Labour Market

Statistics Bulletin

Monthly Labour Market Report

September 2014

A NATIONAL STATISTICS PUBLICATION

The United Kingdom Statistics Authority has designated these statistics as National Statistics, in accordance with the Statistics and Registration Service Act 2007 and signifying compliance with the Code of Practice for Official Statistics.

Designation can be broadly interpreted to mean that the statistics:

- meet identified user needs;
- are well explained and readily accessible;
- are produced according to sound methods, and
- are managed impartially and objectively in the public interest.

Once statistics have been designated as National Statistics it is a statutory requirement that the Code of Practice shall continue to be observed.

Labour Market

Seasonally adjusted Labour Force Survey (LFS) estimates for Northern Ireland for the period May - July 2014 showed an increase over the quarter in the number of economically inactive while the number of employed and unemployed decreased. The seasonally adjusted claimant count in August 2014 decreased by 600 over the month to 52,200. There were 188 proposed redundancies notified in the latest reference period and 64 confirmed redundancies in August 2014.

Employment

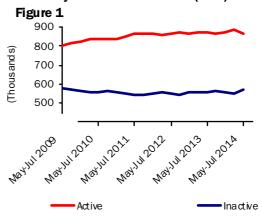

The number of persons in employment in the period May - July 2014 was estimated at 808,000. This estimate decreased by 14,000 over the quarter and by 4,000 over the year. The employment rate for those aged 16-64 was estimated at 68.0%, this decreased by 0.1 percentage points over the quarter but increased by 0.5 percentage points over the year. The employment rate in NI remained below the UK average (73.0%) and was the lowest rate among the twelve UK regions.

Unemployment

The unemployment rate for the period May - July 2014 was estimated at 6.6%. This estimate decreased by 0.3 over the quarter and by 0.3 percentage points over the year. The number of unemployed persons was estimated at 57,000, down 4,000 over the quarter and down 3,000 over the year.

Unadjusted figures show that 51.8% of the unemployed have been unemployed for 1 year or more – down 4.0 percentage points over the year. They also estimate the unemployment rate for 18 - 24 year olds at 20.0% – up 1.2 percentage points over the year.

Seasonally Adjusted Labour Market Summary for Northern Ireland (16+)

Economically Inactive

The seasonally adjusted number of economically inactive persons in the period May - July 2014 was estimated at 569,000. This figure is up 19,000 over the quarter and 12,000 over the year.

The NI economic inactivity rate for those aged 16-64 stood at 27.1%. This is significantly higher than the UK average rate (22.1%) and is the highest of the twelve UK regions. Unadjusted figures estimate that 28% of the economically inactive, aged 16-64, are sick/disabled. 27% are students, 26% are looking after the family/home, 12% are retired and 7% are 'other' reason.

Unadjusted figures, of all those economically inactive, show that while 91% of the inactive do not want work, the remaining 9% (50,000) want employment but do not satisfy the full ILO job search criteria (by actively seeking work and being available to start a job).

Estimates from the LFS have an associated

Northern Ireland Labour Market Summary (seasonally adjusted) Table 1

	Period	Estimate	Sampling Variability of estimate	Change over year	Sampling Variability of change
Employment	May-Jul 2014	808,000	+/-24,000	-4,000	+/-31,000
Unemployment	May-Jul 2014	57,000	+/-11,000	-3,000	+/-15,000
Economically inactive	May-Jul 2014	569,000	+/-22,000	12,000	+/-28,000
Unemployment rate	May-Jul 2014	6.6%	+/-1.3pps	-0.3pps	+/-1.7pps
Employment rate1	May-Jul 2014	68.0%	+/-1.8pps	0.5pps	+/-2.2pps
Economic inactivity rate1	May-Jul 2014	27.1%	+/-1.7pps	-0.2pps	+/-2.1pps
Claimant Count	August 2014	52,200		-9,800	

Note: pps = percentage points, ¹ Rates based on new definition of working age (i.e. 16-64 for males and females) - see Section 9 for details.

degree of statistical error as they are based on a sample of the population. The annual changes for the main LFS categories of employment, unemployment and economic inactivity were tested for statistical significance. The results showed that none of the annual changes in the estimates were statistically significant i.e. the recorded change did not exceed the variability expected from a sample survey of this size (see table 1 and Section 9 for details).

Unemployment Regional Comparison

The latest NI seasonally adjusted unemployment rate (6.6%) is above the overall UK average rate (6.2%) and was the sixth lowest rate among the twelve UK regions. The NI rate was below the European Union (10.2%) and Republic of Ireland (11.8%) rates for June 2014. Comparable figures for May - July 2014 estimate the NI unemployment rate for 18-24 year olds at 20.0%, compared to a UK average rate of 14.9%.

