6 Output classifications

Introduction

6.1 Classifications are used to summarise the diverse range of responses to questions in the Census. This enables efficient statistical processing of data, and facilitates meaningful statistical analysis. Classifications are used in output in a number of ways. Categories within classifications can be combined to reduce the level of detail provided; information can be provided on specific categories of interest; and information from separate classifications can be combined to create new derived variables which provide a different view of the data.

6.2 This section describes the output classifications for questions in the 2001 Census, listing all possible categories within each classification. Derived variables that will be commonly used have also been described.

6.3 Additional derived variables can be commissioned from the census offices as part of a commissioned table request. These new variables will be added to the National Statistics website as they become available.

6.4 To provide customers with a better understanding of the statistical content of the 2001 Census, information is provided on Differences between parts of the UK at 6.8.

6.5 Data classifications at 6.11 provide illustrations of the relevant Census questions, for people and their accommodation.

Mnemonics

6.6 The data classifications should be used when specifying new tables. For convenience, each classification has been given a mnemonic, for example, AGEPUK. These mnemonics are a shorthand method of describing Census classifications when specifying output requirements.

6.7 Whilst the first few characters of the mnemonic are linked to the classification name, the last few characters of the mnemonic indicate whether the classification is describing characteristics of a person (P), family (FAM), household/ household space (H) or communal establishment (C) and whether a classification is applicable to the whole of the United Kingdom (UK) or only to England and Wales (EW), Wales (W), Scotland (S) or Northern Ireland (NI), or a combination (for example, EWS means England, Wales and Scotland). Thus AGEPUK relates to the age breakdown for persons in the UK.

Differences between parts of the UK

6.8 The programme for selecting topics and developing questions for the 2001 Census was co-ordinated between the Office for National Statistics (England and Wales), the General Register Office for Scotland and the Northern Ireland Statistics and Research Agency. Consideration was given to the public acceptability of topics, whether the questions would provide good quality data, the availability of alternative sources and the burden on the public. The final content balances essential needs with what was reasonable to ask the public. Whilst the objective was to ask the same questions across the United Kingdom, there were a number of differences resulting from the need to cater for specific customer requirements. These differences have had an effect on the classifications and outputs available for each part of the UK.

6.9 Household questions

- Number of floors. This question was asked in Northern Ireland only.
- Landlord. This question was the same for all parts of the UK, except that the response categories used local terminology. However, this has not affected the ability to produce comparable output at the UK level.
- Furnished/Unfurnished rented accommodation. This question was asked in Scotland only.

6.10 Person questions

- Country of birth. Response categories were listed in a different order for each part of the UK.
- Ethnic group. There were significant differences in the question in England and Wales, in Scotland and in Northern Ireland, resulting in separate output classifications.
Religion. There were differences in the questions asked in England and Wales, in Scotland and in Northern Ireland, resulting in separate output classifications. There were two questions in Scotland and Northern Ireland (current religion and religion of upbringing), but only one in England and Wales.

Language. There were specific questions on Celtic languages asked in Wales (Welsh), Scotland (Gaelic) and Northern Ireland (Irish). England had no such question on Celtic language.

Qualifications. There were differences in the question in England and Wales, in Scotland and in Northern Ireland to reflect local requirements. In England and Wales there was an additional question asking for information on teaching, medical, nursing and dental professional qualifications. There was less of a requirement for such information in Scotland and Northern Ireland. Consequently, in Scotland there was one tick-box response category asking if people had ‘professional qualifications (for example, teaching, accountancy)’. In Northern Ireland, there was no question asking for information on professional qualifications.

Travel destination. In England, Wales and Northern Ireland the travel destination question referred only to place of work and was asked of people aged 16 – 74 in a job the week before Census. In Scotland, the travel destination question was asked of all people and related to the address travelled to for the main job or course of study (including school).

Method of travel. In England, Wales and Northern Ireland the question on method of travel related to the journey to the main place of work. In Scotland, the question related to travel to the main place of work or study. There were minor differences in the response categories across countries.

