# Northern Ireland Construction Bulletin

## Output in the Construction Industry – Q4 2011

The Construction Output Statistics published in the Northern Ireland Construction Bulletin are intended to provide a general measure of quarterly changes in the volume and value of construction output in Northern Ireland. These figures are derived from the Northern Ireland Quarterly Construction Enquiry (QCE). This is a statutory survey of construction firms operating in Northern Ireland. Each quarter a sample of construction firms are asked to provide details of the value of construction activity they have undertaken in a specified period. The survey also includes public sector organisations which carry out their own construction activity.

Results are provisional and subject to revision as more up-to-date data becomes available (e.g. through late/revised returns). Figures can also change as a result of the seasonal adjustment process or methodological changes.

### Summary of Key Findings – Q4 2011

- The total volume of construction output in Northern Ireland in Q4 2011 increased by 0.6% compared to Q3 2011 but was 7.7% lower compared to Q4 2010. This is the second consecutive quarter in which the total volume of construction output has increased, albeit both increases have been relatively small.
- The total volume of New Work in Q4 2011 increased by 0.8% compared to Q3 2011 but was 11.2% lower compared to Q4 2010. This was only the second quarterly increase in the volume of New Work Output in Northern Ireland since Q2 2008.
- The total volume of construction output classified as Repair and Maintenance in Q3 2011 decreased by 0.5% compared to the previous quarter but was 3.0% higher than Q4 2010.
- A 2.9% quarter on quarter volume growth was experienced in Housing Output between Q3 and Q4 2011 but quarter on quarter volume reductions were reported for Infrastructure and Industrial & Commercial outputs (-2.2% and -2.9% respectively).

## Introduction

This bulletin provides provisional results from the Northern Ireland Quarterly Construction Enquiry (QCE). The Construction Output Statistics published in the Northern Ireland Construction Bulletin are intended to provide a general measure of quarterly changes in the volume and value of construction output in Northern Ireland.

The Construction Output statistics are used by National Accounts in the calculation of the output measure of UK Gross Domestic Product. The results are used by Northern Ireland Government Departments, Economists, Construction Industry Analysts and Academics to understand the state of the construction sector in Northern Ireland.

The Index of overall Construction (IoC) is also a key economic indicator and one of the earliest short-term measures of the performance of the Northern Ireland economy. In 2010, the construction industry was estimated to account for 8% of regional Gross Value Added (GVA). The latest regional GVA data for Northern Ireland is available at:

<http://www.ons.gov.uk/ons/taxonomy/index.html?nscl=Regional+Accounts>

Other key economic indicators measuring the performance of the Northern Ireland economy exist for the Production and Service sectors. The Index of Production (IoP) and the Index of Services (IoS) are derived from separate surveys of businesses in the production and service sectors. The Index of Production and the Index of Services are published quarterly on the same day as the release of the construction output statistics.

More information about the Index of Production and the Index of Services and the latest results for both surveys is available at:

<http://www.detini.gov.uk/deti-stats-index/stats-surveys.htm>

The Index of Construction, together with the Index of Production and the Index of Services, contribute to the wider understanding of the performance of the Northern Ireland economy and all three measures are regularly reported on in the Department of Enterprise, Trade and Investment's Economic Commentary. The Economic Commentary provides an overview of the state of the Northern Ireland economy, setting it in context with the UK and the Republic of Ireland. The latest Economic Commentary is available at:

<http://www.detini.gov.uk/deti-stats-index/deti-stats-index-4.htm>.

A summary of the main usage of Northern Ireland Construction Output Statistics is available at: [http://www.csu.nisra.gov.uk/QCEdocs/Summary\\_of\\_Usage.pdf](http://www.csu.nisra.gov.uk/QCEdocs/Summary_of_Usage.pdf)

Additional information relating to the Northern Ireland Construction Industry is also contained in Chapter 2 of this Bulletin. This information is provided by Economic & Labour Market Statistics Research Branch (NISRA, DFP) and the Health and Safety Executive Northern Ireland (from a variety of sources). This information is included at the request of the construction sector in Northern Ireland who wished to have all relevant construction statistics collated in one publication. No additional commentary on these statistics is provided within this publication but more information on these statistics is provided in Chapter Two.

The Background Notes on Pages 16-21 of this publication provide detailed information on the methodology used to produce the statistics as well as information on the quality and reliability of the data.

