Key points

This statistical bulletin provides users with the latest estimates of construction output carried out in Northern Ireland for Q2 2019. It excludes work carried out by Northern Ireland Construction firms in other parts of the UK or elsewhere.

The total volume of construction output in the second quarter of 2019 decreased by 5.6% compared with Q1 2019, and was 1.5% lower than the same quarter in 2018 (Figure 1). Despite fluctuations, the total volume of construction output in NI has been on an upward trend since Q4 2013.

The decrease in the overall output in Q2 2019 from the previous quarter was driven by a 6.0% decrease in Repair and Maintenance and a 2.8% decrease in New Work.

In Q2 2019, there was an increase in Infrastructure (+2.4%) and decreases in Housing (-10.7%) and Other Work (-5.6%) compared with the previous quarter.

Figure 1: Volume of Construction Output in NI
National Statistics

National Statistics status means that official statistics meet the highest standards of trustworthiness, quality and public value, and it is our responsibility to maintain compliance with these standards.

The United Kingdom Statistics Authority has designated these statistics as National Statistics following a full assessment in March 2012. The assessment was undertaken in accordance with the Statistics and Registration Service Act 2007 and signifying compliance with the Code of Practice for Official Statistics.

It is NISRA’s responsibility to maintain compliance with the standards expected of National Statistics. If we become concerned about whether these statistics are still meeting the appropriate standards, we will discuss any concerns with the Authority promptly. National Statistics status can be removed at any point when the highest standards are not maintained, and reinstated when standards are restored.

Since the assessment by the UK Statistics Authority, we have continued to comply with the Code of Practice for Statistics, and have made the following improvements:
- Removed pre-release access to enhance trustworthiness, with the view to bring the publication date forward.
- Transferred data to an improved case management system (Integrated Business Survey System).
- Made improvements to the data collection process to standardise with other business surveys and ensure best practice is followed.
- Reduced business burden by offering the option of online data returns.

Quarterly Construction Enquiry 2019 Quarter 2 Infographic

2019 Quarter 2 Compared with 2019 Quarter 1 – Variables

- **NEW WORK**: 2.8%
- **HOUSING**: 10.7%
- **INFRASTRUCTURE**: 5.6%
- **REPAIR AND MAINTENANCE**: 6.0%
- **OTHER WORK**: 2.4%

Overall Construction

- **Quarterly Change**: -5.6%
- **Annual Change**: -1.5%

Date Published - 10th October 2019 – 09:30
2 Introduction

The Construction Output Statistics published in the Northern Ireland Construction Bulletin are intended to provide a general measure of quarterly and annual changes in the volume and value of construction output in Northern Ireland. These figures are produced from the Northern Ireland Quarterly Construction Enquiry (QCE) which is a statutory survey of construction firms operating in Northern Ireland, collected under the Statistics of Trade and Employment (Northern Ireland) Order 1988. Each quarter, a sample of approximately 750 construction firms are asked to provide details of the value of construction activity they have undertaken in a specified period. The survey also covers public sector organisations (for example, the DfI Roads) undertaking their own construction activity.

The Construction Output estimates are published as Chained Volume Measures. Chained Volume Measures show volume trends in construction output over time by removing inflationary price effects.

Main uses of Construction Output Statistics

The Construction Output statistics are used by National Accounts in the calculation of the output measure of UK Gross Domestic Product (GDP) and also by the Northern Ireland Composite Economic Index (NICEI) in the calculation of the Economic Output of the Northern Ireland Economy. The results are used by Northern Ireland Government Departments, Economists, Construction Industry Analysts and Academics to understand the state of the construction sector and the broader economy in Northern Ireland. A summary of the main usage of Northern Ireland Construction Output Statistics is also available.
3 Context

The latest regional Gross Value Added (GVA) data for Northern Ireland indicates that the construction industry was estimated to account for 7.2% of regional GVA in 2017. Consequently, the construction industry is considered to be an important element of the Northern Ireland economy and this explains why there is so much interest in the construction output statistics.