Claimant Count

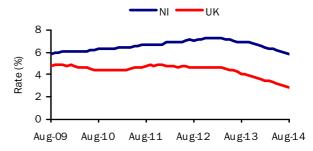

The more recent seasonally adjusted claimant count decreased by 600 from last month's revised total. It now stands at 52,200 (5.9% of the workforce) in August 2014. Over the year the Claimant Count in NI has decreased by 9,800 (15.8%) and the workforce unemployment rate has decreased by 1.1 percentage point. The claimant count has fallen 12,600 since its most recent peak in December 2012 and this is the first time there has been a fall in twenty consecutive months since June 1995.

Claimant Count Regional Comparison

The seasonally adjusted claimant count rate in NI (5.9%) was higher than the UK average rate (2.9%) and was the highest rate among the twelve UK regions. This is the 53rd consecutive month that NI has had the highest or second highest UK region unemployment rate, on this measure. The monthly decrease in NI claimants (1.1%) was lower than the UK average decrease (3.7%) during the same period. The annual decrease in NI claimants (15.8%) was the lowest decrease of twelve UK regions (the annual decrease in the UK was 30.5%).

Seasonally Adjusted Claimant Count Monthly Rates

Figure 2

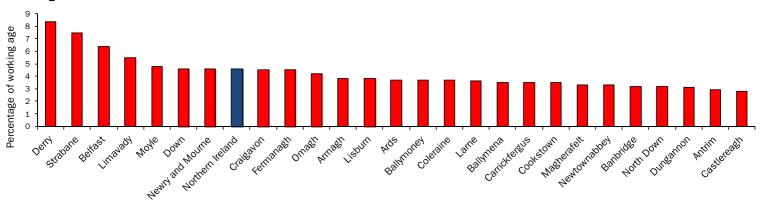

Claimant count rates for District Council Areas

Figure 3 (unadjusted numbers as a percentage of the resident working age population) show that the highest rates at August 2014 were in Derry (8.4%), Strabane (7.5%), Belfast (6.4%), and Limavady (5.5%). All 26 District Council Areas showed a decrease over year, with the largest decreases in Dungannon (27.4%), Ballymoney (25.5%) and Carrickfergus (24.7%).

Revisions to Labour Force Survey estimates planned for October 2014

There are currently plans to revise estimates derived from the Labour Force Survey (including estimates of employment, unemployment and economic inactivity), in the October 2014 edition of the Labour Market Report. This is due to the deployment of the population estimates from the 2011 Census. Estimates will be revised back to the period June to August 2001.

Redundancies

There were 188 proposed redundancies notified during the period mid August 2014 to mid September 2014. This compares to 93 proposed redundancies that were notified in the previous monthly period.

There were 64 confirmed redundancies in the month of August (Figure 5). Over the latest twelve month period there were a total of 2,136 confirmed redundancies, a decrease of 33% from the previous year (3,165).

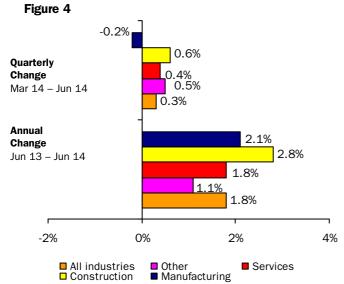

Over the latest twelve month period there were a total of 3,191 proposed redundancies, an increase of 17% from the previous year (2,716). Currently there are 1,067 outstanding redundancies (that is, proposed but not confirmed), which is 26% higher than this time last year (844).

Note that since all proposed redundancies do not actually take place, the confirmed total provides a better indication of real job losses.

Quarterly Employment Survey

The estimated seasonally adjusted employee jobs total in Northern Ireland at June 2014 was 712.480. This represents an increase (+2.210 jobs) from the revised figure for the previous quarter and represents an increase of 12,780 jobs over the year (see Section 9 for details of QES revisions).

Annual and Quarterly changes in employee jobs (seasonally adjusted*)

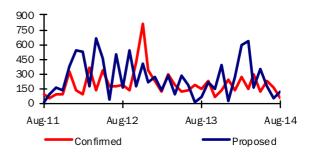

The seasonally adjusted quarterly change consisted of increases across; the Service Sector (+2,060 jobs), the Construction Sector (+180 jobs) and the Other Industries Sector (+110 jobs). There was a decrease in the Manufacturing Sector (-140 jobs). Over the same period the Public Sector increased by 170 jobs while the private sector increased by 1,740 jobs.

Over the year to June 2014, the public sector decreased by 1.6% (-3,480 jobs) compared to an increase of 3.4% (+16,280 jobs) in the private sector.