Data classifications

6.11 In the following sections, where a variable is taken directly from a question on the Census form, that question is included in the text. If the wording is the same throughout the UK, only the English version (that is with the English question number indicated) is shown. The question used in the rest of the UK is only shown where the wording is different.

Scotland

10 What is (was) the business of the organisation which you named above at Question 3/3?
- For example, MAKING SHOES, REPAIRING CARS, SECONDARY EDUCATION.
- Civil Servants, Local Government Officers - please specify your Department.

This question asks for a description of the business, or main activity of each person’s employer. The variable uses a Census modified version of the UK Standard Industrial Classification of Economic Activities 1992 – UK SIC (92) classification.

For the 2001 Census, industry descriptions given to the question above are automatically coded using the modified SIC(92) classification. Where possible, output is at the detailed 4-digit level. However, in many cases, insufficient information is given by the public when completing this question. For example, insufficient responses provided by the form-filler relating to the construction industry has meant releasing output at the 2-digit level only. This has resulted in a need to produce a modified output classification that is a mixture of 2, 3 and 4-digit industry codes. The classification below provides output similar to that of the 1991 Census. In standard output, the most detailed classification is at section level, A to Q.

Applicability: All people aged 16 – 74 years working in the week before Census and all people aged 16 – 64 years who were not working in the week before Census but who last worked in 1996 or later, England, Wales and Scotland.

Applicability: All people aged 16 – 74 years who have ever worked, Northern Ireland

3 digit code (e.g. 111) – Minor group level, 81 categories
4 digit code (e.g. 1111) – Unit group level, 353 categories

The most detail used in standard output is the sub-major group level.

The sub-major, minor group and unit group structure is defined as follows:

Note that there is no specific reference to whether this care is provided within the household or outside the household. Therefore, no explicit link can be created to infer that the individual providing care is providing it to a person within the same household.

The variable records the time spent in a typical week.

**Applicability:** All people, UK

1. No care provided
2. 1 – 19 hours
3. 20 – 49 hours

### 6.47 Qualifications

**QU(x)PEW**

**England/Wales**

**Which of these qualifications do you have?**

- 1+ A levels / AS levels
- BTEC
- Other qualifications (e.g. City and Guilds, RSA, OCR, BTEC, GCE)
- No Qualifications

This is a multi-tick question asking the person to identify all qualifications obtained. In England and Wales, there is a separate question, which records teaching, nursing, medical and dental professional qualifications. These are described in a separate variable (see **Qualifications, professional PQU(x)PEW**). Respondents are asked to tick all boxes that apply.

During processing, the answers to the tick-boxes are held in a compound field consisting of 0s and 1s. In order to produce a ‘count’ of qualifications held, separate variables are provided on the final output database for each qualification group represented by each tick-box. Note that these variables might not produce accurate counts because, for example, people with 2+ A levels did not always also tick the box for 1+ A levels.

Different questions are asked in England and Wales, Scotland and Northern Ireland to reflect local requirements.

See also the derived variable **Highest level qualifications, HLQPUK** at 6.106.

6.51 Relationship within household
RELATIONSHIP
This variable is based on the relationship question which asks the first 5 people in the household (6 in Northern Ireland) to provide information on their relationship with all previously numbered persons in the household. Persons 6 (Person 7 in Northern Ireland) and over are asked to identify their relationships with Persons 1 and the previous two people only.

During processing the responses to the question are held in a compound field that gives the relationship of that person to all other people in the household. Reciprocal relationships (that is those that are implied by a given relationship) are also held in this field. For example, person 2 is not asked to provide a relationship to person 3, but the relationship can be determined from the relationship to person 2 provided by person 3. The information is used to derive the family variables but is not directly used in standard output.

