It would be useful if data could be disaggregated on both sexual orientation and other demographics, including sex (in lieu of gender data). this is particularly important should the lesbian, bisexual and gay categories be collapsed. It is likely there will be some women who will have identified as 'gay', as well as bisexual men recorded in the bisexual output. We would like to be able to separate LGB women from collapsed outputs. We appreciate depending on the number of responses this may restrict other cross-tabulations such as geography.