Confirmed and Proposed Redundancies August 11 - August 14 Figure 5

Hours worked

In the three months to June 2014, the average actual weekly hours worked in NI was 33.8 hours higher than the UK average (32.5) for the same period. For full-time workers, in Northern Ireland, the average actual number of hours worked was 38.7 and was above that for the UK (37.9). For part-time workers in Northern Ireland, the average actual numbers of hours worked stood at 17.7 hours whereas the respective figure stood at 16.3 hours in the UK.

Index of average actual weekly hours worked, NI and UK Figure 6

Annual Survey of Hours and Earnings (ASHE)

Earnings results for April 2013, which were released on 12 December 2013, show that yearly growth in median gross weekly earnings for all employees (i.e. both full- and part-time) in NI was 1.7% (to £367), compared to the UK where earnings increased by 2.6% (to £417). NI full-time employees' gross weekly earnings at April 2013 were £460, which was 88.9% of the figure in the UK (£518). NI full-time earnings increased by 0.5% over the period, compared with an increase of 2.2% in the UK.

Full-time weekly private sector earnings in NI increased over the year by 2.3%, to £403. This represented no change to the NI/UK private sector pay gap which remains at 82.1% of the UK figure. Part-time private sector earnings grew 7.9% to £132.

Labour Force Survey

Background

The Labour Force Survey (LFS) is a sample survey carried out by interviewing individuals about their personal circumstances and work. It provides a rich source of information on the labour force using internationally agreed definitions. However, the estimates from it are subject to sampling error and care should be taken when making inferences from them (see section 9 for details).

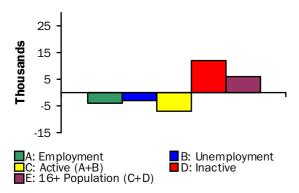

Labour Market Summary (seasonally adjusted)

The latest seasonally adjusted Labour Force Survey estimates for May - July 2014 (see Table 2) estimated the unemployment rate at 6.6% (57,000 persons), down 0.3 percentage points from the previous quarter. The employment level decreased by 14,000 over the quarter (808,000 persons).

Labour Market change over the year

In the year to May - July 2014 (see Figure 7), LFS figures estimated that total employment decreased by 4,000, that unemployment decreased by 3,000, that numbers of economically active decreased by 7,000 (figures may not sum due to rounding). The number economically inactive increased by 12,000 over the year.

Labour Market Structure Change over the year Figure 7

Employment

Latest seasonally adjusted estimates show that there were 808,000 persons in employment, which is down 4,000 over the year. Of the total, 53% (426,000) were male and 47% (382,000) were female.

Male employment rate increased by 0.4 percentage points over the year while the female rate increased by 0.5 percentage points.

Economic Inactivity

The number of economically inactive persons in the period May - July 2014 was estimated at 569,000. This figure includes those people that are past retirement age and are unlikely to reengage with the labour market. Therefore it is the economically inactive of working age (i.e. those aged 16-64) that are of most interest to labour market analysts. In May - July 2014, there were an estimated 315,000 economically inactive people aged 16-64 in NI. Of the total, 38% (121,000) were male and 62% (194,000) were female

To provide a more detailed analysis, the results below are unadjusted for seasonality, unless otherwise stated.

Unadjusted figures show that 85% of the economically inactive of working age do not want a job, while the remaining 15% want work, but are not actively seeking or available to start work.

Economically Inactive of Working Age Reason for not wanting work

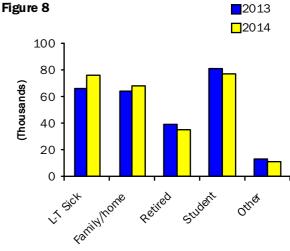

Figure 8 shows the reason given by these people for not wanting work. The largest categories were students (77,000), long-term sick (76,000) and those looking after family/home (68,000). Among these categories, the largest change over the year occurred for long-term sick (10,000 or 15.1%).

Claimant Count

Unadjusted Claimant Count

The claimant count in NI at August 2014 was 53,258 (6.0% of the workforce), an increase of 1.2% (630) over the previous month. There was a decrease of 15.9% (10,035) over the year and the rate decreased by 1.1 percentage points. Five years ago the total was 53,511 (6.0%). (The seasonally adjusted claimant count decreased by 600 from the previous month's revised figure).

Youth Claimants

A total of 14,018 under 25's (26.3% of all claimants) were claiming benefits in August 2014, representing an increase of 1.5% (212 claimants) over the month and a decrease of 20.1% (3,534) over the year. Youth claimants represent 1.6% of the workforce.

Long-term Claimants

At August 2014, 17,927 (33.7% of all claimants) were claiming benefit for a year or more, representing an increase of 0.8% (146 claimants) over the month and a decrease of 5.4% (1,018) over the year. Long-term claimants represent 2.0% of the workforce.

