TO THE RIGHT HONOURABLE

HERBERT V. KIRK, B.COM.SC., F.C.A.,  
J.P., M.P.,

Minister of Finance for Northern Ireland

*Sir,*

*I have the honour to submit the Forty-fifth Annual Report on the Births, Still-births, Deaths, and Marriages registered in Northern Ireland, together with Abstracts of the particulars of such registrations. The Report relates to the year ended 31st December 1966. The Abstracts have been prepared for presentation to Parliament, pursuant to the provisions of statutes governing the registration system. The Report draws attention to the salient features of the vital statistics contained in the Abstracts, and information is given relating to notification of infectious diseases, congenital abnormalities, migration and the weather.*

*I have the honour to be, Sir,*

*Your obedient Servant,*

W. G. NICHOLL,

Registrar General of Births, Deaths, and  
Marriages for Northern Ireland

## GENERAL NOTES

---

The figures contained in this Report may be regarded as superseding the provisional figures already published for the year 1966 in the Registrar General's weekly and quarterly returns.

The value of the statistical information concerning deaths contained in the Registrar General's Annual Reports and other publications is to a large extent dependent on the degree of care and accuracy with which the members of the medical profession enter the required particulars on the form of medical certificate of the cause of death.

Throughout the Report, births and deaths have been recorded according to date of registration and not to date of occurrence. They have also been allocated to the district of normal residence, if in Northern Ireland, births having been assigned to the districts containing the normal residence of the parents, and deaths to the districts containing the normal residence of the deceased persons. Events occurring in Northern Ireland relating to persons whose normal residence is outside Northern Ireland have been assigned to the district of occurrence.

Rates are assessed per 1,000 of the estimated home population as at the 30th June unless otherwise stated. Marriage rates relate to the number of marriages solemnised, not to the number of persons married.

Comparisons with rates (births, deaths, etc.) recorded in other parts of the British Isles are included in several tables and diagrams. These comparisons are substantially correct but it should be remembered that (with the exception of Diagram 3) they are crude rates only and take no account of changes in or differences between the age and sex structure of the populations.

Generally speaking, the classifications adopted for the purposes of this Report are the Detailed and Abbreviated Lists contained in the "Manual of the International Statistical Classification of Diseases, Injuries and Causes of Death, 1955."

The term cancer, where used, refers to all malignant neoplasms and neoplasms of the lymphatic and haematopoietic tissues, except Hodgkin's disease, leukaemia and aleukaemia (I.S.C. Nos. 140-200, 202, 203 and 205 respectively).

Where more than one cause of death is reported, the death is classified according to the underlying cause, i.e. the disease or injury which initiated the train of morbid events leading directly to death. This method of classification is followed even if the deceased may have recovered from the underlying cause long before the date of death.

In the text and tables the term "neonatal mortality" relates to deaths of children under 4 weeks of age and the term "infant mortality" to deaths of all children (including neonatal) under 1 year of age. Perinatal deaths are deaths of infants under one week plus still-births.

In general in the tables and abstracts, dots (·) are used to indicate "none", and dashes (—) are used to indicate that information cannot be given or that the headings are not applicable.

## REPORT 1966

### SUMMARY

The rates for live births and still-births were lower than in 1965 and the rates for deaths and marriages were higher.

The following figures indicate the general trend of marriages, births and deaths over the past thirty years. More detailed comparisons will be found in Tables A and A1.

		1936	1956	1965	1966
Estimated population		1,276,000	1,397,000	1,469,000	1,478,000

## POPULATION

The population of Northern Ireland estimated as at 30th June, 1966 was 1,478,000 persons, an increase of 9,000 over the mid 1965 figure. This estimate, comprising civilians and members of H.M. Forces stationed in Northern Ireland, is based on the census taken on 23rd April, 1961 (1,425,042 persons) revised to allow for natural increase and net migration. During the year ended 30th June, 1966, the natural increase of 17,000 (approx.) was off-set by net migration of 8,000 (approx.) Further details regarding population are shown on page 41.

**TABLE C. Populations of counties, county boroughs and urban and rural areas as recorded at the censuses of 1901, 1926, 1951 and 1961, and as estimated at mid-year 1966.**

The 1961 Census population by age and sex for Northern Ireland and for counties and county boroughs is given in Abstract 10.

## MARRIAGES

**Number and rate** Marriages registered during the year numbered 10,735 giving a rate of 7.26 per 1,000 population. The corresponding number and rate for 1965 were 10,452 and 7.12 respectively. In 10,233 (95.3 per cent.) of the total marriages both contracting parties were single; in 353 (3.3 per cent.) one or both were widowed and in 170 (1.6 per cent.) one or both were divorced. Of every 1,000 persons married, 9 were previously divorced. This rate is 1 more than that for 1965; comparative rates for the years 1956 and 1946 were 8 and 6 respectively. Further details are given in Abstract 2.

The number of marriages celebrated in each month in 1966 was as follows:

January .	491	April .	899	July .	1,109	October .	1,023
February .	769	May .	429	August .	1,206	November	497
March .	1,215	June .	895	September	1,634	December	568
Qtrs.: 1st .	2,475	2nd .	2,223	3rd .	3,949	4th .	2,088

This shows that the period July to September was the most popular quarter for weddings, September heading the monthly totals with 1,634. As usual, May was the least popular month.

**Ages at marriage** Although the most popular age for marriage was 22 years for men and 21 years for women, the arithmetical average age of men marrying in 1966 was 27.0 and of women 24.4. During 1965 this age was 27.2 among men and 24.5 among women. In 1956, the average age was 28.8 for men and 25.7 for women. The mean age at marriage of persons marrying for the first time in 1966 was 25.3 years for men and 23.4 years for women. Of the contracting parties 12.6 per cent. of the husbands and 30.4 per cent. of the wives were minors, the relative figures for 1956 being 7.4 per cent. and 22.2 per cent. Further statistics will be found in Abstracts 3, 4, 5 and 6.