Other Key Economic Indicators and the Wider Economy

The Construction Output Statistics are one of a number of economic indicators which provide an overview of the Northern Ireland Economy. Information on other key Northern Ireland economic indicators can be found below. Together they provide users with a comprehensive account of how the Northern Ireland Economy is performing across a range of indicators. Figures on the Northern Ireland Labour Market are published monthly.

Other key economic indicators measuring the performance of the Northern Ireland economy exist for the Production and Service sectors. The Index of Production (IoP) and the Index of Services (IoS) are derived from separate surveys of businesses in the production and service sectors. The IoP and the IoS are published quarterly.

The Northern Ireland Composite Economic Index (NICEI) has been developed using data from existing quarterly indices of output from the Production, Services and Construction sectors. These sources have been combined (on the basis of industry share of GVA) with Agricultural output data and employee jobs data for the public sector to provide a seasonally adjusted and deflated measure of change in economic activity.

The Department for the Economy (DfE) also produces an Economic Commentary which provides an overview of the state of the Northern Ireland economy, setting it in context with the UK and the Republic of Ireland.

Other Information

Additional information relating to the construction sector in Northern Ireland can be found online, this includes provision of information related to the following:

- Type of construction firms operating in Northern Ireland;
- Number of people employed in the construction industry in Northern Ireland;
- Average earnings in the construction industry in Northern Ireland; and
- Reported accidents in the construction industry in Northern Ireland.

Additional Background Notes for this publication, including definitions, the methodology used, revisions to previous published data and information on data quality, can be found within the methodology section online.

Similar statistics on Construction Output for Great Britain are published by the Office for National Statistics, noting that in 2019, the Great Britain Construction publication was re-designated as National Statistics.
4 Construction Output Summary
Quarter 2 (April to June) 2019

Overall Output

Construction Output: Construction activity measured by the Quarterly Construction Enquiry includes general construction and demolition work, construction and repair of buildings, civil engineering, installation of fixtures and fittings and any other building completion work.

The total volume of construction output in the second quarter of 2019 decreased by 5.6% compared with Q1 2019, it was 1.5% lower than the same quarter in 2018 but increased by 1.7% on a rolling four quarter basis (Figure 1). Despite fluctuations, the total volume of construction output in NI has been on an upward trend since Q4 2013.

Figure 1: Volume of Construction Output in NI

Index (Base=2016)

Chained Volume Measure Prices

Base Line(Index =100)

Q2 2009, 119.4
Q4 2013, 76.8
Construction Output - New Work and Repair and Maintenance

In Q2 2019, New Work accounted for around two thirds (66.3%) of all construction output, whilst Repair and Maintenance accounted for around one third (34.2%). New Work, historically in Northern Ireland, has been the largest sub-component of Overall Construction Output.

(Please note percentages do not always tally to 100 as each category is individually deflated and seasonally adjusted)

New Work

New Work: is any new construction activity for example, factory and office extensions, major reconstruction, major alterations, site preparation and demolition.

In the second quarter of 2019, the volume of New Work decreased by 2.8% compared with the previous quarter, but has seen increases of 4.9% compared with the same quarter in 2018 and 2.6% on a rolling four quarter basis. Although fluctuating, the volume of new work output has been increasing since the most recent low point in 2013 Q4 (Figure 2).

Figure 2: Volume of New Work Output in NI

Chained Volume Measure Prices Base Line(Index = 100)
Q4 2013, 69.1
Q3 2009, 138.3
Repair and Maintenance

**Repair and Maintenance:** is all on-site work not defined as new construction, for example, housing conversions, extensions and improvements.

In Q2 2019, Repair and Maintenance Output decreased by 6.0% compared with the previous quarter, it was 12.0% lower than the same quarter in 2018 and no change on a rolling four quarter basis (Figure 3).

**Figure 3: Volume of Repair and Maintenance Output in NI**

![Graph showing the volume of repair and maintenance output in NI from Q4 2009 to Q2 2019. The graph indicates a decrease in output between Q4 2009 and Q2 2019, with a peak in Q3 2018 at 113.6.](image)

Construction Output – Housing, Infrastructure and Other Work

In Q2 2019, the two largest sub-sectors were Housing and Other Work which each accounted for 36.5% of all construction output, followed by Infrastructure (27.4%). Figure 4 shows that Housing and Other Work have historically been the largest sub-sectors of Construction Output in Northern Ireland.