The publication provides various measures of growth (expressed as a percentage) for construction output. The quarter-on-quarter change provides the most recent measure of how construction output is changing. Comparisons are also provided with the same quarter one year earlier.

Tables 1.1-1.6, in Chapter 1, present each construction output series as index numbers. An index number is a convenient form of expressing a series in a way that makes it easier to see changes in that series. The numbers in the series are expressed relatively with one number in that series chosen to be the 'base' (usually expressed as 100) and other numbers being measured relative to that base. For example, a value of 102.4 means that the level of output is 2.4% higher than the base year=100. The Northern Ireland Construction Output series contained in this Bulletin use 2005 as the base year for comparisons.

Indices are created by dividing the current quarter (constant price seasonally adjusted) value of construction output by the average of the base year (2005) and multiplying by 100.

# Northern Ireland Construction Output

## Summary and Commentary

### Results

Results, particularly for the most recent quarters, are provisional and subject to revision as more up-to-date data becomes available (e.g. through late/revised returns). Figures can also change as a result of the seasonal adjustment process or methodological changes.

### Overall Construction Output

The total volume of construction output in the fourth quarter of 2011 increased by 0.6% compared with the third quarter of 2011 but was 7.7% lower compared to the same quarter in 2010. This was the second consecutive quarterly increase in the volume of overall Construction Output in Northern Ireland. However, the total volume of overall construction output in Q4 2011 was 37.8% lower than the peak in Q1 2007.

**Figure 1.1 Volume of Construction Output in NI**

Quarters ending March 2005 to December 2011

# Construction Output split by New Work and Repair & Maintenance

## New Work

In Q4 2011, New Work accounted for 71.2% of all construction output.

In the fourth quarter of 2011, New Work increased by 0.8% from the previous quarter. However, the total volume of New Work in Q4 2011 was 11.2% lower than the same quarter in 2010 and was 47.4% lower than the peak in Q1 2007. Growth in New Work has only been recorded in three of the last twenty quarters.

**Figure 1.2 Volume of New Work Output in NI**  
Quarters ending March 2005 to December 2011

## Repair and Maintenance

In Q4 2011, Repair & Maintenance accounted for 28.2% of all construction output.

In the fourth quarter of 2011, Repair and Maintenance decreased by 0.5% compared to the previous quarter but was 3.0% higher than the same quarter in 2010. Looking at the general trend since Q1 2005, the volume of Repair & Maintenance output has fluctuated up and down around the baseline but this type of construction activity has not been affected as much compared to the downturn experienced in New Work over the same period.

**Figure 1.3 Volume of Repair and Maintenance Output in NI**  
 Quarters Ending March 2005 to December 2011

# Construction Output split by Housing, Infrastructure and Commercial & Industrial

## Housing (including New Housing and Housing R&M)

In Q4 2011, Housing Output accounted for 36.1% of all construction output.

The volume of Housing Output in the fourth quarter of 2011 was 2.9% higher compared to the previous quarter but 18.4% lower compared with the same quarter in 2010. This was the first quarterly growth in Housing Output for nine quarters but the latest volume of Housing Output was 55.2% lower than the peak in Q1 2007.

**Figure 1.4 Volume of Housing Output in NI**  
Quarters Ending March 2005 to December 2011

## Infrastructure (including New Infrastructure and Infrastructure R&M)

In Q4 2011, Infrastructure Output accounted for 23.9% of all construction output.

The volume of Infrastructure work in the fourth quarter of 2011 was 2.2% lower compared to the previous quarter but was 16.7% higher compared with the same quarter in 2010. Unlike other sub-categories of construction which experienced a downturn since the peak level of Q1 2007, infrastructure output increased up to the peak in Q2 2009. Looking at the general trend, the volume of infrastructure output has consistently been above the baseline measure since Q2 2007.

**Figure 1.5 Volume of Infrastructure Output in NI**  
 Quarters Ending March 2005 to December 2011

**Industrial & Commercial (including New Industrial and R&M Industrial and New Commercial and R&M Commercial)**

In Q4 2011, Industrial & Commercial Output accounted for 39.7% of all construction output.

The volume of Industrial & Commercial Output decreased by 2.9% in the fourth quarter of 2011 compared to the previous quarter and was 7.9% lower compared to Q4 2010. The volume of Industrial & Commercial Output in Q4 2011 was 35.6% lower than the peak in Q4 2006.

