Deaths Registered in Northern Ireland

Weekly Statistics

Week ending 3rd April 2020 (Week 13)

Provisional statistics

Overall, there were more deaths registered in Northern Ireland in the week ending 3rd April than there have typically been in the same week in recent years. Fifty-five COVID-19 related deaths were registered by the General Register Office (GRO) in that week.

Key Points

- The provisional number of deaths registered* in Northern Ireland in the week ending 3rd April 2020 (week 13) was 434; 147 more than in week 12 and 136 more than the 5-year average of 298.

- Over a quarter (29.7%) of all deaths (129) in week 13 were classified as ‘respiratory’. Please note that all COVID-19 related deaths are included in this classification.

- There have been 4,386 deaths registered in the year-to-date, 28.5% of which (1,248) were classified as ‘respiratory’. The number and proportion of respiratory deaths is lower in the year-to-date than the 5-year average of 4,509.
Fifty-five deaths mentioning COVID-19 on the death certificate were registered in week 13, bringing the total number of COVID-19 related deaths registered in calendar year 2020 to 65. The first death related to COVID-19 occurred in Northern Ireland on 18th March 2020.

We understand that, in the current circumstances, users require the best estimate of the total number of deaths related to COVID-19 occurring in NI (rather than restricting analysis to the date that deaths are registered). Based on the latest data, 79 deaths occurred in NI between 18th March and 3rd April which mentioned COVID-19 on the death certificate (see below for definitional explanations).

The majority of deaths registered in week 13 and the year-to-date were of persons aged 75 and above, with this age-group accounting for around two-thirds of all deaths.

* The data in this bulletin are based on the date of the death registration, not on the date the death occurred. It can take up to five days for a death to be registered in Northern Ireland.
Background

Deaths occurring in Northern Ireland are registered on the NI General Register Office’s Registration System (NIROS). Daily extracts of registration records from NIROS are processed by the NISRA Vital Statistics Unit. Provisional data on deaths registered in each week (ending on a Friday) are compiled at the end of the following week*.

Cause of death coding to the ICD-10 classification is carried out by ONS on NISRA’s behalf on a quarterly basis. This means that quarterly statistics are the first output to report deaths according to underlying cause. These statistics are currently available up to Quarter 1 2019; Quarter 2 2019 statistics are due to be published on 29th April 2020.

To meet user needs, NISRA publish timely but provisional counts of death registrations in Northern Ireland in the weekly deaths provisional dataset. Weekly totals are presented alongside a 5-year weekly average as well as the minimum and maximum number of deaths for the same week over the last five years. To allow time for registration and processing, these figures are published 7 days after the week ends.

Because of the coronavirus (COVID-19) pandemic, from 3rd April 2020 the NISRA weekly deaths release has been supplemented with the numbers of respiratory deaths (respiratory deaths include any death where Pneumonia, Bronchitis, Bronchiolitis or Influenza are mentioned on the death certificate); and deaths relating to COVID-19 (that is, where COVID-19 or suspected COVID-19 was mentioned anywhere on the death certificate, including in combination with other health conditions).

This bulletin will be developed and more detail will be presented over the coming weeks.

** Differences between NISRA’s death registration statistics and the Public Health Agency’s (PHA) Daily Surveillance bulletins **

** PHA COVID-19 Daily Surveillance Bulletin**

The PHA’s COVID-19 Surveillance Bulletin describes COVID-19 activity in Northern Ireland and is produced daily. Alongside information on confirmed cases and numbers of individuals tested, this includes deaths reported on the following basis:

- Case definition: Patients who have died within 28 days of first positive COVID-19 test result, whether or not COVID-19 was the cause of death
- Data source: Clinician reports (e.g. HSC Trusts), Regional Virus Laboratory and local laboratory reports.
- Reporting period: 09.30 am (individuals who have been reported in the previous 24 hours)

PHA figures therefore include the number of deaths reported who have tested positive for coronavirus. These are valuable because they are available very quickly, and give a good indication of what is happening day by day. Their definition is also clear, so the limitations of the data can be understood. But they won’t necessarily include all deaths involving COVID-19. **PHA figures report 55 deaths associated with COVID-19 by 3rd April 2020.**

** NISRA weekly death registration statistics**

NISRA figures (which show 79 deaths associated with COVID-19 occurring by 3rd April and having been registered by 8th April) are different from the PHA’s daily surveillance figures on COVID-19 deaths described above. The NISRA figures are derived from the formal process of death registration and may include cases where the doctor completing the death certificate diagnosed suspected cases of COVID-19, for example, where this was based on relevant symptoms but no test for the virus was conducted. The NISRA figures also include all deaths that occur outside hospital.