Flows out from Job Seekers Allowance

The success rate of job seekers leaving the count to obtain employment in August 2014 increased by 0.4 percentage points since the same time last year. Of the 7,915 flows from the count in August 2014, 2,990 (37.8%) found employment, compared to 2,770 (37.4%) of the 7,400 claimants who left the count in August 2013. This compares to 37.4% three months ago and 36.3% six months ago.

In the period from August 2013 to August 2014 the highest proportion (46.6%) of persons leaving JSA to find employment is in December 2013, while in January 2014 the proportion finding employment was at its lowest (32.6%). The highest proportion (21.7%) of persons leaving JSA to enter education or training occurred in October 2013. Those who left JSA to claim other benefits varied between 3.4% and 5.2% in the period. Those who left JSA because they failed to sign peaked at 29.2% in January 2014.

Flows on to Job Seekers Allowance

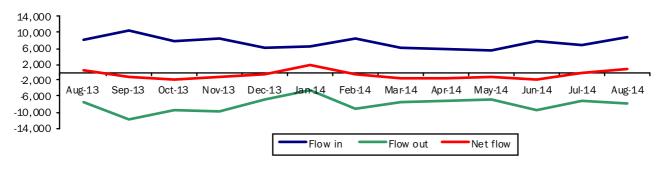

Of the 8,675 claimants who joined the count in August 2014, 40.4% were under 25, 27.2% were aged between 25-34 years, 14.1% were aged between 35-44 years, 12.0% were aged between 45-54 years and 6.2% were 55 and over. In August 2014, 5,380 males (62.0%) joined the count compared to 3,295 females (38.0%).

Net Flow

There was a net flow of persons out from Job Seekers for 10 months and a net flow onto Job Seekers for 3 months between August 2013 and August 2014. Net flows off Jobseekers peaked in October 2013 with a net off-flow of 1,785 persons, while net flows onto Jobseekers peaked in January 2014 with a net on-flow of 1,770.

Further information on flows data is available in section 9.

^{*} Data relates to 2012. Jobs Density = total number of jobs in an area divided by the resident population of working age in the area

Claimant spells ended by destination Figure 10

Occupation Data

At August 2014, 32.1% (16,740) of all claimants defined their usual (or previous) occupation as an Elementary Occupation. Elementary Occupations includes elementary agricultural, construction, process plant, goods storage, administrative, personal services, cleaning, security and sales occupations. A further 17.6% (9,190) gave their usual occupation as working in Sales and Customer Service Occupations. These two groups account for approximately one half of all claimants in August 2014. The smallest occupation group, with 1.6% (825) of all claimants, was Managers and Senior Officials.

Overall the NI claimant count (computerised claims only) increased by 1.2% over the month to August 2014. Seven of the nine occupational groups showed an increase in levels, with the largest increase in levels occurring in Professional Occupations which increased by 260 (17.6%), followed by Sales and Customer Service Occupations which increased by 190 (2.1%). The groups showing the only decreases occurred in Process, Plant and Machine Operatives, which decreased by 70 (1.1%), followed by Elementary Occupations which decreased by 15 (0.1%).

Redundancies

There were 2,136 confirmed redundancies over the year to 31st August 2014, a decrease of 33% compared to the same period in the previous year (3,165). Of these, 64 confirmed redundancies took place during the calendar month of August 2014 and 163 in the previous month of July 2014. This compares to 157 in August 2013 (one year ago).

Table 8 shows the distribution of these confirmed redundancies by District Council area. The largest number of redundancies occurred in Belfast (571), Limavady (233) and Down (211) District Council areas.

Of these 2,136 confirmed redundancies, 720 or 34% were in the Wholesale and Retail sector, with 497 redundancies (23% of all redundancies) occurring in Retail Trade (except of motor vehicles and motor cycles). A further 202 redundancies (9% of all redundancies) occurred in the Construction sector.

Altogether there are 1,067 outstanding redundancies that have been notified, but have yet to take place. This compares with 844 this time one year ago – an increase of 26%.

Redundancy Legal Requirements

Under the Employment Rights (Northern Ireland) Order 1996 (Amended 8 October 2006) companies are only legally required to notify the Department of impending redundancies of 20 or more employees. Companies who propose less than 20 redundancies are not included in the statistics.

Quarterly Employment Survey

Seasonally Adjusted

The June 2014 seasonally adjusted employee jobs figure stands at 712,480.

This represents an increase of 0.3% (or +2,210 jobs) from the revised March 2014 estimate of 710,270.

Over the quarter seasonally adjusted employee jobs increased across; the Service sector by 0.4% (+2,060 jobs), the Construction Sector by 0.6% (+180 jobs) and in the 'Other' industries sector by 0.5% (+110 jobs). There was a decrease in the Manufacturing Sector by 0.2% (-140 jobs).