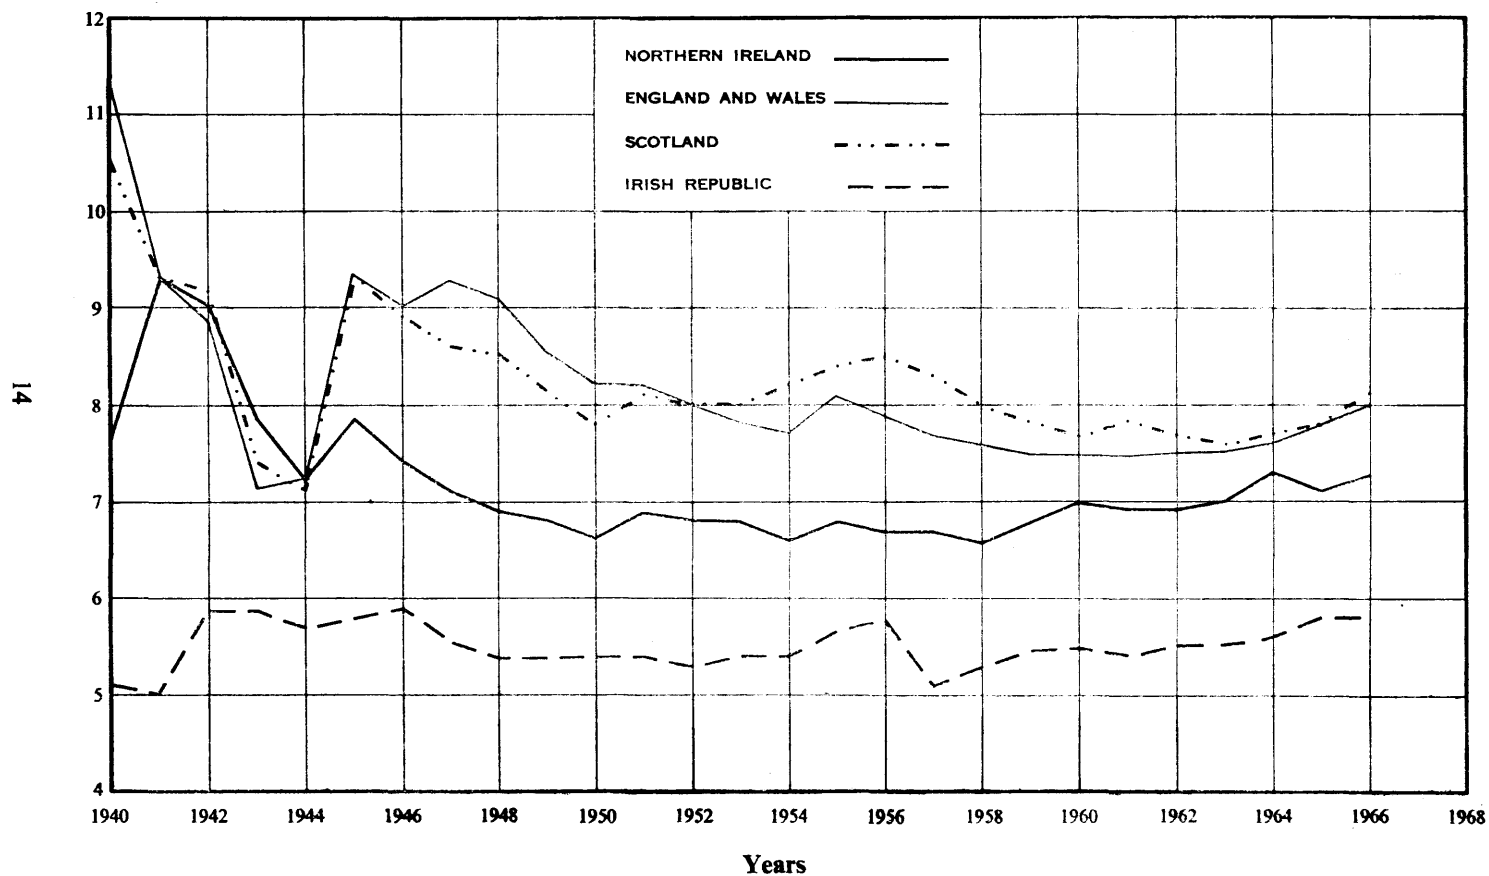

**Method of celebration** Table D shows the marriages registered during the years 1927, 1937, 1951 and 1959 to 1966 according to the form of celebration and Table D1 gives further details of marriages in 1966.

Marriages taking place in registrars' offices in the year under review represented 5.1 per cent. of the total marriages as compared with 5.2 in the previous year.

*TABLE D. Northern Ireland: Marriages registered according to form of celebration, 1927, 1937, 1951, 1959-1966.*

YEAR	Roman Catholic	Presbyterian	Church of Ireland	Methodist	Other denominations	In Registrars' Offices	Total marriages registered	Total marriage rate per 1,000 of estimated population

### LIVE BIRTHS

**Number and rate** Live births registered during 1966 numbered 33,228, 662 less than in 1965. The birth rate was 22.5 per 1,000 of the estimated population, being 0.6 below the rate for 1965. For the eleventh year in succession it was higher than in any other country of the British Isles.

The monthly incidence of births was as follows:

January	. 2,785	April	. 2,796	July	. 2,787	October	. 2,694
February	. 2,440	May	. 2,934	August	. 2,885	November	. 2,577
March	. 3,001	June	. 3,010	September	. 2,949	December	. 2,370
Qtrs.: 1st	. 8,226	2nd	. 8,740	3rd	. 8,621	4th	. 7,641

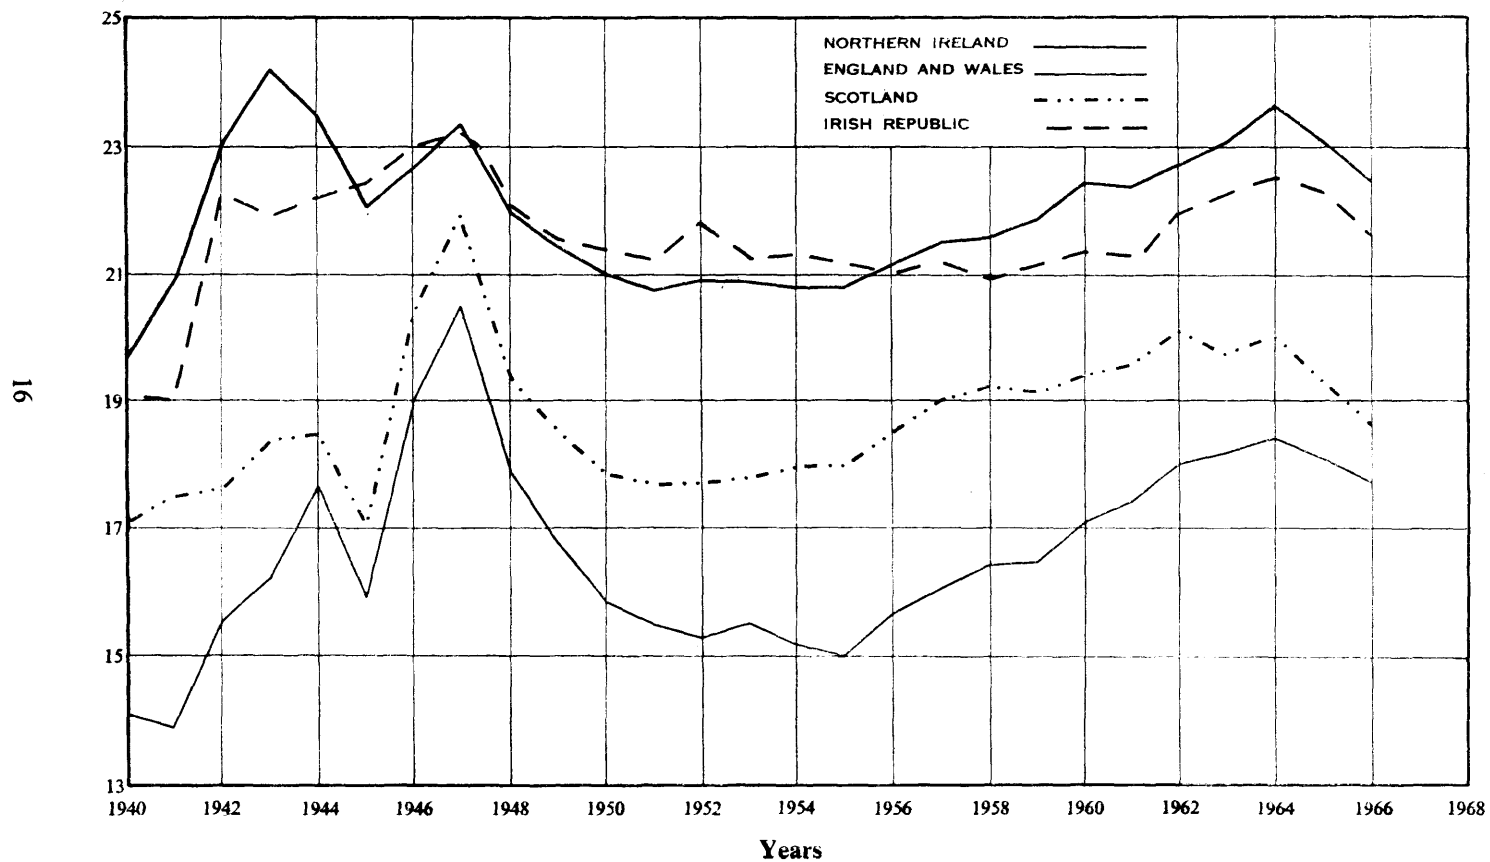

Compared with 1965, the first and fourth quarters showed decreases of 452 and 404 respectively whilst the second and third quarters showed increases of 146 and 48 respectively.

