 year of age. The corresponding figures for 1952 were 36 and 66.7 per cent. respectively.

Abstract XX gives the numbers of deaths of illegitimate children under 1 year of age by the principal causes and by age-periods in 1953, together with the numbers by causes for the years 1950-52. The mortality rates by causes are also shown for the four years 1950-53. Most of these rates are considerably in excess of the corresponding rates for all children ; particularly the rates for diarrhoea and enteritis, pneumonia and influenza. It should, however, be noted that the rates for some of the causes are based on very small numbers of deaths.

Abstract XIX shows the number of deaths of illegitimate children under 1 year of age for Northern Ireland by Counties and County Boroughs, also for the aggregates of the urban and rural areas, for the years 1950-53. The sex and age distribution is shown for the year 1953.

MIGRATION

The population figures ascertained at each Census enable the net migration during the inter-Censal periods to be calculated. The last two Censuses in Northern Ireland were taken on 28th February, 1937, and 8th April, 1951. The following statement reveals that, during the intervening period of a little over 14 years, there was a net outward movement of 67,267 persons. Gross figures for migration inwards and outwards are not available. The table relates to migration to and from all countries, including other parts of the British Isles.

	Males	Females	Total
Population, Census of 1937	623,154	656,591	1,279,745
Births, 1937-51	207,270	194,914	402,184
Deaths, 1937-51	122,452	121,289	243,741
Natural Increase	84,818	73,625	158,443
Population 1937 plus Natural Increase	707,972	730,216	1,438,188
Population, Census of 1951	667,819	703,102	1,370,921
Net movement outwards	40,153	27,114	67,267

The term "natural increase" represents the excess of births over deaths. The net movement outwards during the two inter-Censal periods immediately preceding the Census of 1937 amounted to : 1911-26, 107,573 persons, and 1926-37, 57,651 persons.

According to returns furnished by the Board of Trade (Statistics Division), and the Central Statistics Office of the Irish Republic the number of emigrants of British nationality from Northern Ireland to countries outside Europe during 1953 was 6,300, and the number of immigrants arriving in Northern Ireland from those countries was 1,152. The following table gives the Board of Trade figures for the years 1936 to 1952, with the exception of the period 1939-1945, during which records were not maintained.

Year	Emigrants	Immigrants	Outward (—) or Inward (+) Balance
1936	655	1,273	+ 618
1937	835	1,011	+ 176
1938	844	1,102	+ 258
1946	2,878	978	—1,900
1947	1,941	787	—1,154
1948	3,300	796	—2,504
1949	3,259	868	—2,391
1950	3,370	951	—2,419
1951	3,048	1,042	—2,006
1952	4,772	1,008	—3,764
1953	6,300	1,152	—5,148

THE WEATHER

Reports on the weather experienced in Northern Ireland during each month of the year 1953, as furnished by the Director of the Meteorological Office, England, are published in the Quarterly Returns of Births, Deaths, and Marriages for that year. Table X shows for the stations of Armagh, Garvagh and Aldergrove the Average Air Temperature, Rainfall, and Sunshine in 1953.

The year 1953 was very dry, with mean temperatures somewhat above average and sunshine slightly below average. May, September, November and December were very mild, the combined mean temperatures for the last two months being notably high. Rainfall was markedly low ; apart from 1933,

1953 was the driest year since comparable records are available, that is since 1920. The only months with more than average rainfall were July and September ; the first three months were very dry, particularly March. The spring months March to May inclusive were sunnier than usual, while June's total equalled its average and the remaining months were rather dull, particularly September to December.