Unadjusted

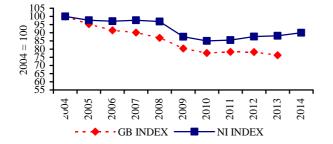

The June 2014 unadjusted employee jobs estimate stands at 711,920.

This represents an increase of 0.5% (+3,440 jobs) since March 2014 and an increase of 1.8% (+12,760 jobs) in the past year.

Over the year, June 2013 to June 2014, there were increases across all sectors; the Service sector by 1.8% (+10,130 jobs), in the Manufacturing Sector by 2.1% (+1,580 jobs), in the Construction sector by 2.8% (+810 jobs) and in the 'Other' industries sector by 1.1% (+230 jobs).

Manufacturing jobs for NI & GB indexed (June of each year*)

Figure 11

^{*}GB data for June 2014 was not available at time of publication

Manufacturing Employee Jobs

The level of jobs in the Manufacturing sector in both NI and GB has declined over the past 10 years.

NI manufacturing jobs steadily declined between 2004 and 2010, falling to 85% of the 2004 figure.

NI Manufacturing employee jobs figures have then increased steadily from 2010 to 2014 now standing at 90% of the 2004 figure.

Manufacturing jobs in GB have been in decline from 2004 until 2010 before increasing slightly to the 2011 figure and then declining again to the June 2013 figure of 76%. Between June 2013 and March 2014 there was some growth with the estimate standing at 78% of the June 2004 level in March 2014.

Changes in the Structure of Manufacturing Jobs (NI)

Over the period 2004-2014, Manufacturing jobs in NI decreased by 8,610, with 15 of the 23 manufacturing divisions recording a decrease. The largest decrease occurred in the Manufacture of textiles, which recorded 2,570 fewer jobs. There were 1,690 fewer jobs in the Manufacture of other non-metallic mineral products, 1,630 fewer jobs in the Manufacture of computer, electronic and optical products and 1,610 fewer in the Manufacture of wearing apparel.

However, these decreases were partially offset by increases in the Manufacture of food products (+1,200 jobs), in Manufacture of basic pharmaceutical products and pharmaceutical preparations (+960 jobs) and in the Manufacture of fabricated metal products, except machinery and equipment (+870 jobs).

The large decline in the Manufacture of Textiles, Wearing Apparel and Leather Products sectors has impacted on the structure of Northern Ireland Manufacturing jobs. In 2004 7.7% of Manufacturing jobs were located in the Textiles, Wearing Apparel and Leather sectors; by 2014 this had fallen to 3.1%.

¹ Figures for females in the construction industry are not seasonally adjusted. ² Covers Industry Sections A, B, D and E which have not been seasonally adjusted. ³ Public and Private splits may not sum to total. ⁴ Royal Mail plc was reclassified from the public sector to the private sector in Q4 2013. It is therefore included in the public sector for Q3 2013and earlier periods, but not for subsequent periods. ⁵ Lloyds Banking Group and its subsidiaries were classified to the public sector from Q4 2008 to Q4 2014. They are therefore included in public sector estimates from Q4 2008 to Q4 2013 but not in earlier or subsequent periods. ⁶ Due to revisions in the QES sampling methodology, a discontinuity in the jobs series exists for all estimates from Q3 2009 onwards. For more details please follow link: <a href="http://www.detini.gov.uk/deti-stats-index/stats-surveys/stats-ge

Annual Survey of Hours and Earnings

The Annual Survey of Hours and Earnings (ASHE) provides information on employees' hourly, weekly and annual earnings by gender and working pattern. It has been designed by the Office for National Statistics and is carried out in Northern Ireland by NISRA statisticians. Both median and mean results are reported by ASHE, where the mean is the arithmetic average while the median is the value below which 50 per cent of employees fall. The median is often preferred for earnings data as it is influenced less by extreme values and because of the skewed distribution of earnings data.

The median gross weekly earnings for all (i.e. both full- and part-time) employees in NI in 2013 was £367, some 12.0% lower than the UK (£417). This represented a growth in NI median earnings for all employees of 1.7% over the year to April 2013, compared to the UK, where earnings increased by 2.6%.

NI full-time employees' median gross weekly earnings at April 2013 were £460, which was 88.9% of the figure in the UK (£518). NI full-time earnings increased by 0.5% over the period, compared to an increase of 2.2% in the UK. The median gross weekly part-time earnings in NI at April 2013 was £154, up 3.8% over the year compared with an increase of 3.1% in the UK (to £160).

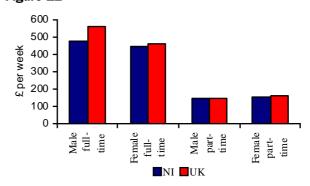

Median gross weekly earnings for full-time employees in the NI private sector increased at the same rate as the UK (2.3%) over the period, to ±403 and ±490 respectively. This represented no change to the NI/UK private sector pay gap which remains at 82.1% of the UK figure.

