Key Points

- The latest Labour Force Survey (LFS) estimates for the period December-February 2019 indicate that over the quarter, the unemployment rate decreased while the employment rate increased and the inactivity rate decreased.

- The unemployment rate is the joint lowest on record and the employment rate is the highest on record.

- The LFS indicated that the NI unemployment rate (16+) decreased over the quarter (0.5pps) and the year (0.4pps) to 3.0% in December-February 2019. Although the recent changes were not statistically significant, the unemployment rate was significantly below rates in mid 2017. The NI unemployment rate was below the UK rate (3.9%), the Republic of Ireland rate (5.3%) and the EU rate (6.5%).

- The proportion of people aged 16 to 64 in work (the employment rate) increased over the quarter (1.4pps) and increased over the year (1.8pps) to a record high of 71.2%. The quarterly change was statistically significant. The latest employment rate recorded for the whole of the UK was 76.1%.

- The NI economic inactivity rate (the proportion of people aged from 16 to 64 who were not working and not seeking or available to work) decreased by 1.0pps over the quarter and 1.5pps over the year to 26.6%. Although the recent changes were not statistically significant, the inactivity rate was significantly below rates in mid-2017. The latest inactivity rate recorded for the whole of the UK was 20.7%.

- The number of confirmed redundancies (2,357) in the most recent 12 months was 24% higher than in the previous 12 months (1,906).

- The number of proposed redundancies in the last month (mid-March to mid-April) were the highest reported since late 2015.

NATIONAL STATISTICS STATUS

National Statistics status means that our statistics meet the highest standards of trustworthiness, quality and public value, and it is our responsibility to maintain compliance with these standards.

These statistics were designated as National Statistics in August 2010 following a full assessment against the Code of Practice.

Since the assessment by the UK Statistics Authority, we have continued to comply with the Code of Practice for Statistics, and have made the following improvements:

- Redesigned the Labour Market Report, providing more context to results by setting recent changes within context of longer term trends;
- Removed pre-release access to enhance trustworthiness, and brought forward the publication date as a result;
- Improved timeliness of calendar quarter data (ranging from 1 week to 3 months) by incorporating quarterly tables in the main Labour Market Publication
- Improved quality of the LFS data by boosting the sample size and improving precision around headline estimates
1 Summary of Labour Market Statistics

Updated April 2019

Change over quarter
Seasonally adjusted LFS estimates for Northern Ireland for the period December-February 2019 showed that, over the quarter:

- the unemployment rate decreased by 0.5pps to 3.0%
- the employment rate increased by 1.4pps to 71.2%
- the economic inactivity rate decreased by 1.0pps to 26.6%

Not statistically significant
Statistically significant
Not statistically significant

During March 2019 there were:
- 230 confirmed redundancies notified to the Department, higher than the previous month’s revised total of 17.

LFS, claimant count and employee jobs data are seasonally adjusted.
¹ People aged 16 and over. Unemployment rate = total unemployed as a proportion of the economically active.
² Levels for all persons aged 16 and over, rates for working age (16-64).
³ Confirmed redundancies in the calendar month, not seasonally adjusted.
NI Labour Market Structure: Change over year

Seasonally-adjusted LFS estimates for Northern Ireland for the period December-February 2019 showed that over the year:

- the unemployment rate decreased by 0.4 pps (to 3.0%) Not statistically significant
- the employment rate increased by 1.8 pps (to 71.2%) Not statistically significant
- the economic inactivity rate decreased by 1.5 pps (to 26.6%) Not statistically significant

Over the latest twelve month period there were:

- 2,357 confirmed redundancies which was an increase of 24% from the previous year (1,906).

Figure 1: NI labour market structure: change over year

Note: figures rounded so may not sum

UK summary

Seasonally-adjusted LFS estimates for the UK for the period December-February 2019 showed:

- the joint lowest unemployment rate (3.9%) on record, a decrease of 0.1 pps over the quarter and a decrease of 0.3 pps over the year
- the employment rate (76.1%) increased over the quarter by 0.4 pps and increased by 0.8 pps over the year. The employment rate of 76.1% is the joint highest on record
- the economic inactivity rate (20.7%) decreased over the quarter by 0.3 pps and the year by 0.6 pps. The economic inactivity rate of 20.7% is the joint lowest on record.
Commentary

The unemployment rate for December – February 2019 was estimated at 3.0%, the joint lowest on record, while the employment rate was estimated at 71.2%, the highest on record. Following a decrease of 1.5pps over the year, the inactivity rate, at 26.6%, is one of the lowest on record, and is similar to the relatively low levels seen in 2016.

