

**STATISTICS PRESS NOTICE –  
REGISTRAR GENERAL  
QUARTERLY REPORT  
(Provisional Statistics for Quarter 1  
2021)**

**9:30am Wednesday 23<sup>rd</sup> June 2021**

**Registrar General Quarterly Report:  
Provisional Statistics for Quarter 1 2021**

The Northern Ireland Statistics and Research Agency (NISRA) has today published the Registrar General Quarterly Report: Quarter 1 2021 that provides details regarding deaths, births, marriages and civil partnerships.

The statistics, which cover 1<sup>st</sup> January to 31<sup>st</sup> March 2021, show there was a provisional total of 4,866 deaths registered. The rate of deaths per 1,000 population increased from 10.1 in Quarter 4 2020, to 10.3 in Quarter 1. Covid-19 was the underlying cause of 921 (18.9%) of these registered deaths. This brings the provisional total number of registered deaths with an underlying cause of death of Covid-19 to 2,547 (11.3%) since the start of 2020.

In comparison, the provisional number of deaths where Covid-19 was *mentioned anywhere* on the death certificate since the beginning of 2020 was 2,916. This means that Covid-19 was the underlying cause of death in 87.3% of all deaths that mentioned Covid-19 on the death certificate.

Following the introduction of new codes within the International Classification of Diseases 10 (ICD-10) by the World Health Organisation in March 2021, the statistics also show that there was one death registered during Quarter 1 2021 where an adverse effect of the COVID-19 vaccine was the underlying cause of death .

The provisional number of deaths in Quarter 1 2021 where the underlying cause was cancer was 1,097 (22.5%), 353 (7.3%) were due to non-covid respiratory conditions and 461 (9.5%) were due to ischaemic heart disease. On average, over the previous five years (2016-2020) 27.9% of annual deaths were due to cancer, 12.4% from respiratory conditions and 10.0% from ischaemic heart disease.

There were 76 suicide deaths (including events of undetermined intent) registered in Quarter 1 2021. These data should not be interpreted as the number of suicides *occurring* during Quarter 1, however, due to the time lag for such deaths to be investigated by the Coroner and then subsequently registered. In 2020, the provisional number of suicides registered totalled 263.

During the Quarter, 5,632 births, 676 marriages and 6 civil partnerships were registered. For comparative purposes there were 5,250 births, 865 marriages and 8 civil partnerships registered in the same Quarter of 2020. However, both of these time periods have been impacted by the Covid-19 pandemic and associated social restrictions. It should be noted that the number of births registered may not be a true reflection of births occurring in Quarter 1 as Register Offices have given continued priority to death registrations.

Of the 676 registered marriages in Quarter 1, 92 (13.6%) were same sex marriages (including both civil and religious marriages). Over half (57.6% or 53) of the 92 same-sex marriages were female unions. Almost four-fifths (79.3%) of same-sex marriages were conversions from a previous civil partnership. No opposite-sex civil partnerships, nor conversions from a previous marriage, were registered in Northern Ireland in Quarter 1 2021.

## NOTES TO EDITORS

1. The "Registrar General Quarterly Report - Quarter 1, 2021" contains standard, provisional statistics based on information sourced from the General Register Office relating to vital events in Northern Ireland which were registered from 1 January to 31 March 2021. Quarterly statistics on births, deaths, marriages and civil partnerships registered in Northern Ireland can be found at: <https://www.nisra.gov.uk/publications/registrar-general-quarterly-tables-quarter-1-2021>
  
2. Differences between NISRA's weekly provisional COVID-19 death statistics and the quarterly provisional totals reported here are as follows:
  - NISRA weekly, provisional death statistics, which are based on death registration information collected by the General Register Office, count all deaths where COVID-19 was **mentioned** on the death certificate by the doctor who certified the death, whether or not COVID-19 was the primary underlying cause of death. The figures include cases where the doctor noted that there was suspected or probable coronavirus infection involved in the death.
  