**TABLE E. Northern Ireland: Live births, numbers and rates by area, 1963-1966.**

\*Excluding County Borough.

**DIAGRAM 2. Birth rates (crude) in Northern Ireland, England and Wales, Scotland and the Irish Republic, 1940-66.**  
**Rate per 1,000 population.**

Births registered during 1966, where the normal residence of the parents was outside Northern Ireland, numbered 306 as compared with 323 in 1965. In 145 cases an address in the Irish Republic was given, and of these, 56 births occurred in hospitals: the 1965 figures were 138 and 69 respectively. In 12 cases the parents were itinerants having no fixed abode and 11 of these births took place in hospitals.

**Proportion of males to females** Births of males in Northern Ireland in 1966, numbered 17,333 and those of females 15,895, the proportion of male to female births being 1,090 to 1,000. The corresponding proportions for each of the five years 1961-65 were 1,058, 1,067, 1,077, 1,053 and 1,094 respectively.

**Illegitimate births** The number of illegitimate births was 1,028. This was 33 more than in 1965. The proportion to total live births (3.09 per cent.) was 0.15 above that for the previous year. In England and Wales, Scotland and the Irish Republic, the illegitimate births as percentages of the total live births in the year 1966 were (provisionally) 7.9, 6.4 and 2.3 respectively.

TABLE E1. *Northern Ireland: Illegitimate live births by area, 1963-66.*

AREA	Number of illegitimate births				Illegitimate births as percentage of total live births			
	1963	1964	1965	1966	1963	1964	1965	1966

*County Londonderry	99	128	126	121	3.3	4.1	4.1	4.0
County Tyrone	103	104	95	93	3.1	3.0	2.8	2.8

\*Excluding County Borough

**Multiple births** Up to and including 1960, the birth of one live and one still-born infant was regarded as a single birth and the birth of two live infants and one still-born infant as a twin birth. Since 1961 still-births have been registered and these are now being taken into account to obtain accurate figures for single and multiple births. Of the 33,228 live births, 32,515 were the product of single pregnancies, 705 of twin pregnancies and 8 of triple pregnancies. Table E2 gives the multiplicity of all births.

TABLE E2. *Northern Ireland: Multiple births, 1966.*

†Excluding one case in which the live birth was not registered until 1967.

## STILL-BIRTHS

**Number and rate** The number of still-births registered in 1966 was 550 giving a rate of 16 per 1,000 births (live and still). The relative numbers and rates for the period 1963-1966 are shown in Table F. Comparative 1966 figures in England and Wales and Scotland were 13,170 and 15 and 1,589 and 16 respectively. Still-birth registration is not in operation in the Irish Republic.

TABLE F. *Northern Ireland: Still-births and rates per 1,000 births (live and still) by area 1963-1966.*

\*Excluding County Borough.

Abstract 14 shows the numbers of still-births in administrative areas by sex. The number of still-born children who would have been illegitimate had they been born alive was 21 representing 3.8 per cent. of all still-births. Twenty-two of the still-births were the product of multiple confinements further particulars of which will be found in Table E2 on page 17. In 359 cases the births occurred after less than 37 weeks gestation or the weight of the foetus was not more than 5½ lbs. Of the 550 still-births 478 were certified by doctors, 68 by mid-wives and 4 by coroners. Post-mortem examinations were held in 114 cases. Abstract 9 shows still-births by cause and period of gestation. The percentage of still-births which occurred in hospitals in 1966 was 93.1 compared with 90.5 per cent. in 1965.

TABLE F1. *Northern Ireland: Still-births in hospitals etc., and parity\* of mother 1966.*

PLACE OF CONFINEMENT	TOTAL STILL-BIRTHS	PARITY OF MOTHER											
		0	1	2	3	4	5	6	7	8	9	10 and over	Not stated
In hospital . . .	512	153	89	51	51	37	38	26	20	15	8	14	10
In own homes, nursing homes and all other places . . .	38	7	5	6	5	3	2	4	2	1	2	.	1
TOTAL . . .	550	160	94	57	56	40	40	30	22	16	10	14	11

\*Parity has been taken to mean the number of children born (live and still) to the mother as the result of previous pregnancies.

TABLE F2. *Northern Ireland: Still-births and still-birth rates per 1,000 births (live and still) by cause and sex, 1966.*

International Numbers (Y30-Y39)	Cause	Number		Rate	
		Males	Females	Males	Females
	All causes . . . . .	250	300	14.22	18.52
Y30, Y31	Acute and chronic diseases in mother . . . . .	11	2	0.63	0.12
Y32.3, .4, Y33	Toxaemias . . . . .	24	30	1.36	1.85
Y32.2	Antepartum haemorrhage . . . . .	27	25	1.54	1.54
Y34, Y37	Difficulties in labour . . . . .	12	8	0.68	0.49
Y36	Placental and cord conditions . . . . .	49	59	2.79	3.64
	Congenital malformation of foetus:—				
Y38.0	Anencephalus . . . . .	19	65	1.08	4.01
Y38.1	Hydrocephalus . . . . .	13	16	0.74	0.99
Y38.2	Spina bifida . . . . .	1	4	0.06	0.25
Y38.3	Other malformation of the central nervous system . . . . .	1	5	0.06	0.31
Y38.4	Malformation of the cardiovascular system . . . . .	1	1	0.06	0.06
Y38.5	Malformation of other specified system or part . . . . .	1	3	0.06	0.19
Y38.6	Monster . . . . .	4	2	0.23	0.12
Y38.7	Other and unspecified malformations . . . . .	4	2	0.23	0.12
Y32.0, .1, .5, Y35, Y39.0-.3	Other defined causes . . . . .	25	21	1.42	1.30
Y39.4-.6	Ill-defined or unknown causes . . . . .	62	59	3.53	3.64

Congenital malformations (Y38) caused 136 still-births (i.e. 24.7 per cent. of the total). This group was also the main cause in 1965 when the corresponding figures were 165 and 25.0 respectively.

## DEATHS

**Number and rate** The number of deaths recorded during the year 1966 and the death rate per 1,000 of the population were 16,441 and 11.1 respectively. The comparable figures for 1965 were 15,551 and 10.5.

The monthly incidence of deaths was as follows:

January	. 1,634	April	. 1,316	July	. 1,032	October	. 1,177
February	. 2,033	May	. 1,294	August	. 1,115	November	1,329
March	. 1,996	June	. 1,118	September	1,079	December	1,318
Qtrs.: 1st	. 5,663	2nd	. 3,728	3rd	. 3,226	4th	. 3,824

Of the total deaths 8,659 were of males and 7,782 were of females, the equivalent annual death rates being 12.0 and 10.3 per 1,000 of the male and female estimated populations, respectively. The corresponding rates for 1965 were 11.4 and 9.8.

According to the ages stated to registrars, 988 (6.0 per cent.) of the total deaths were of children under 5 years of age and 11,150 (67.8 per cent.) were of persons aged 65 and upwards. There were 127 deaths of persons (42 males and 85 females) aged 95 and upwards and of this number there was one male at 100 years, one at 102 and one female aged 100 years, four at 101, one at 102, one at 103 and one at 105.

Table G gives a partial analysis of deaths by age for each sex and the percentage of the total deaths in each group.

**TABLE G. Northern Ireland: Deaths by sex and certain age-groups and as percentage of total deaths, 1966.**

		Total	Under 1 year	1-14 years	15-44 years	45-64 years	65 years and over
Number of deaths	P	*16,441	849	241	748	3,452	11,150

**DIAGRAM 3. Death rates (standardised) in Northern Ireland, England and Wales, Scotland and the Irish Republic, 1940-66**  
**Rate per 1,000 population.**

**Deaths in hospitals** The number of deaths occurring in hospitals in each of the years 1957–1966 is shown in Table J. Of the deaths registered in 1966, 52.8 per cent. took place in hospitals (3.3 per cent. in mental hospitals). It will be seen from Table J that the proportion of deaths occurring in hospitals has been increasing steadily through the years, with the exception of the years 1963 and 1966. The proportion of deaths occurring in institutions in 1936 amounted to 27.8 per cent. of the total deaths.