January was very dry and rather dull, with mean temperature about average. It was the driest January since comparable records are available, namely 1920. The first eight days were cold and it was cold again from the 18th to the 21st ; the intervening periods were mainly mild, particularly the 11th, 12th, 15th and 27th-30th. *February* was very dry and rather dull ; it was cold during the first half of the month with hard frost at times, and very mild in the second half. Snow or sleet occurred at times, chiefly on the 8th to 11th. For the third successive month the weather of *March* was exceptionally dry, the percentage of the average being only 19. The month was also notable for exceptionally high mean pressure, the highest for March this century. The weather was quiet, with frequent fog at night and in the morning. The duration of bright sunshine was above average ; broadly speaking, the first half of the month was dull and the second half very sunny. *April* was cool, sunny and rather dry in most places. The only really warm days occurred from the 21st to the 23rd. Early morning air frosts were frequent for the time of year and ground frosts occurred on numerous occasions at some inland stations. It was dry in most parts from the 4th to 9th and a dry period occurred from the 17th to 24th ; rain fell frequently in the intervening periods. Among the sunniest days were the 7th, 14th, 19th-23rd and 30th. The weather of *May* was warm and rather sunny, with rainfall below the average except in the west and extreme south-east of the Province. Temperature rose to 75°F. locally on the 5th and 6th. A severe thunderstorm occurred on the night of the 24th-25th ; at Ballykelly 2.34 in. of rain fell in the 24 hours ending at 9h. on 25th. The period 1st-12th was very sunny. *June* was rather dry on the whole, though the rainfall distribution was variable. It was cold at first, particularly from the 2nd to the 4th, a maximum of only 50°F. being registered at Lisburn on the 2nd Castle Archdale on the 3rd, but from the 22nd to 30th it was warm, temperature rising to 78°F. at Castle Archdale on the 30th. Thunderstorms occurred on the 25th and 26th.

July was unsettled, wet and rather cool. This was the first month in 1953 in which the general rainfall exceeded the average ; the total for the first seven months was about 5½ inches below the average amount for that period. The first four days were mainly dry but rain or showers were frequent during the rest of the month ; thunderstorms occurred at times, chiefly on the 16th, 17th, 21st, 22nd, 26th and 27th. *August* was, generally speaking, dry until the 13th ; subsequently, unsettled conditions prevailed for the most part, with frequent rain or showers. Mean temperatures very slightly exceeded the average ; on the whole the first fortnight was rather warm and the latter half of the month rather cool. *September* was rather wet on the whole, warm and mainly dull. The unsettled weather of late August lasted into the first few days of September, with winds reaching gale force on the 2nd. Subsequently mainly dry weather prevailed until the 13th, though small amounts of rain occurred at times between the 9th and 12th. The weather during the remainder of the month was changeable with heavy rain locally at times. The warmest period occurred from the 5th to the 8th. The weather of *October* was dry and rather dull. A widespread gale occurred on the 26th, with a gust of 60 kt. at Aldergrove. There was little rainfall up to the 19th

* Sunshine recorded at Hillsborough.

NOTE—In this table the rainfall average is that for the period 1881–1915: the air temperature and sunshine average relate to the period 1921–50.

but from the 20th onward rain or showers occurred rather frequently. *November* was dull and very mild on the whole. The first 10 days were rather cool but the rest of the month was mainly very mild for the time of year. Rain or showers occurred rather frequently from the 1st to the 15th and again from the 22nd onward, the intermediate period being mainly dry. Among the heavier daily falls were 1.46 in. at Castle Archdale and 1.36 in. at Hillsborough on the 1st. *December* was dull and unusually mild with prevailing winds from some southerly point. There were short breaks in the very mild weather, for example on the 4th-5th, 15th-16th and 19th-20th and somewhat colder weather set in on the 24th and persisted until the end of the month; keen frost occurred locally on the 5th. Heavy rain on the 2nd and 3rd caused local flooding; 2.22 in. was registered at Kilkeel on the 3rd.

The table below gives the monthly and annual deviation from the average mean temperature in degrees Fahrenheit and the monthly and annual rainfall and sunshine expressed as percentages of the average.

	Jan.	Feb.	Mar.	April	May	June	July	Aug.	Sept.	Oct.	Nov.	Dec.	Year

GENERAL

The figures contained in this Report may be regarded as final, and as superseding the provisional figures already published for the year 1953 in the Registrar-General's weekly and quarterly returns. It should be noted that statistics of deaths for years 1941-1949 relate to civilians only.

The value of the statistical information concerning deaths contained in the Registrar-General's Annual Reports and other publications is to a large extent dependent on the degree of care and accuracy with which the members of the medical profession enter the required particulars on the form of medical certificate of the cause of death. The particulars so given are incorporated in the death entries, and thus in every case in which a person had been attended in his or her last illness by a medical practitioner, the medical certificate given by the latter forms the basis upon which the cause of death is classified.

Comparisons with rates (births, deaths, etc.) recorded in other parts of the British Isles are included in several tables and diagrams. These comparisons are substantially correct but, owing to changes in the mode of computing population figures in certain countries in certain years, complete accuracy has not been achieved. The figures shown for the Irish Republic in respect of the year 1953 are provisional.