**Figure 1.6 Volume of Industrial & Commercial Output in NI**  
 Quarters Ending March 2005 to December 2011

## Construction Output in Northern Ireland compared to Great Britain

### Total Volume of Construction Output – NI & GB

The Index of Construction in Northern Ireland in Q4 2011 was 68.0, an increase of 0.6% compared to Q3 2011. Over the same period, the Index of Construction in Great Britain was 96.9, a decrease of 0.5% on the previous quarter. From Q1 2010, the trends in construction output between Northern Ireland and Great Britain have diverged. The volume of Overall Construction output in Northern Ireland has decreased by 16.5%. In contrast, the volume of Overall Construction output in Great Britain has increased by 11.0% over the same time period.

**Figure 1.7 Volume of Construction Output NI & GB**

(Constant (2005) Prices Seasonally Adjusted)  
Quarters ending March 2005 to December 2011

### Total Volume of New Work – NI & GB

The Index of New Work in Northern Ireland in Q3 2011 was 59.5, an increase of 0.8% compared to Q3 2011. Over the same period, the Index of New Work in Great Britain was 101.2, a decrease of 0.6% on the previous quarter. Similar to overall construction output, the trends in New Work between Northern Ireland and Great Britain have diverged from Q1 2010. The volume of New Work in Northern Ireland has decreased by 23.9%. In contrast, the volume of New Work in Great Britain has increased by 12.8% over the same time period.

**Figure 1.8 Volume of New Work Output NI & GB**  
 (Constant (2005) Prices Seasonally Adjusted)  
 Quarters ending March 2005 to December 2011

**Total Volume of Repair & Maintenance Output – NI & GB**

The Index of Repair & Maintenance in Northern Ireland in Q4 2011 was 102.6, a decrease of 0.5% compared to Q3 2011. Over the same period, the Index of Repair & Maintenance in Great Britain was 89.1, a decrease of 0.3% on the previous quarter. Since Q1 2010, growth in the volume of Repair & Maintenance output in Northern Ireland has been variable but consistently higher compared to Great Britain.

**Figure 1.9 Volume of Repair & Maintenance Output NI & GB**  
 (Constant (2005) Prices Seasonally Adjusted)  
 Quarters ending March 2005 to December 2011

## Revisions

In general, revisions to construction output estimates will follow the standard revisions policy shown in the table below.

Frequency and date of revision	Period covered	Reasons
Quarterly	Variable – data can be revised back up to the last four quarters	Late returns; Revised data from firms; Changes to grossing factors;
Quarterly	Variable – full quarterly series	Seasonal adjustment
Quarterly	Variable – full quarterly series	Revisions to Deflators

The table below highlights the latest revisions to previously published estimates of the Index of Construction, Index of New Work and Index of Repair and Maintenance for the last six quarters.

Revisions to previously published figures							Index 2005=100		
Year / Quarter				Previously Published Index of Construction <sup>1</sup>	Revised Index of Construction <sup>2</sup>	Difference	Previously Published Index of New Work <sup>1</sup>	Revised Index of New Work <sup>2</sup>	Difference
2010	Apr	-	Jun (Q2)	78.9	78.8	-0.1	76.2	76.2	0.0
	Jul	-	Sep (Q3)	78.1	78.4	0.3	74.0	74.5	0.5
	Oct	-	Dec (Q4)	74.1	73.7	-0.4	67.8	67.0	-0.8
2011	Jan	-	Mar (Q1)	73.0	72.4	-0.6	67.9	67.1	-0.8

## Survey Response for Quarter 4 2011

For the quarter 1<sup>st</sup> October to 31<sup>st</sup> December 2011, 94% of firms in the sample participated in the survey. A breakdown of valid response by stratum is highlighted below. Firms are stratified according to annual turnover (from IDBR), ranging from the small stratum one firms with an annual turnover of less than £125,000 through to the large stratum six firms which have an annual turnover in excess of £10.5 million.