Figures produced by NISRA are slower to prepare, because they have to be certified by a doctor, registered and processed. But once ready, they are the most complete statistical information.

* Bank Holidays could affect the number of registrations made within those weeks.
Latest death registration statistics

The provisional number of deaths registered in Northern Ireland in the week ending 3rd April 2020 (week 13) was 434; 147 more (+51.2%) than in week 12 and 136 more (+45.6%) than the 5-year average of 298.

In terms of the year-to-date figures (weeks 1 to 13), the total number of deaths registered (4,386) is currently lower (-2.7%) than the 5-year average (4,509).

Note: Statistics for the full year are available in the accompanying spreadsheet.

1 This data are based on registration dates of deaths, not occurrences. It can take up to five days for a death to be registered in Northern Ireland.

The number of death registrations mentioning COVID-19 on the death certificate, increased from 1 in week 11, to 9 in week 12 and 55 recorded in week 13 (65 in total). In week 13, 29.7% of all deaths registered mentioned terms relating directly to respiratory causes on the death certificate. These are counted as ‘respiratory’ deaths in the table below and are provided to aid comparison with the COVID-19 statistics (COVID-19 deaths are also included in the respiratory category).

There have been 1,248 respiratory deaths registered in the year-to-date; this equates to 28.5% of all deaths so far in 2020. The number and proportion of respiratory deaths is lower in the year-to-date than the 5-year average (1,445, 32.0%).

Note: Statistics for the full year are available in the accompanying spreadsheet.

1 This data are based on registrations of deaths, not occurrences. It can take up to five days for a death to be registered in Northern Ireland.

2 COVID-19 deaths include any death where Coronavirus or COVID-19 (suspected or confirmed) was mentioned anywhere on the death certificate.

3 Respiratory deaths include any death where terms directly relating to respiratory causes were mentioned anywhere on the death certificate (this includes COVID-19 deaths). This is not directly comparable to the ONS figures relating to ‘deaths where the underlying cause was respiratory disease’.
Overall, there were more deaths registered in Northern Ireland in the week ending 3\textsuperscript{rd} April than there have typically been in the same week in recent years. Fifty-five COVID-19 related deaths were registered by the General Register Office (GRO) in that week.

**Deaths registered by age-group**

The majority of deaths registered in week 13 and the year-to-date were of persons aged 75 and above, with this age-group accounting for around two-thirds of all deaths.

The 37 COVID-19 related deaths registered among those aged 75+ in week 13 equated to 13.3% of all deaths registered for this age-group during the week, while the 16 COVID-19 related deaths registered among those aged 45-74 equated to 12.5% of all deaths for this age-group.

**Two-thirds of all registered deaths in Northern Ireland in week 13 and in the year-to-date were aged 75+.**

This release focuses on deaths **registered** by the General Register Office (GRO) during the week ending 3\textsuperscript{rd} April 2020. In the current circumstances, users will require the best estimate of the total number of deaths related to COVID-19. Based on the latest registration based\textsuperscript{1} data, 79 COVID-19 deaths **occurred** in NI between 18\textsuperscript{th} March and 3\textsuperscript{rd} April.

Please refer to the highlighted section on page 3 of this bulletin to understand why these figures differ from those provided by the Public Health Agency (PHA) in its daily COVID-19 Surveillance Bulletin.

\textsuperscript{1} Figure based on deaths registered by GRO up to and including 8th April 2020.

**List of Tables**

Data accompanying this bulletin are available from the NISRA website in CSV and Excel format. The spread sheet includes the following tables.

Table 1: Deaths registered each week in Northern Ireland, 2020
Table 2: Deaths registered each week in Northern Ireland, by age-group, 2020
Table 3: Covid-19 deaths registered each week in Northern Ireland, by age-group, 2020
This is a National Statistics publication.

National Statistics are produced to high professional standards set out in the Code of Practice for Official Statistics. They are produced free from any political interference.

The UK Statistics Authority has designated these statistics as National Statistics, in accordance with the Statistics and Registration Service Act 2007 and signifying compliance with the Code of Practice for Official Statistics.

Designation can be broadly interpreted to mean that the statistics:
- meet identified user needs
- are well explained and readily accessible
- are produced according to sound methods
- are managed impartially and objectively in the public interest

Once statistics have been designated as National Statistics it is a statutory requirement that the Code of Practice shall continue to be observed.
