Notes:

1 'Age' is age at last birthday.

2 'Mean age' and 'Median age' are calculated using age in years at last birthday. To estimate 'Mean age' including part-years add 0.50 to the value shown in the table.

## Notes:

1 The living arrangements variable is different to marital status. It combines information from both marital status and the relationship matrix. Therefore a person living as part of a 'cohabiting couple' could in fact be married (to someone else) but will not appear as married or separated in this classification.

2 A person not living in a couple can be classified married (or re-married) if they denote their marital status as married (or re-married) but have no spouse or partner resident in the household.

Notes:

1 'Other method' includes no fixed place of work, working at offshore installation, working outside the UK.

2 For purposes of this table, public transport is defined as: train, bus, minibus or coach.

3 The last two columns show the number of persons who travel to work by public transport who live in a household with/without a car or van expressed as a percentage of the number of persons who travel to work by public transport. Note that these columns may not sum up to 100% as residents of communal establishments who travel to work by public transport appear in neither column.

Note:

1 The occupancy rating provides a measure of under-occupancy and overcrowding. For example, a value of -1 implies there is one room too few and that there is overcrowding in the household. The occupancy rating assumes that every household, including one person households, requires a minimum of two common rooms (excluding bathrooms).