### All Firms

2011 Oct - Dec (Quarter4)	Stratum	Annual Turnover (£ '000)	Response (%)
	1	0 - 124	89
	2	125 - 549	90
	3	550 - 2,099	94
	4	2,100 - 5,249	98
	5	5,250 - 10499	100
	6	10,500+	93
	<b>Overall</b>		<b>94</b>

**Quarterly Construction Enquiry Returns (All Firms)**

## Background Notes

1. This statistical bulletin provides information on the output of the construction industry in Northern Ireland. The statistics are derived from the Quarterly Construction Enquiry (QCE). This is a statutory survey of construction firms operating in Northern Ireland. Each quarter a sample of construction firms are asked to provide details of the value of construction activity they have undertaken in a specified period. The survey also covers public sector organisations which carry out their own construction activity.
2. The survey measures construction output carried out only in Northern Ireland.
3. The sample of construction firms for the QCE is selected from the Northern Ireland extract of the Inter-Departmental Business Register (IDBR). The IDBR includes all businesses registered for VAT and employers with employees in PAYE schemes.

The sample for the QCE covers Sections 41-43 (Construction) of the Standard Industrial Classification 2007 on the Inter Departmental Business Register (IDBR).

4. Construction activity measured by QCE includes general construction and demolition work, construction and repair of buildings, civil engineering, installation of fixtures and fittings and any other building completion work.
5. The following definitions are used in the QCE to describe Construction Activity:

**New Work** is any new construction activity e.g. factory and office extensions, major re-construction, major alterations, site preparation and demolition.

**Repair and Maintenance** is all on-site work not defined as new construction, e.g. housing conversions, extensions and improvements.

**Housing** refers to all housing construction activity, both private and public sector.

**Infrastructure** refers to any private or public work on roads and car parks, water and sewerage, electricity, gas, communications, air transport, railways, harbours and waterways.

**Industrial & Commercial** includes factories, warehouse, oil, steel, gas and coal, school, colleges, offices, banks, shops, universities, entertainment, agriculture, health, welfare, garages and other miscellaneous projects, covering, both the private and public sectors.

6. **Construction Output** is defined as the following:

Cost of materials;

Labour costs;

Overheads;

Profits;

Costs associated with demolition and site preparation;

Payments made to subcontractors;

The following is not included as output:

Vat charges;

Payments made to consultants or architects;

In all returns, work done by sub-contractors is excluded to avoid double-counting since sub-contractors are also sampled.

7. A summary of methods used to compile Northern Ireland Construction Output can be found at:

<http://www.csu.nisra.gov.uk/QCEdocs/QCE%20methods.pdf>

## **Deflation and Seasonal Adjustment**

8. Results are published in constant 2005 prices, seasonally adjusted, where appropriate. Deflators adjust the value series to take out the effect of price changes to give the volume series. Deflation of construction output is carried out sectorally (i.e. New Housing, New Infrastructure etc) using a range of relevant tender price and output price indices supplied by the Office for National Statistics (ONS). Users are advised that these deflators are UK deflators and are not regional NI deflators.

9. Seasonal adjustment aids interpretation by removing seasonal variation due to climate, hours of daylight, holidays or other regular seasonal patterns.

## Quality Reporting

10. NISRA has developed a revision triangle for the Northern Ireland Index of Construction. This is designed to help users understand the extent to which estimates are revised over time. The revision triangle presents a summary of the differences between the first estimates of growth published and those published three years later for the same reference period. These differences are tested to see if there is a significant difference between them.

Revisions are considered to be biased if the mean revision is statistically significantly different from zero. A standard t-test and modified t-test are used to compare the calculated bias in the Northern Ireland Index of Construction series (the mean revision) with the variability of the revisions.

Thus far, the differences between the first estimates of growth published and those published 3 years later for the same reference period have been found to be not significant.

Spreadsheets giving revision triangles of estimates for all quarters from Q1 2003 can be found at: <http://www.csu.nisra.gov.uk/QCEdocs/revisions-triangle.xls>

Users should be aware that the data presented in this bulletin are estimates, subject to both sampling errors (arising from the fact that the QCE is a survey, not a census) and non-sampling errors (for details please see the Summary Quality Report in the next paragraph).

Sampling error is the difference between a population value and an estimate based on a sample. In practice, the standard error is often used as an indicator of sampling error. The standard error gives users an indication of how close the sample estimator is to the population value: the larger the standard error, the less precise the estimator.

The coefficient of variation (CV) is the ratio of the standard error to the estimate, expressed in terms of a percentage. In general terms, the smaller the CV the higher the quality of the estimate.

CVs have been calculated for the main construction output measures (in current prices) and are available at the following link:

<http://www.csu.nisra.gov.uk/QCEdocs/CVs.xls>

It is difficult to produce standard errors directly for seasonally adjusted series and for volume measures (real prices), but in so far as the standard errors for the unadjusted series are indicators of quality, they will indicate something about the quality of the adjusted series too.