**TABLE J. Northern Ireland: Deaths in hospitals, 1957–1966.**

**Cause of death** Where more than one cause of death is reported the death is classified to the underlying cause, i.e., the starting point in the sequence of events leading to death. See General Notes on page 8.

**Proportion of deaths from principal causes** Abstract 19 sets out the causes of death as proportions per 1,000 of the total deaths in certain age-groups by sex. Heart diseases continued to bear by far the greatest proportion of the total deaths; other diseases having a high proportion were cancer, vascular lesions affecting the central nervous system (mainly cerebral thrombosis and cerebral haemorrhage) and respiratory diseases.

At ages under one year congenital malformations, birth injuries and atelectasis, premature birth, and pneumonia were the principal causes of death.

Between the ages of one and ten the highest proportions were caused by accidents, cancer, congenital malformations, pneumonia and Hodgkin's disease and leukaemia.

Between the ages of ten and twenty-four, accidents caused by far the largest proportion of deaths. The proportions from cancer, congenital malformations, Hodgkin's disease and leukaemia and pneumonia were also high.

Between the ages of twenty-five and forty-four the sequence was cancer, heart diseases, accidents and vascular lesions affecting the central nervous system.

From age forty-five the pattern was heart diseases followed by cancer, vascular lesions affecting the central nervous system and respiratory diseases.

Table K shows, for each of the principal causes, the numbers of deaths and the death rates for each year since 1961.

**Deaths from the principal epidemic diseases** A total of 379 deaths (0.26 per 1,000 population) fell within this group. Of these, 340 were caused by influenza, 34 by diarrhoeal diseases of children under 2 years of age, 4 by whooping cough and 1 by measles. No deaths resulted from the other diseases comprising this group, viz., acute poliomyelitis, diphtheria, small-pox, typhus, typhoid fever, dysentery, scarlet fever and paratyphoid fever.

The number of deaths from the principal epidemic diseases in 1965 was 57 and the relative rate was 0.07. The difference is mainly accounted for by the higher incidence of deaths from influenza in 1966 as a result of the influenzal epidemic during the first quarter of the year.

TABLE K. Northern Ireland: Causes of death and death rates per 100,000 of estimated population, 1963-1966.

Abbreviated List Nos.	CAUSES OF DEATH	Number of deaths				Rate per 100,000 population

NOTE.—Pneumonia of the newborn is included in B43.  
<sup>1</sup>See definition on page 8.

The notifications of certain infectious diseases for each administrative area in Northern Ireland for the year 1966 are shown in Abstract 32, and the diseases named are those laid down by regulations (issued by the Ministry of Health and Social Services) as compulsorily notifiable throughout Northern Ireland.

**Influenza** There were 340 deaths from influenza in 1966 as against a total of 29 in 1965. The relative rates per 1,000 of the population were 0.23 (1966) and 0.02 (1965).

**Tuberculosis** Deaths from this cause numbered 57 compared with 74 in 1965. The rate of 0.04 per 1,000 population is the lowest ever recorded in Northern Ireland. Further details of comparable figures over the past years may be seen at a glance in Tables L and L1.

The tuberculosis death rates (provisional) for England and Wales, Scotland and the Irish Republic in 1966 were 0.05, 0.06 and 0.12 respectively.

More detailed information about deaths from tuberculosis is given in Abstracts 11 and 14.

**Cancer\*** The number of deaths from cancer in Northern Ireland during 1966 was 2,422 giving a death rate of 1.64 per 1,000 of the population which is 0.01 below the rate for 1965.

The death rates from cancer and tuberculosis were roughly the same in 1931 (i.e. 1.26 for cancer and 1.23 for tuberculosis). Since then the cancer rate has increased by 30.2 per cent. and the tuberculosis rate has decreased by 96.7 per cent.

TABLE M. *Northern Ireland: Deaths and death rates from cancer, 1926, 1937, 1951 and 1959-1966.*

YEAR	MALES		FEMALES		TOTAL	
	Number of deaths	Rate per 1,000 of the estimated male population	Number of deaths	Rate per 1,000 of the estimated female population	Number of deaths	Rate per 1,000 of the estimated population

1937	777	1.25	891	1.36	1,668	1.30
1951	1,041	1.56	993	1.41	2,034	1.48
1959	1,185	1.73	1,073	1.49	2,258	1.60
1960	1,205	1.74	1,096	1.51	2,301	1.62
1961	1,138	1.64	1,048	1.43	2,186	1.53
1962	1,177	1.68	1,039	1.41	2,216	1.54
1963	1,180	1.67	1,072	1.45	2,252	1.56
1964	1,196	1.68	1,096	1.47	2,292	1.57
1965	1,249	1.74	1,168	1.55	2,417	1.65
1966	1,284	1.78	1,138	1.50	2,422	1.64

As will be seen from Abstract 11 the most frequent sites of fatal cancer among males during the year were trachea, bronchus and lungs, 374; stomach, 210; intestines, 120; prostate, 111; rectum, 73 and pancreas, 59. Among females the most frequent sites were breast, 206; stomach, 166; intestines, 151; uterus, 73; trachea, bronchus and lungs, 73 and rectum, 60.

For many years cancer of the stomach proved to be the most frequent site of fatal cancer for both sexes and it remained so among females up to 1961 when it took second place to cancer of the breast. Since 1954 however, cancer of the lung has been more prevalent among males. The number of male deaths from this cause increased rapidly each year since 1945, with the exception of 1958, 1960, 1962 and 1964 in each of which years there was a slight decrease compared with the year immediately preceding.

Table M1 shows the numbers and rates of lung cancer deaths by sex for the past ten years. Abstract 11 gives particulars regarding the cancer sites by sex and age-groups and Abstracts 13, 14 and 21 give details of cancer incidence in administrative areas.

\* See definition on page 8.

**DIAGRAM 4. Death rates (crude) from cancer in Northern Ireland, England and Wales, Scotland and the Irish Republic. 1940-66. Rate per 100,000 population.**