  - Statistics quoted in the Quarterly Report are presented based on the **primary underlying cause** of death, which have been classified using the tenth revision of the International Statistical Classification of Diseases, Injuries and Causes of Death (ICD10). As a result the weekly totals will usually be higher than the quarterly figures quoted - because the weekly mentions include cases which go on to be coded as not having COVID-19 as the underlying cause of death.
  
  - From the week beginning 22 March 2021 (week 12), new ICD-10 codes issued by the World Health Organisation (WHO) were also used alongside the two codes that were previously used to code deaths involving COVID-19. The new code contributing to the total number of deaths due to Covid-19 is U10.9 (Multisystem inflammatory syndrome associated with COVID-19, also referred to as the 'Kawasaki-like syndrome', which is an uncommon effect of COVID-19). This is counted in addition to the existing codes U07.1 (COVID-19, virus identified through laboratory testing) and U07.2 (COVID-19, virus not identified, but COVID is suspected through clinical or epidemiological diagnoses). In addition, the following new codes have also been introduced: U08.9 Personal history of COVID-19, unspecified; U09.9 (post-COVID condition, where the death occurred after rather than during acute or ongoing COVID-19); U11.19 Need for immunisation against COVID-19, unspecified; and U12.9 COVID-19 vaccines causing adverse effects in therapeutic use, unspecified. (ICD-10) codes U08.9, U09.9, and U11.9 cannot be assigned the underlying cause of death.
  
3. Death Statistics in Northern Ireland are based on deaths which have been registered with the General Register Office (GRO). There are some situations where the registration of the death can be delayed, specifically where the death has been accidental, unexpected or suspicious, and must be referred to the Coroner.  
A death which is suspected to be suicide must therefore be referred to the Coroner and can only be registered after the Coroner has completed his/her investigation. The time taken to carry out this investigation can result in a delay in registration. Given the delay in registration of suicide deaths, these deaths may not appear in published statistics until subsequent years.

4. Since 2001, in line with the rest of the UK, the tenth revision of the International Statistical Classification of Diseases, Injuries and Causes of Death (ICD10) is used to classify cause of death. The codes used for 'Suicide and self-inflicted injury' are X60-X84 and Y87.0 and the codes used for 'Undetermined intent' are Y10-Y34 and Y87.2. At present, NISRA recommends that users of suicide statistics wishing to carry out *trend analyses* refer to the subset of **self-inflicted harm only (ICD-10 codes X60-X84, Y87.0)**. This is due to an ongoing review in relation to the quality of reported suicide figures relating to the 'undetermined intent' subseries, for the period 2015-2018. Details of the review are outlined in the 'Guidance Note to Users on Suicide Statistics in Northern Ireland' published on 30<sup>th</sup> July 2020 and available at:  
<https://www.nisra.gov.uk/sites/nisra.gov.uk/files/publications/Guidance%20Note%20to%20Users%20Northern%20Ireland%20Suicide%20Statistics.pdf>.
5. Due to the coronavirus situation, a number of registrations offices reduced routine processing of births and marriage registrations with effect from 15<sup>th</sup> March 2020, and continued priority was given to death registrations. As a result, the number of births and marriages registered during Quarter 2 2020 were unusually low and birth registrations during the 3<sup>rd</sup> Quarter of 2020 unusually high.
6. Corresponding information for England and Wales is published by the [Office for National Statistics](#) and for Scotland by the [National Records of Scotland](#). Similar figures for the Republic of Ireland are available from the Central Statistics Office Ireland.
7. The Northern Ireland (Executive Formation etc) Act 2019 enabled same sex civil marriages through the Marriage (Same-sex Couples) and Civil Partnership. The regulations came into force on the 13 January 2020 with the first same sex civil marriage taking place on the 11 February 2020. The legislation also enabled opposite sex civil partnerships to take place. On the 1 September 2020 the Marriage and Civil Partnership (NI) Regulations 2020 introduced same sex religious marriage. From the 7 December 2020 the Marriage and Civil Partnership (NI)(No2) Regulations 2020 allowed a same sex couple to convert a previous civil partnership to a marriage. The regulations also permitted opposite sex couples to convert a previous marriage to a civil partnership.