(Please note percentages do not always tally to 100 as each category is individually deflated and seasonally adjusted)
Housing Output

Housing Output: is defined as all public and private sector construction activity (New Work and Repair & Maintenance) associated with Housing.

The volume of Housing Output in the second quarter of 2019 decreased by 10.7% compared with the previous quarter, was 8.6% lower than the same quarter in 2018 however increased by 1.9% on a rolling four quarter basis (Figure 5). Despite fluctuations, Housing Output has been steadily improving since a low point in Q4 2013, although it remains well below historic levels.
Figure 5: Volume of Housing Output in NI

Figure 6 shows that in Q2 2019 there were decreases in Housing output levels in all sub sectors (New Work Housing Private, New Work Housing Public, Repair and Maintenance Housing Private and Repair and Maintenance Housing Public) compared with the previous quarter.

Figure 6: Housing Output broken down by its sub-components
**Infrastructure Output**

**Infrastructure Output**: is defined as all public and private sector construction activity (New Work and Repair & Maintenance) associated with roads, bridges, car parks, footpaths, water, sewage, electricity, gas, communications, air transport, railways, harbours and waterways.

The volume of Infrastructure work in the second quarter of 2019 increased by 2.4% compared with the previous quarter, was 27.6% higher than the same quarter in 2018 and 20.0% higher on a rolling four quarter basis (Figure 7). The volume of Infrastructure Output is now at the highest level since Q1 2012.

**Figure 7: Volume of Infrastructure Output in NI**

![Graph showing the volume of Infrastructure Output in NI from 2009 to 2019. The index is on a scale from 80 to 140, with Q2 2009 at 130.8 and Q3 2014 at 81.0. The graph shows a trend of fluctuating values with a peak in Q1 2012.](image_url)
The Q2 2019 rise was due to increases in New Work Infrastructure Private, New Work Infrastructure Public and Repair and Maintenance Infrastructure Private subsectors (Figure 8). Repair and Maintenance Infrastructure Public was the only subsector to not see an increase this quarter.

Figure 8: Infrastructure Output broken down by its sub-components

![Graph showing infrastructure output broken down by sub-components from 2009 to 2019.](image)

*Please note before 2014 all Repair and Maintenance Infrastructure work was assumed to be public, this was reviewed when the survey changed in 2014.*

Other Work Output

**Other Output**: is defined as all public and private sector construction activity (New Work and Repair & Maintenance) associated with the following; Industrial, for example, factories and warehouses or else Non-industrial, for example, schools, health centres and banks.

The volume of Other Work in Q2 2019 decreased by 5.6% compared with the previous quarter, was 9.3% lower than the same quarter in 2018 and 8.1% lower on a rolling four quarter basis. This annual decrease was largely due to a steep decline between Q3 2018 and Q4 2018 (Figure 9).
The decrease in Other Work in Q2 2019 was accounted for by decreases in the levels of New Public Other Work, Repair and Maintenance Public Other Work and Repair and Maintenance Private Other Work.

Figure 10: Other Work Output broken down by its sub-components
5 Survey Response

Response rates provide an indication of the accuracy of final estimates. For the quarter 1\textsuperscript{st} April to 30\textsuperscript{th} June 2019, 79\% of firms in the sample participated in the survey. A breakdown of valid response by stratum is highlighted below. Non-response bias is a potential issue for all statistical surveys. Non-response bias occurs where the responses of respondents differ from potential responses of non-respondents. The risk of non-response bias on the Northern Ireland Quarterly Construction Enquiry is minimised by the ongoing efforts to maximise response rates across all strata. Users should also be aware that a Census is taken of large firms (Strata 5 and 6) and these firms collectively account for approximately three-fifths of total construction turnover based on the Inter-Departmental Business Register (IDBR). More information on the quality of the construction output estimates can be found online.