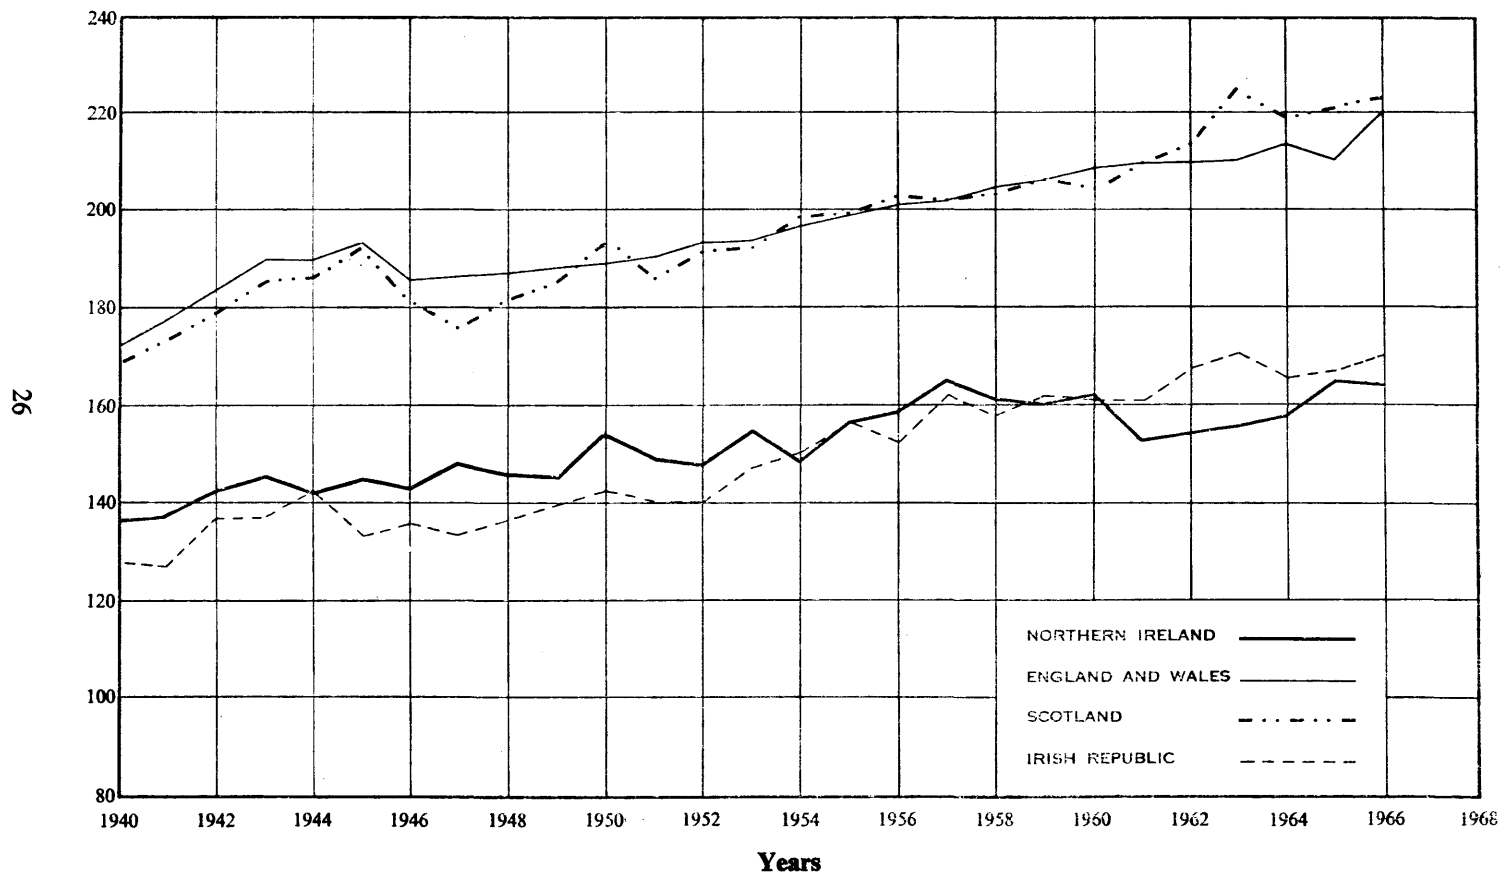

TABLE M1. *Northern Ireland: Deaths and death rates from lung cancer, 1957-1966.*

YEAR	Number			Rate per 100,000 population		
	Males	Females	Persons	Males	Females	Persons
1957	268	45	313	39	6	22
1958	263	51	314	38	7	22
1959	278	68	346	41	9	25
1960	276	59	335	40	8	24

1964	330	66	396	46	9	27
1965	352	62	414	49	8	28
1966	374	73	447	52	10	30

**Cerebral haemorrhage, apoplexy, etc.** The deaths assigned to this group (described as "vascular lesions affecting central nervous system") numbered 2,129 giving a rate of 1.44 per 1,000 of the population. This rate is 0.11 less than that for 1965, and is 0.1 below the average rate for the period 1961-1965. The rate per 1,000 of the male population was 1.23 whilst the female rate was 1.64. Details of deaths in this group by ages are shown in Abstract 11.

**Heart diseases** The deaths from the various forms of heart disease during the year numbered 5,789, the rate per 1,000 of the population being 3.92, which is 0.04 above that for the previous year and is 0.13 below the average for the five years 1961-1965.

TABLE N. *Northern Ireland: Deaths and death rates from heart disease (all forms) 1926, 1937, 1951, and 1959-1966.*

Of the total number of deaths from heart diseases 80.7 per cent. were of persons who suffered from one or other of the diseases known collectively as "arteriosclerotic and degenerative heart disease". Deaths within this group numbered 4,672, arteriosclerotic heart disease including coronary disease accounting for 3,402 or 72.8 per cent. (coronary disease alone accounted for 3,233 or 69.2 per cent.), other myocardial degeneration for 1,187 or 25.4 per cent. and chronic endocarditis not specified as rheumatic for 83 or 1.8 per cent. Deaths resulting from heart disease specified as involving the coronary arteries formed 23.3 per cent. of all male deaths and 15.6 per cent. of all female deaths. Of every 100 men who died from coronary artery disease 41 were under 65 years of age compared with 40 for 1965.

TABLE N1. *Northern Ireland: Deaths and death rates per 1,000 population from arteriosclerotic heart disease, including coronary disease (420.0, .1, .2), and heart disease specified as involving coronary arteries (420.1), 1959-1966.*

1966	2.94	2.80	1.70	1.60	2.30	2.19

**Bronchitis** The deaths from bronchitis during the year numbered 973, giving a rate of 0.66 per 1,000 of the population, which is 0.15 above the rate for 1965. Bronchitis was also an important contributory factor in 496 deaths though not related to the condition taken to have initiated the sequence of events leading to death.

**Pneumonia** It should be noted that in the various tables and abstracts deaths from pneumonia are included under two headings. Unless otherwise indicated the general heading "pneumonia" refers to deaths of all persons aged four weeks or over, and the heading "infections of the newborn" includes deaths from pneumonia of children under four weeks old.

Total deaths from pneumonia (under both headings) numbered 1,004 during the year 1966, the rate of 0.67 per 1,000 of the population being 0.14 above the rate for 1964 and 1965. The average rate for the five preceding years including 1965 was 0.52.

**Pregnancy and childbirth** The mortality of women during pregnancy and childbirth is classified under two headings, namely—(1) deliveries and complications of pregnancy, childbirth and the puerperium and (2) deaths with mention of pregnancy, childbirth and the puerperium but not classified as maternal. The causes of death shown in Table O are those to which the various deaths were assigned, a total of 6 to the former group and 8 to the latter.

From Table O1 it will be seen that the 6 deaths from diseases of pregnancy, childbirth and the puerperal state in 1966 yielded a rate of 0.18 per 1,000 births (live and still), which is 0.14 below the rate for 1965.

The 8 deaths shown in the bottom part of Table O gave a rate of 0.24 per 1,000 births (live and still) compared with 0.35 in the previous year. It should be noted that there is no connection in these cases between the underlying causes shown and the maternal condition coincidentally present.

TABLE O. Northern Ireland: Maternal deaths and deaths in which maternal conditions were coincidentally present, 1966.

**Infant mortality** Deaths of infants under 1 year of age numbered 849, or 26 per 1,000 live births registered. This rate is one more than that for the previous year. Of the 849 deaths, 465 were of males and 384 of females, the former number being equivalent to 27 per 1,000 live births of males and the latter to 24 per 1,000 live births of females. The corresponding rates for 1965 were 27 and 23 respectively. In 1966 the provisional infant mortality rate in England and Wales was 19, in Scotland 23 and in the Irish Republic 25. Comparative figures for previous years are shown in Table B on page 11.

**DIAGRAM 6. Infant mortality rates (crude) in Northern Ireland, England and Wales, Scotland and the Irish Republic, 1940-66. Rate per 1,000 live births.**

**Neonatal mortality** Deaths of infants aged under four weeks numbered 566, representing a rate of 17 per 1,000 live births. This is equivalent to 66.6 per cent. of all deaths of children under 1 year of age. The corresponding figures for 1965 were 602, 18 and 70.9 per cent. respectively. The 1966 rates for England and Wales, Scotland and the Irish Republic were (provisionally) 13, 15 and 16 respectively.