## **Summary Quality Report**

11. A summary quality report for Northern Ireland Construction Output can be found at: <http://www.csu.nisra.gov.uk/QCEdocs/QCE%20Quality%20Report.pdf>.

It is intended to provide users with information on how the statistics have been compiled and the quality of the information upon which they may be drawing conclusions and making decisions.

## **Accuracy**

12. Results, particularly for the most recent quarters, are provisional and subject to revision as later information becomes available.

13. Totals may not always tally as each category is individually deflated and seasonally adjusted.

## **Further Information**

14. Similar data for Great Britain Construction Output is provided by the Office for National Statistics at:

<http://www.ons.gov.uk/ons/search/index.html?newquery=Building+and+Construction>

## **Planned Future Revisions**

15. There are currently no major planned revisions to the Northern Ireland Construction Output series. The Northern Ireland Construction Output Revision Policy can be found at:

<http://www.csu.nisra.gov.uk/QCEdocs/revisions-policy.pdf>

## Publication Policy

16. The Northern Ireland Construction Bulletin is available to download free from the website at: <http://www.csu.nisra.gov.uk/survey.asp84.htm>

17. The tables from the current publication, which include data back to 2000, are available in excel format at:

<http://www.csu.nisra.gov.uk/QCEdocs/BulletinTables2000+.xls>

18. The list of people given pre-release access is available at:

<http://www.dfpni.gov.uk/dfp-statistical-releases-and-pre-release-recipients.pdf>

19. The publication schedule for the next four statistical bulletins is as follows:

Publication Schedule	
2012 Quarter 1	18 July 2012
2012 Quarter 2	17 October 2012
2012 Quarter 3	16 January 2013
2012 Quarter 4	17 April 2013

## National Statistics

20. The Northern Ireland Construction Output statistics are designated as National Statistics. National Statistics are produced to the high professional standards set out in the Code of Practice for Official Statistics. They undergo regular quality assurance reviews to ensure that they meet customer needs. They are produced free from any political interference. More information on 'National Statistics' can be found at: <http://www.statisticsauthority.gov.uk/> The Northern Ireland Construction Output statistics have been formally assessed by the UK Statistics Authority and a copy of this assessment is available at the following link:

<http://www.statisticsauthority.gov.uk/assessment/assessment/assessment-reports/index.html>

# Chapter 2: The Structure of the Construction Industry in Northern Ireland

## Introduction

Chapter 2 'The Structure of the Construction Industry in Northern Ireland' contains information relating to the following:

- Type of construction firms operating in Northern Ireland;
- Number of people employed in the construction industry in Northern Ireland;
- Average earnings in the construction industry in Northern Ireland;
- Reported accidents in the construction industry in Northern Ireland;

This information is included at the request of the construction sector in Northern Ireland who wished to have all relevant construction statistics collated in one publication. No additional commentary on these statistics is provided within this publication but information on the sources of these statistics is provided below.

## Types of construction firms operating in Northern Ireland – Table 2.1

This information is extracted from the Inter-Departmental Business Register (IDBR). The IDBR is a business register which contains information on all businesses in the UK which are VAT registered or operating a PAYE scheme. The register is located in the Office for National Statistics (ONS) Newport but the NI element of the register is maintained within Economic & Labour Market Statistics Research Branch (NISRA, DFP). All businesses contained on the IDBR are categorised using SIC 2007. This is an international classification system that categorises businesses by the type of economic activity in which they are engaged. SIC (2007) Divisions 41-43 of the IDBR relate to Construction activities.

Table 2.1 provides the number of construction firms operating in Northern Ireland by industry breakdown and turnover based on Divisions 41-43 of the Northern Ireland extract of the IDBR. The figures contained in Table 2.1 are not published elsewhere other than this bulletin. These figures are updated annually in the Q4 Construction Bulletin of each year. Statistics derived from the IDBR are classified as National Statistics.

Further information relating to the IDBR is available at the following link:

<http://www.detini.gov.uk/deti-stats-index/stats-surveys/stats-inter-dept-bus-register.htm>

## **Number of people employed in the Construction Industry in Northern Ireland - Tables 2.2-2.4**

This information is sourced from the Census of Employment, the Quarterly Employment Survey and the Labour Force Survey.