Applicability: All people in households, UK
1  Husband or wife

6  Mother or father
7  Step-mother or step-father

13 What religion, religious denomination or body do you belong to?
- None
- Church of Scotland
- Roman Catholic
- Other Christian, please write in
- Buddhist
- Hindu

- Another Religion, please write in

14 What religion, religious denomination or body were you brought up in?
- None
- Church of Scotland
- Roman Catholic
- Other Christian, please write in
- Buddhist
- Hindu
- Jewish
- Muslim
- Sikh
- Another Religion, please write in
These questions ask the person to record their religion. In Scotland there is a separate question asking for the religion the person was brought up in. In Northern Ireland, people who do not regard themselves as belonging to any religion are asked to record the religion they were brought up in. A write-in is provided where the person’s religion is not provided as a tick box response. A detailed list of codes was used to code the write-in responses for England and Wales and Northern Ireland. This list contains some codes, added during processing, which are only applicable in Northern Ireland. Write-in answers are not coded in Scotland.

Missing answers are not imputed so the classifications include a ‘not stated’ category.

The classifications used in standard output are:

**England and Wales**
- Christian
- Buddhist
- Hindu
- Jewish
- Muslim
- Sikh
- Other religions
- No religion
- Not stated

**Scotland**
- None
- Roman Catholic
- Other Christian
- Buddhist
- Hindu
- Jewish
- Muslim
- Sikh
- Another religion
- Not answered

**Northern Ireland**
- Catholic
- Presbyterian Church in Ireland
- Church of Ireland
- Methodist Church in Ireland
- Other Christian (including Christian related)
- Other religions and philosophies
- No religion or religion not stated

The last category ‘No religion or religion not stated’ can be split into ‘No religion, with a religion brought up in stated’ and ‘Neither religion nor religion brought up in stated’ if requested as part of an ad-hoc request.

The group ‘Catholic’ includes those respondents who gave their religion as Roman Catholic, Catholic Apostolic Church, Ukrainian Catholic, Greek Catholic, Palmarian Catholic or Catholic.

Responses have been categorised as ‘Other Christian (including Christian-related)’ or ‘Other Religions and Philosophies’ on the basis of the best available information, although it is acknowledged that the categorisation of some of the smaller religions is open to interpretation.

In Northern Ireland a complete listing of all religious groups (with 10 or more adherents) is given in a standard table.
Detailed codes available for commissioned output are as follows. In Scotland, there was no coding of write-in answers. Write-in answers were coded to 'Other Christian' and 'Another religion' solely on the basis of which box was used. The additional codes available only in Northern Ireland are shown separately.

Using individual religion codes

**Note 1:** Users need to be aware that to get a complete number of adherents to a particular religious group they may need to collapse several codes, for example Free Presbyterian and Free Presbyterian Church of Ulster. This is due to several factors:

- a) Adherents to a particular religious group do not always label themselves identically;
- b) Lack of space required respondents to abbreviate the full title of their religious group. This was done in several different ways and often resulted in a more general term which could not accurately be assigned to one particular religious group; and
- c) The requirement for a common England, Wales and Northern Ireland index meant that while in Northern Ireland all Free Presbyterians are probably Free Presbyterian Church of Ulster, this may not be true in England as there may also be adherents of the Free Presbyterian Church of Scotland.

However, users must be aware that when collapsing codes, the two codes may not be identical. For example, the code Presbyterian does not only include respondents who just wrote Presbyterian but also Presbyterian USA and Presbyterian in NZ. Similarly, the code United Church is probably predominately United Church of Canada but may include other respondents.

**Note 2:** Apart from making it necessary to collapse categories, the use of abbreviations may have resulted in several respondents (possibly on the same form) who belong to the same religious group having been coded differently. This is particularly relevant to automatic coding where there is no human intervention. Examples include ‘Christian Fellowship Church’ coded as 029. If a respondent abbreviates this as ‘Christian Fellowship’ it would be coded as 028 and if it is abbreviated as ‘Fellowship Church’ it would be coded as 165. As ‘Christian Fellowship’ includes many other respondents apart from those belonging to this one denomination these codes cannot be collapsed.