TABLE P. *Northern Ireland: Neonatal and infant mortality rates per 1,000 live births by area, 1963-1966.*

Abstract 25 gives the number of deaths of children under 1 year of age for Northern Ireland by counties and county boroughs (also for the aggregates of the urban and rural areas) for the years 1963-1966. For the last of these years the numbers are given by sex and age-groups.

Abstract 14 gives the number of infant deaths, together with the number of births, for each administrative area in Northern Ireland.

The numbers of infant deaths for 1966 by age and cause of death are given in Abstract 23, together with the infant mortality rates by causes.

**Mortality among illegitimate children** Deaths of illegitimate children under 1 year of age numbered 25 in 1966, which is equivalent to a rate of 24 per 1,000 of the illegitimate live births registered as compared with a rate of 26 for the previous year. The corresponding rates were 26 and 25 per 1,000 legitimate live births respectively for legitimate children in 1966 and 1965.

TABLE R. *Northern Ireland: Illegitimate neonatal and infant mortality rates per 1,000 illegitimate live births by area, 1963-1966.*

AREA	Illegitimate neonatal mortality rate per 1,000 illegitimate live births				Illegitimate infant mortality rate per 1,000 illegitimate live births

\* Excluding County Borough.

Deaths of illegitimate infants aged under four weeks (illegitimate neonatal mortality) numbered 20, representing 80.0 per cent. of the total deaths of all illegitimate children under 1 year of age. The corresponding figures for 1965 were 20 and 76.9 per cent. respectively.

Abstract 23 gives the number of deaths and mortality rates of illegitimate children under 1 year of age by causes. Most of the rates are considerably in excess of the corresponding rates for all children, but it should be noted that many of the rates relating to the illegitimate live births are based on very small numbers of deaths.

Abstract 26 shows the numbers of deaths of illegitimate children under 1 year of age for Northern Ireland by counties and county boroughs and the numbers in the urban and rural areas for the years 1963-1966. The sex and age distribution is shown for the year 1966.

**Violent deaths** Deaths from causes other than natural causes are termed violent deaths and are classified according to both the external circumstances giving rise to injury, expressed as the "external cause of injury" (see Table S), and to the nature of the injury sustained, designated as the "nature of injury" (see Table S2).

The number of deaths ascribed to violence during the year was 655 (417 males and 238 females) which is 62 more than the number registered in 1965, and is equivalent to 4.0 per cent. of the total deaths registered.

**TABLE S. Northern Ireland: Violent deaths by external cause of injury, 1963-1966.**

CAUSES OF DEATH (with detailed list nos.)	1963	1964	1965	1966		
				Persons	Males	Females

<b>TOTAL DEATHS FROM VIOLENCE</b>	<b>605</b>	<b>601</b>	<b>593</b>	<b>655</b>	<b>417</b>	<b>238</b>

Of the 655 deaths, 262 were attributed to transport accidents (E800—E866) (excluding drowning from watercraft (E850, E851)). Road vehicle accidents (E810—E845) accounted for 258 deaths as compared with 211 in 1965. Table S1 affords comparison of numbers of deaths from road vehicle accidents in 1966 with those for the three preceding years by sex and certain age-groups.

**TABLE S1. Northern Ireland: Deaths from road vehicle accidents (E810—845), 1963-1966.**

	All ages	Under 5 years	5-14	15-34	35-54	55-74	75 and over
<b>MALES</b>							
1963	138	8	15	45	22	34	14
1964	152	7	14	51	28	39	13
1965	156	10	8	51	39	38	10
1966	194	15	18	62	40	39	20
<b>FEMALES</b>							
1963	51	3	6	11	7	16	8
1964	80	5	11	10	12	27	15
1965	55	8	10	9	6	17	5
1966	64	7	6	14	11	16	10

Other fatal accidents accounted for 302 deaths and of these deaths 156 were ascribed to falls, 35 to drowning, 32 to poisons or poisonous gases, 28 to fire and heat, 3 to mechanical suffocation, 8 to machinery and 40 to other accidental causes. A detailed break-down showing non-transport accidents by sex and age-groups is given in Abstract 12.

Deaths from accidents recorded as occurring in the home numbered 163 compared with 172 in 1965 and 157 in 1964. Most accidents in the home are occasioned by falls and it should be noted that in 1966 there were 20 deaths from falls where the place of the accident was unspecified which is the same number as during 1965. Fuller details of these and other accidents (apart from transport accidents) are given in Abstract 12.

During the year there were 82 cases of suicide (47 males and 35 females) compared with 70 (42 males and 28 females) in 1965, 7 deaths from homicide and 2 deaths from late effects of injuries due to war operations.

TABLE S2. *Northern Ireland: Violent deaths by nature of injury, 1963-1966.*

<b>TOTAL DEATHS</b>	<b>621</b>	<b>616</b>	<b>615</b>	<b>655</b>	<b>417</b>	<b>238</b>

Deaths in which violence was stated to be the sequel to some other cause are correlated in Table S3. Alcoholism was, as usual, the greatest single factor in this group causing the deaths of 14 people. This figure, however, does not include deaths caused by other people who were in a state of intoxication but who were not themselves killed.

TABLE S3. Northern Ireland: Deaths in which violence was a terminal cause, 1966.

Detailed list numbers	UNDERLYING CAUSE OF DEATH	TOTAL	Road vehicle accidents (E812, 822 and 823 only)	Accidental poisoning by corrosive aromatics, acids and caustic alkalis (E883)	Accidental poisoning by utility gas (E890)	Accidental falls (E900, 903 and 904 only)	Accident caused by fire and explosion of combustible material (E916)	Inhalation and ingestion of food causing obstruction or suffocation (E921)	Accidental mechanical suffocation in bed and cradle (E924)	Other accidental mechanical suffocation (E925)	Accidental drowning and submersion (E929)	Other and unspecified therapeutic misadventure (E955)	Late complication of other forms of treatment (E959)

### CERTIFICATION OF DEATHS

All deaths must be certified by either a medical practitioner or a coroner and Table T shows the type of certification during the year. The circumstances of 1,961 deaths (11.9 per cent. of all deaths) were considered by the coroners and in 622 of these cases inquests were held. In 811 cases the deaths were certified by coroners after post-mortem examinations had proved inquests to be unnecessary.

TABLE T. Northern Ireland: Deaths by certification, 1966.

AREA	Total deaths	Certified by medical practitioners	Certified by coroners		
			Without inquest		After inquest
			Without post-mortem	After post-mortem	
Northern Ireland	16,441	14,480	528	811	622
All urban areas	9,207	8,027	268	559	353
All rural areas	7,234	6,453	260	252	269
Belfast County Borough	5,083	4,407	123	378	175
Londonderry County Borough	580	519	24	18	19
County Antrim	3,114	2,763	81	133	137
County Armagh	1,279	1,160	44	29	46
County Down	3,165	2,733	131	161	120
County Fermanagh	602	536	16	27	23
*County Londonderry	1,162	1,037	42	24	59
County Tyrone	1,456	1,305	67	41	43

\*Excluding County Borough.

Of the 14,480 deaths certified by medical practitioners the deceased persons were not seen after death by the practitioners in 5,030 cases.

## LIFE TABLE

The expectation of life is the average number of years which would be lived by a group of people of given age who are continuously subject to given mortality rates, usually those of a selected year or years.

The abridged life table shown as Table U is based on the mortality rates for 1964–1966 and shows the expectation of life at various age-points together with the number of persons who would survive to given age  $x$  out of 10,000 born, if subjected throughout their lives to this mortality experience.

Thus 97 per cent. of males and 98 per cent. of females would survive the first year of life; 96 per cent. of males and 97 per cent. of females would reach the age of 20; 78 per cent. of males and 86 per cent. of females would reach the age of 60 and the men could then expect an average future lifetime of 15 years compared with 19 years for women.