For the purposes of this Report the classifications adopted are the Intermediate and Abbreviated Lists contained in the "Manual of the International Statistical Classifications of Diseases, Injuries and Causes of Death, 1948."

Abstract VIII shows the deaths classified under the headings of the Intermediate List (slightly modified in the cases of neoplasms, certain diseases of early infancy and diseases of pregnancy, etc.), whilst the causes shown in Abstracts IX and XIII and certain tables in the text are in accordance with the Abbreviated List. The Detailed List numbers have also been given in Abstract VIII for the purpose of reference.

In general in the tables and abstracts, dots(.) are used to indicate "none," and dashes (—) are used to indicate that information cannot be given or that the headings are not applicable.

Throughout the Report, births and deaths have been allocated to the district of normal residence, births having been assigned to the districts containing the normal residence of the parents, and deaths to the districts containing the normal residence of the deceased persons.

ADMINISTRATION

Introductory.—The administrative functions of the office of the Registrar-General comprise the registration of births, deaths, marriages and adoptions, and the provision or supervision of machinery for dealing with preliminaries to marriages other than those according to the rites of the Roman Catholic Church.

Buildings licensed or registered for Marriages.—The numbers of places of worship (other than those belonging to the Roman Catholic Church) in which marriages could be solemnised, as at 31st December in each of the years 1951, 1952 and 1953 were as follows :—

DENOMINATION	1951	1952	1953
Church of Ireland	393	393	393
Presbyterian	500	501	502
Methodist	152	152	153
Others	210	222	227
TOTAL ..	1,255	1,268	1,275

State of Registration.—The measures adopted for particulars of births notified under the Notification of Births Act, 1907, to be furnished to Registrars in the two County Boroughs have continued to be of value in securing the registration of a number of births which had not been registered within the prescribed period of 6 weeks. In connection with the registration of deaths, returns of burials made to Registrars by Clerks of Burial Boards and Cemetery Companies have been of considerable assistance.

Births and deaths not registered within a year of their occurrence can be recorded only with the authority of the Registrar-General. During 1953 such authority was granted for the registration of 46 births, as compared with 39 in 1952 and 49 in 1951. The registration of 8 deaths was authorised as compared with 13 in 1952 and 7 in 1951.

Legitimacy Act (N.I.), 1928.—Under this Act an illegitimate child whose parents have married is, subject to certain conditions, legitimated, and the Registrar-General is empowered to authorise the re-registration of the birth. During 1953 the re-registration of the births of 109 children was authorised under the Act, the figures for 1952 and 1951 being 111 and 133 respectively.

Adoption of Children Act (N.I.), 1950.—Registers of children adopted under the provisions of the above Act and of the previous Adoption Act of 1929 are kept in the General Register Office, to which the Adoption Orders made by the Courts are communicated. A certified copy of an entry in an Adopted Children Register is evidence of adoption, and is also evidence of the date of birth of the adopted child. The children whose adoptions were recorded in the Adopted Children Registers during 1953 numbered 207, whilst the figures for 1952 and 1951 were 240 and 212 respectively.

Searches and Certificates.—The original records of births, deaths, and marriages registered in Northern Ireland are, in general, in the custody of local registration officers, who issue annually therefrom many thousands of certificates. An indication of the extent to which Government Departments and the public have utilised the facilities for searching in the indexes and obtaining certificates from records in the General Register Office for Northern Ireland (including the Adopted Children Register) is afforded by the following table :—

YEAR	Official		Paid			Fees Received
	Searches	Certificates	Searches	Certificates		
				Full	Short	
1927 ..	56	29	109	112	—	£ s. d. 19 9 0
1937 ..	94	88	363	290	—	55 2 0
1948 ..	160	158	1,745	1,654	1,309	326 14 6
1949 ..	194	193	1,836	1,756	1,182	340 17 0
1950 ..	244	243	1,562	1,520	1,144	296 14 0
1951 ..	222	220	1,683	1,609	1,270	317 0 6
1952 ..	170	168	1,819	1,796	1,298	347 18 0
1953 ..	114	114	1,926	1,961	1,454	377 15 6

Verifications.—Requests for the verification of particulars of events registered are received from Government Departments in connection with claims for Family Allowances, Pensions, etc. During the year the number of cases dealt with was 28,218, out of which 23,266 were checked from the records in this office and 4,952 events (where records were not available at headquarters) were referred to local officers.