There has been a widening of the gender pay gap for all employees in NI over the period 2012-2013. Female median hourly earnings excluding overtime were 89.7% of male earnings at April 2013, compared to 90.6% a year earlier. The NI gender pay gap remains less marked than in the UK, where the equivalent female to male earnings ratio was 80.3% at April 2013. It should also be noted that gender pay differences continue to exist for various occupational and industry groupings in NI, as evidenced by weekly and annual earnings trends.

Please note, changes in NI earnings over the year and relative to the UK can be influenced by a range

of factors including the timing of pay settlements, the extent of overtime, and differences in the composition of the workforce. As ASHE is a sample survey, results are also subject to an associated level of sampling variability. Further information is available in section 12 of the ASHE publication: Background notes for ASHE

Vacancy Statistics and Employment & Training

7

Due to improved data validation and cleansing, the way we publish information is changing. Data will now only be published in this report following publication on the DEL website

http://www.delni.gov.uk/index/statsandresearch.htm. Information in Table 18 relating to Steps to Work and Training for Success will only be updated on a quarterly basis. The next Steps to Work Factsheet will be published on 17th September 2014 and the next Training for Success Bulletin will be published on 26th November 2014.

Employment & Training Measures Participation in the Department for Employment and Learning Schemes to July 2014 Table 18

Table 10

June	-	150	550	-
July	-	150	550	-

Figures in the above table are not National Statistics.

(1) Figures are rounded to the nearest fifty.

⁽²⁾ On 29th September 2008, Steps to Work was widely introduced in NI and subsumed the main New Deal programmes. However, Steps to Work was not introduced in the Foyle and Lisnagelvin office areas until 25th July 2011. Figures relate to the last Friday of each month and are revised on a quarterly basis. A data cleansing exercise in August and September 2012 has resulted in changes to previously published data. Statistics for April, May and June 2014 will be published in October 2014 and statistics for July 2014 will be published in January 2015.

⁽³⁾ Training for Success (TfS), was introduced in September 2007 and replaced the Jobskills programme. In September 2008, TfS was restructured into two separate provisions, TfS and ApprenticeshipsNI (AppsNI). Programme-Led Apprenticeships (PLA) were introduced from 7th September 2009 as an intervention measure to respond to the economic downturn. The figures presented in this table under the TfS heading include AppsNI, PLA and TfS. Figures relate to the last Friday of the month and are revised on a quarterly basis. Statistics for May, June and July 2014 will be published in December 2014.

Vacancies Data

The information in Table 19 was first published in the Vacancies Bulletin on 28th August 2013. After a quality assurance exercise carried out within the Department for Employment and Learning errors were discovered. These errors have now been corrected. For a full description of the revisions made please see the 'Description of Revisions' document available at www.delni.gov.uk/vacanciesstatistics-2013.

Headline figures are presented for vacancies which have been notified to JobCentres / Jobs & Benefits offices (J&Bo) of the Department for Employment and Learning (DEL). A small proportion of vacancies notified are based in the UK mainland or in the Republic of Ireland. The statistics do not represent the total unsatisfied demand for staff by employers, but are only those vacant positions notified by employers to DEL. Vacancy inflow and outflow figures are shown on a standardised basis, where values are converted to a standard 4 1/3 week period.

Standardised Notified Vacancies (Inflow)

There were 4,419 vacancies notified in the period ending 7th June 2013. This was 6% lower than the number of vacancies notified in June 2012 (4,677) and an increase of 13.5% on the number of vacancies notified in June 2011 (3,894).

Standardised Filled and Cancelled Vacancies (Outflows)

The number of filled and cancelled vacancies in the period ending 7th June 2013 was 5,698. This was an increase of 30% from June 2012 (4,393) and an increase of 45% from June 2011 (3,924).

Unfilled Vacancies

A total of 6,943 vacancies remained unfilled on 7th June 2013, an increase of 6% on the unfilled total in June 2012 (6,536) and an increase of 45% on the amount unfilled in June 2011 (4,799). On 7th June 2013, the number of unfilled vacancies available to jobseekers was 2,380, a decrease of 12% on June 2012 (2,707) and an increase of 44% on June 2011 (1,653).

	07-Jun	5,099	4,419	-6%	6,575	5,698	30%	6,943	6%	2,380	-12%

Figures in the above table are not National Statistics.