The improvements in the NI labour market since 2017 are consistent with the UK experience, where unemployment and inactivity are joint lowest on record and employment is at a joint record high. However, it is worth noting, when compared to the other UK regions, NI has the second lowest unemployment rate, the second lowest employment rate and highest inactivity rate.

Further information is available on the NISRA - Economic and Labour Market Statistics website: LMR Headline Tables.

Labour Force Survey, seasonally adjusted and subject to future revisions.

Data published – 16th April 2019
Things users need to know
Estimates derived from the Labour Force Survey (including estimates of employment, unemployment and economic inactivity) are calculated using 2016 based population projections and the 2017 mid-year population estimates. In February 2019, estimates from June - August 2011 to September – November 2018 were revised as a result of the reweighting process (using the latest population estimates) and from a review of the seasonal adjustment process.

Additionally, estimates from November-January 2018 include a boost to the Northern Ireland Labour Force Survey sample. More information on the impact of the reweighting and increased sample size is available in a separate paper.

The experimental Claimant Count data is no longer included in the Labour Market Report. The data tables will continue to be published on the NISRA website and counts will also be available from NOMIS.

Context
The Labour Market Report (LMR) is a monthly overview of Northern Ireland key labour market statistics. It includes figures from the Labour Force Survey (LFS), the Quarterly Employment Survey, the Annual Survey of Hours and Earnings and redundancies data. More information about the data sources can be found in Section 6.

Where available, comparative UK data (produced by the ONS) have been included. The latest labour market statistics are available on the ONS website.

Key users of Northern Ireland labour market statistics include government departments, in particular the Department for the Economy (DfE), which uses the statistics to design and monitor the impact of economic and labour market policy. Other Government departments such as the Executive Office, the Department of Finance (DoF) and the Department of Agriculture, Environment and Rural Affairs (DAERA), as well as bodies such as Invest NI and Belfast City Council, regularly require specific ad hoc labour market analysis in order to monitor policies for example, equality and employment. In addition, significant 'non-governmental' users of labour market statistics (including the media, banks, academics, private consultants and the general public) use the data primarily for reporting or researching the performance of the economy in general. Labour market statistics attract widespread media coverage, with a number of broadcasters publishing articles on the labour market on a monthly basis, generally on the day of publication of the Labour Market Report.

Labour market statistics feature in the DfE Economic Commentary, which provides an overview of the state of the Northern Ireland economy, setting it in context with the UK and Republic of Ireland. The most up-to-date official statistics on the economy and labour market are available on the Economic Overview section of the NISRA website.

Further information on using labour market statistics can be found on the Office for National Statistics (ONS) website:

- Interpreting Labour Market statistics
- Guide to Labour Market Statistics
- Glossary
Labour Force Survey

The Labour Force Survey (LFS) is a household sample survey carried out by interviewing individuals about their personal circumstances and work. It provides a rich source of information on the labour force using internationally agreed definitions. Estimates are subject to sampling error and care should be taken when making inferences (see section 6 for details).

**LFS unemployment**: The International Labour Organisation (ILO) defines unemployed as those aged 16+ without a job who were able to start work in the two weeks following their LFS interview and had either looked for work in the four weeks prior to interview or were waiting to start a job they had already obtained.

**Long-Term Unemployment**: those who have been unemployed for 12 months or more.

**Youth Unemployment**: unemployed people aged 16-24 years.

Key Findings

- LFS unemployment rate in NI decreased over the quarter and the year to a joint record low
- The NI unemployment rate has remained below, or equal to, the UK rate since Sep-Nov 2017
- The UK unemployment rate is at a joint record low at 3.9%

Figure 2: Seasonally adjusted unemployment rate, Dec-Feb 2009 to Dec-Feb 2019 (non-zero axis)

Figure 2 shows unemployment rates on the current 3 month rolling average for NI and the UK over the last decade. The unemployment rate in NI peaked at over 8% in 2012 and reached a joint record low of 3.0% in Dec-Feb 2019. The UK rate fell to the joint lowest on record of 3.9% in Dec-Feb 2019. The NI unemployment rate has been at or below the UK rate since Sep-Nov 2017.
LFS unemployment

The unemployment rate (16+) for the period December-February 2019 was estimated at 3.0%, this was:

- a decrease of 0.5 over the quarter
- a decrease of 0.4 pps over the year

The number of unemployed persons aged 16+ was estimated at 26,000, which was:

- down 4,000 from last quarter
- down 3,000 from the same period last year

UK national and international LFS comparisons

The most recent NI unemployment rate (3.0%) was:

- below the overall UK average rate (3.9%)
- the second lowest rate among the twelve UK regions
- below the European Union (6.5%) and Republic of Ireland (5.3%) rates for January 2019

Long-term and youth unemployment

The percentage of unemployed who have been unemployed for 1 year or more (long-term) was 55.8%, which was:

- up 9.1 pps over the year
- higher than the UK average rate (26.2%).

