Note on the analysis of results

The YPBAS data has been weighted by year group and gender to compensate for non-response bias among these subgroups.

The following tables of top-line results show the weighted frequencies of responses and associated percentages. Survey findings are reported as a percentage of the total number of respondents who provided a response to that particular question. This means that the valid total number of respondents will vary from one question to another. Also, frequencies of responses may not sum exactly to the valid total shown in some tables, due to the rounding effects of weighting.

For questions which were not answered or not reached by respondents, survey findings are reported as 'Unanswered' and defined as missing values. Similarly, for questions which were not asked of respondents in particular year groups, survey findings are reported as 'Not asked of respondents in years 8-10' and defined as missing values.

In order to meet clients' increasing demands for more questions and modules on this popular survey, the steering group agreed that the questionnaire would be split into two versions, A and B. Some questions would be asked in both versions of the questionnaire, i.e. demographics and those questions asked only of certain year groups. Thus, top-line results have been presented as follows: questions common to both version A and B, questions pertaining solely to version A and questions pertaining solely to version B.