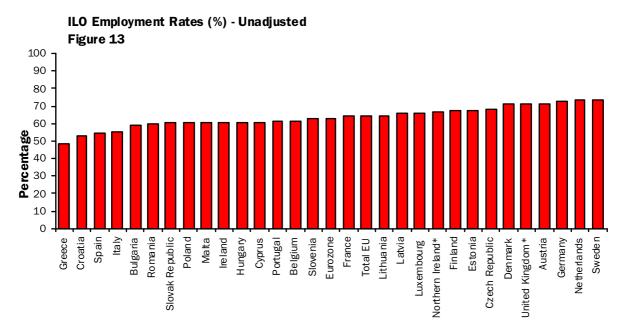

- (1) Notified vacancies (inflow) are all vacancy positions notified and added to JobCentres / J&Bos of DEL.
- (2) Outflows are those vacancies that have been notified to JobCentres / J&Bos of DEL and have been filled or cancelled. This includes vacancies filled by JobCentres / J&Bos or other recruitment channels and vacancies that have been withdrawn.
- (3) Unfilled vacancies are those vacancies notified to JobCentres / J&Bos of DEL remaining unfilled on the count date (the first Friday after the first Thursday of every month). Unfilled vacancies can be split into live and pended. Live vacancies are those for which job seekers can apply. Vacancies are pended while DEL staff await feedback from employers.
- (4) Monthly flow data is collected for a 4 or 5 week period between count dates. Unadjusted levels reflect either a 4 or 5 week period.
- (5) Standardised levels convert volumes to a standard 4 1/3 week month. Figures are not seasonally adjusted.
- (6) Percentage change calculated using non-rounded standardised figures.

For further details of Vacancy Statistics and Employment and Training Measures visit the DEL website at the following link: http://www.delni.gov.uk/index/statsandresearch.htm or alternatively contact the Department for Employment and Learning (DEL) by telephoning (028) 9025 7609.

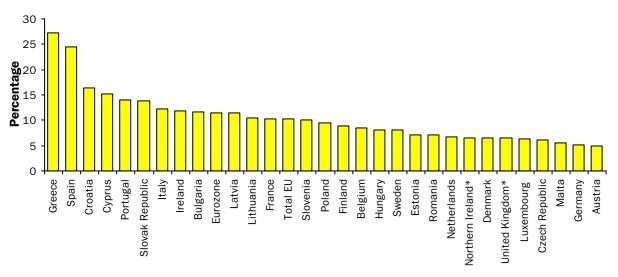

International - Regional Analysis

International Comparisons of ILO Employment and Unemployment

Unemployment Rates (%) - Seasonally Adjusted Figure 14

Source: Eurostat

* A NI employment rate comparable to the EUROSTAT figures has been produced from the Calendar Quarter 1 2014 LFS dataset. It is based on the population aged 15-64 and differs from the working age rates published elsewhere in this publication, which take account of both the school-leaving and state pension age. The employment rate for the UK as published by EUROSTAT differs from the working age rate (16-64) published by ONS for the same reason. Figures behind the charts and further information can be found at; International Comparisons of Employment

¹ Employment and economic inactivity rates are based on working age population (16-64); Unemployment rates are based on 16+ population.

² Data refer to percentage point change of respective rate.

³ As at March 2014 (thousands).

⁴ As at August 2014: percentage of the workforce.

⁵ Not seasonally adjusted – data relates to 2012. Jobs Density – total number of jobs in an area divided by the resident population of working age in that area.

Further Information

Unemployment

The definition of unemployment used in the Labour Force Survey (LFS) is in accordance with that promulgated by the International Labour Organisation (ILO). The ILO unemployed include those without a job who were able to start work in the two weeks following their LFS interview and had either looked for work in the four weeks prior to interview or were waiting to start a job they had already obtained.

Unemployment rate - the percentage of economically active people who are unemployed. Please note that it is possible for the number of unemployed to increase and the unemployment rate to fall during the same period, as the latter measure is a ratio e.g. if the number of economically active has increased at a faster rate than the number unemployed, the unemployment rate will fall.

Employment

The definition of ILO employed applies to anyone (aged 16 or over) who has done at least one hour's paid work in the week prior to interview, or has a job they are temporarily away from (e.g. on holiday). Also included are people who do unpaid work in a family business and people on Government-supported employment training schemes.

The ILO measures are particularly useful for examining short term and long term trends over time and key LFS time series data are available both seasonally adjusted and unadjusted.

Sampling variability

The LFS is a sample survey, and as such, estimates obtained from it are subject to sampling variability. If we drew many samples each would give a different result. The ranges shown for the LFS data in table 1 represent 95% confidence intervals i.e. we would expect that in 95% of samples the range would contain the true value. These confidence intervals have been calculated using data that is unadjusted for seasonality, with the relevant sampling errors produced applied to the seasonally adjusted data.

If the 'annual change' for an estimate has increased or decreased by more than the 'sampling variability of the change', this change would be statistically significant. The annual changes for the main LFS categories of employment,

unemployment and economic inactivity were tested for statistical significance. The results showed that none of the annual changes, for May - July 2014, were statistically significant over the year, i.e. the recorded change did not exceeded the variability expected from a sample survey of this size and was likely to reflect a real change.