Table 2.2 provides a full count of the number of employees in the construction industry in Northern Ireland for the latest available year (2009). The source for this information is the Census of Employment which is a statutory survey which has been carried out every two years since 1987. It is a full count of the number of employee jobs in all industries except for agriculture. The self-employed are also not included. Results are available for male, female, full-time and part-time employees up to a five-digit Standard Industrial Classification level.

Table 2.2 also provides a breakdown of the number of employees in the construction industry by gender and by construction industry classification. Users should be aware that the industrial classification is based on SIC 2003 which was the appropriate classification to use at the time the figures were originally published.

The information contained in Table 2.2 is first published by Economic & Labour Market Statistics Research Branch (NISRA, DFP) before it is published in this bulletin. The next update based on the Census of Employment is due to be released in December 2012 (date not specified). Statistics derived from the Census of Employment are classified as National Statistics.

Further information relating to the Census of Employment is available at the following link:  
<http://www.detini.gov.uk/deti-stats-index/stats-surveys/stats-census-of-employment.htm>

Table 2.3 provides the latest estimate of the number of Northern Ireland Employees in Construction based on the Quarterly Employment Survey. The QES is designed to provide short-term employee job estimates for Northern Ireland in the period between Censuses of Employment.

The QES covers all public sector employers, all private sector employers with 25 or more employees and a representative sample of smaller firms. It provides employee jobs estimates by gender, working pattern (full / part-time) and by Standard Industrial Classification 2007 (SIC07) for Northern Ireland as a whole. Seasonally adjusted figures are also available at broad industry level. This information is collected by Economic & Labour Market Statistics Research Branch (NISRA, DFP).

The information contained in Table 2.3 is first published by Economic & Labour Market Statistics Research Branch (NISRA, DFP) before it is published in this bulletin and the statistics are classified as National Statistics. The statistics are updated quarterly in the NI Construction Bulletin.

Further information relating to the Quarterly Employment Survey is available at the following link: <http://www.detini.gov.uk/deti-stats-index/stats-surveys/stats-ges.htm>

Table 2.4 provides an estimate of the number of self-employed persons in the construction industry in Northern Ireland and is based on estimates from the Labour Force Survey. By definition, the Census of Employment and the Quarterly Employment Survey exclude all self-employed jobs. The information contained in Table 2.4, therefore, supplements the information provided on the number of employee jobs in construction reported in Tables 2.2 and 2.3.

The Labour Force Survey (LFS) is a continuous survey of NI Households. The main purpose of the survey is to provide information on the labour market, including employment, unemployment and economic activity rates. It also covers a range of related topics, such as income, qualifications, training and disability.

The UK is obliged under EC regulations to carry out a Labour Force Survey, using internationally agreed definitions of unemployment, employment and economic activity. Results from the Spring quarter of each year are supplied to Eurostat and can be compared with other EC member states.

The information contained in Table 2.4 is first published in this bulletin. The table is updated quarterly and shows the latest quarterly estimate of the number of self-employed persons in the Northern Ireland Construction Industry together with the annual estimate back to 2001. Statistics derived from the Labour Force Survey are classified as National Statistics.

The findings from the Labour Force Survey are published by Economic & Labour Market Statistics Research Branch (NISRA, DFP) in their Labour Market Statistics Bulletin. Further information relating to Labour Market Statistics is available at the following link: <http://www.detini.gov.uk/deti-stats-index/stats-labour-market.htm>

## **Average Earnings in the Construction Industry in Northern Ireland – Tables 2.5 - 2.7**

This information is sourced from the Annual Survey of Hours and Earnings (ASHE) which is a National Statistics survey. The Annual Survey of Hours and Earnings (ASHE) is a UK wide survey that provides information on hourly, weekly and annual earnings by gender, work patterns, industry and occupation, including public versus private sector pay comparisons. The Northern Ireland element of the ASHE survey is carried out by Economic & Labour Market Statistics Research Branch (NISRA, DFP).

The statistics contained in Tables 2.5-2.7 are first published in this bulletin and are updated annually in the Q3 Construction Bulletin of each year.