Based on the mortality experience of 1964–1966 the expectation of life at birth was 67.8 years for males and 73.0 years for females; at age one year the expectations were 68.7 years for males and 73.7 years for females. Table U1 affords comparison of these figures with those for certain preceding years.

TABLE U. *Northern Ireland: Abridged Life Table, 1964–1966.*

Age $x$	Males		Females	
	$l_x$	$e_x$	$l_x$	$e_x$
0	10,000	67.79	10,000	72.98
1	9,719	68.74	9,771	73.68
2	9,702	67.86	9,756	72.79
3	9,694	66.92	9,750	71.84
4	9,689	65.95	9,745	70.88
5	9,681	65.00	9,741	69.91
10	9,659	60.15	9,725	65.02
15	9,641	55.25	9,713	60.10
20	9,604	50.46	9,695	55.20
25	9,558	45.69	9,675	50.31
30	9,512	40.90	9,648	45.45
35	9,449	36.15	9,606	40.63
40	9,354	31.50	9,536	35.91
45	9,189	27.02	9,426	31.30
50	8,931	22.73	9,243	26.87
55	8,515	18.71	8,971	22.61
60	7,805	15.19	8,581	18.52
65	6,792	12.08	7,969	14.76
70	5,437	9.47	7,088	11.28
75	3,889	7.24	5,675	8.47
80	2,379	5.25	3,921	6.13
85	1,064	3.65	2,131	4.19

This abridged life table is constructed from the estimated populations and the total deaths registered during the years 1964–1966.

The column headed  $l_x$  shows the numbers who would survive to exact age  $x$  out of 10,000 born who were subject throughout their lives to the death probabilities indicated by the mortality records for the years 1964–1966.

Column  $e_x$  gives the “expectation of life”—that is the average future lifetime which would be lived by a person aged exactly  $x$  if subject to those death probabilities.

TABLE U1. *Northern Ireland: Expectation of life at birth, at one year of age and at 65 years of age for certain periods between 1890 and 1966.*

Period	Expectation of life					
	At birth		At age one year		At age 65 years	
	Male	Female	Male	Female	Male	Female
1890-92	46.3	45.7	—	—	10.6	10.6
1900-02	47.1	46.7	—	—	10.5	10.4
1910-12	50.7	51.0	—	—	12.1	12.8
1925-27	55.4	56.1	59.9	59.5	11.9	12.7
1936-38	57.8	59.2	—	—	11.6	12.4
1950-52	65.5	68.8	67.5	70.3	12.1	13.5
1956-58	67.6	71.8	68.7	72.7	12.2	14.2
1958-60	67.5	71.9	68.6	72.8	12.1	14.2
1959-61	67.4	72.1	68.5	72.9	12.1	14.2
1960-62	67.6	72.4	68.7	73.2	12.2	14.4
1961-63	67.6	72.5	68.7	73.3	12.2	14.5
1962-64	67.9	72.8	68.9	73.6	12.3	14.7
1963-65	67.8	72.9	68.8	73.6	12.2	14.8
1964-66	67.8	73.0	68.7	73.7	12.1	14.8

The Life Tables for 1901, 1926, 1951 and 1961 are included in Section 1 of the Ulster Year Book, 1966-1968, obtainable from H.M. Stationery Office (price 10s. 0d.).

## CONGENITAL MALFORMATIONS

This section which appeared in the Report for the first time in 1964, relates to children born (live or still) with any apparent deformity. The information about these congenital malformations is furnished to the General Register Office by the county and county borough health committees and is classified according to the residence of the parents and not to the place of occurrence.

During the year 969 children were born with congenital malformations compared with 908 in 1965 and 877 in 1964. As will be seen from Table V County Down had the highest proportion of such births and County Tyrone the lowest. The Northern Ireland rate has increased despite a fall in the number of total births registered.

TABLE V. *Northern Ireland: Number of congenitally malformed children by area and month of birth, 1966.*

AREA	MONTH OF BIRTH												Totals	Rate*
	January	February	March	April	May	June	July	August	September	October	November	December		
Northern Ireland	86	77	86	91	94	72	92	88	71	76	62	74	959	28.7

County Fermanagh	1	1	1	3	6	1	2	4	1	3	1	1	16	16.2
County Londonderry†	6	3	5	11	6	5	5	6	3	4	3	3	57	18.5
County Tyrone	8	4	3	2	3	3	7	1	3	3	4	3	46	13.8

\*Per 1,000 births (live and still).

†Excluding County Borough.

Of the 969 children born with malformations 179 (18.5 per cent.) were born with more than one abnormality. In all, 1,195 separate abnormalities were recorded. Table VI shows the number of children affected by multiple abnormalities in each county.

TABLE VI. *Northern Ireland: Multiple abnormalities by area, 1966.*

AREA	NUMBER OF ABNORMALITIES†											
	1		2		3		4		6		All	
	Children	Abnorms.	Children	Abnorms.	Children	Abnorms.	Children	Abnorms.	Children	Abnorms.	Children	Abnorms.

Northern Ireland	790	790	139	278	35	105	4	16	1	6	969	1,195

\*Excluding County Borough.

†No case of five abnormalities was notified.

In Northern Ireland as a whole 35.5 per cent. of the cases were reported by medical practitioners, the remaining 64.5 per cent. being reported by midwives or other persons with nursing qualifications.

TABLE V2. *Northern Ireland: Number of congenitally malformed children by status of informant showing county or county borough of residence of parents, 1966.*

STATUS OF INFORMANT	COUNTY BOROUGHS		COUNTIES						Totals
	Belfast	Londonderry	Antrim	Armagh	Down	Fermanagh	Londonderry*	Tyrone	
Doctors	86	23	175	37	.	16	7	.	344
Midwives, and other informants with nursing qualifications	170	9	3	66	281	.	50	46	625
Others	.	.	.	.	.	.	.	.	.
TOTALS	256	32	178	103	281	16	57	46	969

\*Excluding Londonderry County Borough.

Details about the nature of the malformations will be found in Abstracts 27, 28, 30 and 31 and data about the mother's age and the number of other children born to her are in Abstract 29.

## MIGRATION

The population figures ascertained at each census enable the net migration during the inter-censal periods to be calculated. Table W shows that during the period of approximately five and a half years between the censuses taken on the 23rd April, 1961 and the 9th October, 1966 there was a provisional net outward movement of 37,751 persons to all countries including other parts of the British Isles.

**TABLE W. Northern Ireland: Net migration during inter-censal period 1961-1966.**

	Males	Females	Total
Population, Census of 1961 . . . . .	694,224	730,818	1,425,042
Births, 1961-1966 . . . . .	94,534	87,995	182,529
Deaths, 1961-1966 . . . . .	44,570	40,480	85,050
Natural increase* . . . . .	49,964	47,515	97,479
Population 1961 plus natural increase . . . . .	744,188	778,333	1,522,521
Population, Census of 1966† . . . . .	724,477	760,293	1,484,770
Net movement outwards . . . . .	19,711	18,040	37,751

\* The excess of births over deaths. † Provisional.

Table W1 shows the natural increase in the population for each inter-censal period since birth and death registration commenced in 1864, together with the net movement outwards and the percentage of the increase lost by migration.

**TABLE W1. Northern Ireland: Inter-censal variations in population, 1871-1966.**

Inter-censal period	Population at beginning of period	Natural increase*	Net movement outwards	Percentage of increase lost by migration
1871-1881	1,359,190	104,350	158,724	152
1881-1891	1,304,816	71,910	140,670	196
1891-1901	1,236,056	68,634	67,738	99
1901-1911	1,236,952	78,996	65,417	83
1911-1926	1,250,531	113,603	107,573†	95
1926-1937	1,256,561	80,835	57,651	71
1937-1951	1,279,745	158,443	67,267†	42
1951-1961	1,370,921	146,349	92,228	63
1961-1966	1,425,042	97,479	37,751‡	39

\* Excess of births over deaths.