Please see attached link for further LFS notes and definitions:

Labour Force Survey Notes and Definitions

LFS revisions

In April - June 2012 the LFS data was revised to incorporate the latest population estimates, the revisions apply to June - August 2009 onwards. The magnitude of the revisions are relatively small, with the revisions to the unemployment rate falling within +/- 0.1 percentage points and the working age employment rate with in +/- 0.2 percentage points. The procedures being applied to the NI LFS results are consistent with those applied by the Office for National Statistics to other UK regions

More information on the revision policy concerning labour market statistics can be found through the link below:

Labour market statistics revisions policy

Definition of 'working age'

The 'working age' definition, used in the calculation of employment and economic inactivity rates, was changed in August 2010 to include those aged from 16 to 64 for both men and women. Previously these rates were based on upper age limits of 59 for women and 64 for men, reflecting the state pension ages in the UK.

The change in definition follows a UK wide public consultation on the issue and the approach being applied to Northern Ireland labour market statistics mirrors the approach that the Office for National Statistics (ONS) are applying to other UK regions.

For a limited period, employment and economic inactivity rates based on the old working age definition (i.e. 16-59/64) will be available on request.

Hours Worked

Due to current resource pressures, the Office for National Statistics (ONS) has discontinued the publication of the Regional Workforce Hours data series. The Hours worked section now details data on the average actual hours worked as estimated by the LFS.

Claimant Count definition

Claimant Count figures are derived from records of claimants held at Jobs and Benefits Offices. The term 'claimants' in the claimant count is used to include those who claim Jobseeker's Allowance (JSA) and National Insurance credits. The figures include severely disabled claimants, but exclude students seeking vacation work and the temporarily stopped. The Claimant Count is a very up-to-date measure of those eligible to claim a specific unemployment related benefit and data are available for a range of geographical sub-regions (e.g. District Council Areas, Parliamentary Constituency Areas, Travel-to-Work Areas and Wards). It also provides seasonally adjusted and unadjusted data and as a result is a useful measure for examining both short-term and long-term trends.

Seasonally Adjusted claimant count figures are provisional when published and subject to revision, mainly the following month and are only available at Northern Ireland level. Seasonally Adjusted totals are subject to an annual update, which revises back for 3 years (usually April) to take account of latest assessment trends. The magnitudes of the revisions are relatively small, with the change of the monthly total claimants within +/- 0.8%. For further information see: Claimant Count Revisions

The 'Flows' data contained in section three is sourced to the Official of National Statistics (via the NOMIS website). Claimants appear as flows if they have either joined or left the count in the reference period or if they joined the count in a previous period, but were only processed during the reference period.

Universal Credit

In November 2010 the government announced plans to reform the welfare system by creating a new Universal Credit. The new benefit will replace many of the current separate welfare benefits, as well as subsuming in-work support currently administered through tax credits. Among those benefits to be replaced is the means-tested element of Jobseeker's Allowance (JSA) which makes up a significant proportion of the monthly Claimant Count.

Universal Credit will progressively roll out from October 2013 in GB and Initially new claimants will begin to move to Universal Credit instead of Jobseeker's Allowance, with a migration of the existing caseload and recipients of other welfare benefits following at a later date. ONS aims to include these new Universal Credit claimants in the Claimant Count in line with the proposals laid out in its recent:

Consultation on the production and dissemination of Claimant Count statistics following the introduction of Universal Credit.

Further details will be available nearer the time.

Annual Survey of Hours and Earnings

Please note, changes in NI earnings over the year and relative to the UK can be influenced by a range of factors including the timing of pay settlements, the extent of overtime, and differences in the composition of the workforce. As ASHE is a sample survey, results are also subject to an associated level of sampling variability. Further information is available at:

ASHE statistical bulletin

below.

<u>Definitions for the Annual Survey of Hours and Earnings ASHE</u>

Quarterly Employment Survey (QES) Revisions QES estimates are revised quarterly to reflect the latest information provided to the Department by employers. The March 2014 seasonally adjusted estimate first published in June 2014 has subsequently been revised down (0.1%). For further details of QES revisions please see link

Background notes to the Quarterly Employment Survey (QES)

Government Targets

Data from the Labour Force Survey (LFS) and the Quarterly Employment Survey (QES) are used in the measurement of targets set in the Northern Ireland Executive's Programme for Government (PSA targets) See Programme for Government for further details. The LFS and QES data feed into productivity estimates for NI and are therefore indirectly used to measure progress towards PSA 1: Productivity growth. In addition, LFS data is used to measure the proportion of the working age population qualified to Skill levels 2 and 3. This data therefore feeds into the measurement of PSA 2: Skills for prosperity.

Details of progress towards these targets can be found at:

Programme for Government Delivery Report