Further information relating to ASHE is available at the following link:

<http://www.detini.gov.uk/deti-stats-index/stats-surveys/stats-hours-and-earnings.htm>

## **Reported Accidents in the Construction Industry in Northern Ireland – Tables 2.8.1 – 2.8.6**

This information is sourced from the Case Management System (CMS) of the Health and Safety Executive for Northern Ireland (HSENI). The information comes from incident reports submitted to HSENI under the RIDDOR regulations.

The statistics contained in Tables 2.8.1-2.8.6 are first published in this bulletin and are updated annually. These statistics are classified as 'Official Statistics'.

Further information is available at [www.hseni.gov.uk](http://www.hseni.gov.uk).

**Table 2.1 Structure of the Construction Industry**

The table below shows the number of businesses that are either registered for VAT with HM Customs and Excise or which operate a PAYE scheme with the Inland Revenue, at March 2010

SIC (2007) class/subclass	Description	Turnover (£000) size band

Source: NI Census of Employment, DEII, September 2009

- NOTES: 1 The Census of Employment is a statutory enquiry of all employers in Northern Ireland, carried out biennially under the Statistics of Trade and Employment (NI) Order 1988.
- 2 The Census of Employment covers employee jobs only. It excludes: agriculture (but includes animal husbandry service activities and hunting, trapping and game propagation) the self-employed, HM Armed Forces, private domestic servants, homeworkers and trainees without a contract of employment (non-employed status).
- 3 Persons working 30 hours or less per week are normally regarded as being in part-time employment.
- 4 The Census of Employment counts the number of jobs rather than the number of persons with jobs. Therefore a person holding both a full-time and a part-time job, or someone with two part-time jobs, will be counted twice.
- 5 Employees are classified to a Standard Industrial Classification (SIC07) from the business description for each employment unit.

Source: Quarterly Employment Survey (QES), DEII

<sup>1</sup> Figures are rounded to the nearest 10 and may not sum due to rounding.

<sup>2</sup> Important Notice: Users of QES data should be aware that the sample coverage used to derive employee jobs estimates in NI has been extended. This has resulted in a discontinuity in the QES employee jobs series from the reference period Q3 2009 onwards.

For more details on these changes and their impact please see <http://www.detini.gov.uk/deti-stats-index/stats-surveys/stats-qes/stats-qes-discontinuity-notice.htm>

Estimates of the number of employee jobs are obtained from the Quarterly Employment Survey (QES). The QES covers all public sector bodies, all private sector firms with 25 or more employees and a sample of the remainder. The sample size has been chosen in order that estimates of total employee jobs should be accurate to within +/- 1% of the Census of Employment total. The survey collects information on numbers of persons in full-time and part-time employment. It should be noted that the survey counts the number of jobs rather than the number of persons with jobs. For example, a person holding both a full-time job and a part-time job, or someone with two part-time jobs, will be counted twice.

**Table 2.4 Northern Ireland Labour Force Survey  
Self employed in Construction Industry**

<b>Year (Quarter 2)</b>	<b>Number</b>
2011 Q3	26,000
2011	24,000
2010	27,000
2009	30,000
2008	33,000
2007	31,000
2006	30,000
2005	32,000
2004	34,000
2003	29,000
2002	25,000
2001	25,000

Notes:

Figures are rounded to the nearest thousand.

Above estimates are subject to sampling error.

Allocation between self employed and employees status is by self assessment.

From 2002, the above estimates are based on re-weighted LFS estimates, which are in line with the 2010 mid-year population estimates.

Prior to 2002, the above estimates are based on weighted LFS estimates, which are in line with the 2007 mid-year population estimates.

Figures from 2001-2011 are based on Q2 (Apr-June) each year.

Figures from 2009 onwards are based on SIC2007.

2011 <sup>3</sup>	£271.5	£446.4	x	£12.60	42.8	1.9

PBR - payment by results, includes piecework, bonuses, commission and incentive payments (includes profit related pay until 1996).

Premium pay - for shift-work, and for night or week-end work where these are not treated as overtime.

x - data unavailable or suppressed

\* Average hourly earnings are calculated by dividing the sum of the weekly earnings of the group of employees by the sum of their total weekly hours.

<sup>1</sup> To improve coverage, supplementary data was collected for the 2004 and subsequent ASHE surveys for people who changed or started new jobs between sample selection and the survey period. The ASHE results since 2004 are therefore discontinuous with earlier results.

<sup>2</sup> For the 2006 ASHE results, ONS also introduced a small number of methodological changes. The ASHE results since 2006 are therefore discontinuous with earlier results.