† Including deaths in H.M. Forces and Mercantile Marine which occurred outside Northern Ireland.

‡ Provisional.

It is estimated that during the year ended 30th June, 1966 the net outward migration amounted to 7,841 persons which represents 46.6 per cent. of the natural increase (16,841) during that period.

## METEOROLOGY

The following report on the weather experienced in Northern Ireland during 1966 is furnished by the Director-General of the Meteorological Office through his Climatological Services and Meteorological Public Records Office in Belfast. Where the term "average" is used it refers to the standard 35-year period, 1916-50, for rainfall and to the standard 30-year period, 1931-60, in respect of temperature and sunshine.

The mean temperature over the year as a whole was 0.3°C below average: it was colder than average in most months, the exceptions being February, March, June, September and December.

Sunshine for the year was on the whole below average although six months were above average. July and October were notably above average while January, February and April were markedly below average.

Rainfall for the year, over Northern Ireland as a whole, was above average at 113 per cent. February, June and December were wet months which considerably influenced the annual figure. July, January and August had well below average, July being little over half (53 per cent.) of the normal.

Tables on pages 44 and 45 give data in respect of certain stations. Columns 2 and 3 give the highest and lowest air temperature recorded on any date during the appropriate month, whilst columns 4 and 5 give the mean of the daily maxima and minima. The table on page 45 gives also data related to Northern Ireland as a whole, based upon a selection of representative stations appropriate to the Meteorological element and not necessarily those whose data are published on the preceding pages. This information smooths out variations experienced by various parts of the Province and therefore presents a generalised overall picture. The "highest" and "lowest" temperatures, however, refer to values received from around sixty temperature recording stations in the Province, and are not restricted to the six stations whose data are given in preceding tables. Temperature data are given in the Centigrade scale: to convert actual values to Fahrenheit multiply the Centigrade value by 9, divide the resultant by 5, then add 32.0. To convert "difference from average temperature" in the Centigrade scale to Fahrenheit,  $1.0^{\circ} = 1.8^{\circ}\text{F}$ .

A brief summary of general conditions each month is given below: more detailed statements appear in the Quarterly Returns:—

**January:** A dry, dull month with rainfall about 65 per cent. of average and sunshine little over 60 per cent. Temperatures were about or a little below average. Snow fell on up to 6 days in inland districts.

**February:** A wet, mild month with rainfall twice the normal. At Tullymore Park Forest 14.20 inches, 370 per cent of average was recorded. Temperatures were up to 1°C above average and only a few occasions of air frost were recorded. Sunshine was only 58 per cent. of average.

**March:** A mild month with average rainfall and about or a little below average sunshine. Air frost was uncommon.

**April:** A cold month, wet in the south and east with about thrice the average rainfall in County Down but much drier in the north and west with about 70 per cent. of average in County Londonderry. Sunshine was about 60 per cent. of average and temperatures were well below normal being mainly about 1.5°C below average. Wintry precipitation fell on about five occasions.

**May:** Rather wet with rainfall about 130 per cent. of average. Temperatures were about average and sunshine a little above.

**June:** A wet, mild month with 167 per cent. of average rainfall. Temperatures were about 1°C above average and sunshine was about 80 per cent. of the normal.

**July:** A dry, sunny but quite cool month. Rainfall was little over half the monthly normal while sunshine was above average everywhere being generally about 115 per cent. Temperatures were up to 1°C below average.

**August:** A dry and rather cool month, with sunshine a little above average. Rainfall was 69 per cent. of average while temperatures were 1°C to 1.5°C below average.

**September:** Rainfall and sunshine were a little below average while temperatures were a little above.

**October:** A cool, sunny month on the whole. Temperatures were about 1°C below average and sunshine was 123 per cent. of average. Inland districts had about 3 days with air frost. Rainfall was a little above average.

**November:** Again a cool but quite sunny month with temperatures up to 2°C below average and sunshine above average. Rainfall was average. There were about 8 days of air frost in inland districts.

**December:** A wet, mild month with less than 4 days air frost in all districts. Temperatures were a little above average and sunshine a little below. Rainfall was 149 per cent. of average for the Province as a whole.

TABLE X. Northern Ireland: Air temperature, rainfall and sunshine recorded at seven stations during the year, 1966 and general values for the Province as a whole (final values\*).

## ADMINISTRATION

**Introductory** The administrative functions of the office of the Registrar General comprise the registration of births, deaths, marriages and adoptions, and the provision or supervision of machinery for dealing with preliminaries to marriages other than those according to the rites of the Roman Catholic Church.

**Buildings licensed or registered for marriages** The numbers of places of worship (other than those belonging to the Roman Catholic Church) in which marriages could be solemnised, as at 31st December in each of the years 1963, 1964, 1965 and 1966 were as follows:

<i>Denomination</i>	<i>1963</i>	<i>1964</i>	<i>1965</i>	<i>1966</i>
Church of Ireland . . . .	410	413	414	415
Presbyterian . . . . .	510	509	512	513
Methodist . . . . .	160	159	159	160
Others . . . . .	263	263	269	278
<b>TOTAL</b>	<b>1,343</b>	<b>1,344</b>	<b>1,354</b>	<b>1,366</b>

**State of registration** The measures adopted for particulars of births notified under the Notification of Births Act, 1907, to be furnished to registrars in the two county boroughs have continued to be of value in securing the registration of a number of births which had not been registered within the prescribed period of 6 weeks.

Births and deaths not registered within a year of their occurrence can be recorded only with the authority of the Registrar General. During 1966 such authority was granted for the registration of 25 births, as compared with 39 in 1965 and 38 in 1964. The registration of 11 deaths was authorised as compared with 12 in 1965 and 18 in 1964.

**Legitimacy Acts (N.I.), 1928 to 1961** Under these Acts an illegitimate child whose parents have married is, subject to certain conditions, legitimated, and the Registrar General is empowered to authorise the re-registration of the birth. During 1966 the re-registration of the births of 137 children was authorised under these Acts, the comparative figures for 1965 and 1964 being 143 and 153 respectively.

**Adoption of Children Act (N.I.), 1950** Registers of children adopted under the provisions of the above Act and of the previous Adoption Act of 1929 are kept in the General Register Office, to which the adoption orders made by the Courts are transmitted. A certified copy of an entry in the Adopted Children Register is evidence of adoption, and is also evidence of the date of birth of the adopted child. The children whose adoptions were recorded in the Adopted Children Registers during 1966 numbered 408 whilst the figures for 1965 and 1964 were 437 and 400 respectively.

**Searches and certificates** The original records of live births, deaths, and marriages registered in Northern Ireland are, in general, in the custody of local registration officers, who issue annually therefrom many thousands of certificates. An indication of the extent to which Government Departments and the public have utilised the facilities for searching in the indexes and obtaining certificates from records in the General Register Office for

Northern Ireland (including the Adopted Children Register) is afforded by the following statement:

YEAR	OFFICIAL		PAID			
	Searches	Certificates	Searches	Certificates		Fees Received
				Full	Short	
1927	56	29	109	112	—	£ 19 9 0
1937	94	88	363	290	—	55 2 0
1951	222	220	1,683	1,609	1,270	317 0 6

1965	498	493	3,198	3,682	2,663	1,017 7 0
*1966	352	357	3,959	4,456	3,156	1,587 14 0

\*Fees for certificates and searches were increased with effect from the 21st April, 1956 and the 1st April 1966.

**Verifications** Requests for the verification of particulars of events registered are received from Government Departments in connection with claims for pensions, etc. During the year the number of cases dealt with was 11,196 out of which 5,280 were checked from the records in the General Register Office and 5,916 events (where records were not available at that office) were referred to local registration officers.

*Abstracts  
of Marriages, Births and Deaths  
Registered in Northern Ireland  
during the year 1966*