The youth unemployment rate for December-February 2019 was too small for a reliable estimate.

Further information is available on the NISRA - Economic and Labour Market Statistics website:
LFS unemployment
Redundancies
Under the Employment Rights (Northern Ireland) Order 1996 (Amended 8 October 2006) companies are only legally required to notify the Department of impending redundancies of 20 or more employees. Companies who propose less than 20 redundancies are not included in the statistics. As a result, the figures provided are likely to be an underestimate of total job losses, however, it is not possible to quantify the extent of the shortfall.

Key Findings
- 230 confirmed redundancies in March 2019
- 47% of redundancies confirmed in the Manufacturing sector in the last year
- 1,104 proposed redundancies between mid-March and mid-April 2019, which is the highest mid-monthly total since late 2015

Figure 3: Confirmed and proposed redundancies – Annual totals, Apr-Mar 08/09-18/19 (non-zero axis)

Confirmed redundancies
During March 2019, the Department was notified of:
- 230 confirmed redundancies, higher than the previous month’s revised total of 17.

Over the latest twelve month period there were:
- 2,357 confirmed redundancies, which was an increase of 24% from the previous year (1,906)
- 1,102 (or 47%) confirmed in manufacturing, which was higher than the previous year (594 or 31%)
- 614 (26% of all confirmed redundancies) in the wholesale and retail trade; repair of motor vehicles and motorcycles
- a further 192 (8% of all confirmed redundancies) in construction.
Proposed redundancies

Between mid-March 2019 and mid-April 2019, there were:

- 1,104 proposed redundancies, representing an increase on the previous monthly period total of 122 proposed redundancies.

Over the latest twelve month period there were:

- 2,598 proposed redundancies, which was a decrease of 23% from the previous year (3,388)
- 810 (31%) proposed in manufacturing, which was lower than one year ago (934)
- 652 (25% of all proposed redundancies) in administrative and support service activities
- a further 560 proposed redundancies (22% of all proposed redundancies) in wholesale and retail trade; repair of motor vehicles and motorcycles.

It should be noted that since not all proposed redundancies actually take place, the confirmed total provides a better indication of real job losses.

Further information is available on the NISRA - Economic and Labour Market Statistics website: Redundancies
3 Employment

LFS employment

**LFS employed**: people aged 16 or over who did at least one hour of paid work in the reference week (whether as an employee or self-employed); those who had a paid job that they were temporarily away from; those on government-supported training and employee programmes and those doing unpaid family work.

*Note: For analysis purposes, numbers refer to people aged 16 and over while rates relate to people aged between 16 and 64 years*

**Key Findings**

- Employment rate increased over the quarter and the year to the highest on record
- Employment rate remained below the UK average and was the second lowest of the twelve UK regions
- UK employment rate is at its joint highest on record

**Figure 4: Seasonally adjusted employment rate, Dec-Feb 2009 to Dec-Feb 2019**

Figure 4 shows that over the last 10 years the NI employment rate has consistently been below the UK average. The most recent NI employment rate for those aged 16-64 for the period December-February 2019 was estimated at a record high of 71.2%. The UK employment rate for those aged 16-64 was 76.1%, the joint highest on record. Increases were experienced in both male and female employment rates over the year.
Employment

The most recent NI employment rate for those aged 16-64, for the period Dec-Feb 2019, was estimated at 71.2%. This represents:

- an increase of 1.4pps over the quarter
- an increase of 1.8pps over the year.

The number of persons in employment (16+) in the period Dec-Feb 2019 was estimated at 860,000, which was:

- an increase of 16,000 over the quarter
- an increase of 19,000 over the year.

Employment by gender

Of those aged 16+ in employment, 52% (447,000) were male and 48% (413,000) were female. Annual changes by gender included:

- the male (16-64) employment rate (74.4%) increased by 1.6pps over the year
- the female (16-64) employment rate (68.0%) increased by 2.0pps over the year

Regional comparison

The employment rate in NI (71.2%) was:

- below the UK average (76.1%)
- the second lowest rate among the twelve UK regions. (higher than the employment rate for North East, 71.0%)
- This is the first time since Oct-Dec 2013 that Northern Ireland has not had the lowest employment rate of the 12 UK regions.

Further information is available on the NISRA - Economic and Labour Market Statistics website:
LFS employment
Quarterly Employment Survey (QES) – First published March 2019

The QES is a business survey which samples approximately 6,000 companies who are asked to provide employment data for each of their business activities. This information is then collated by Economic and Labour Market Statistics, from which employee jobs estimates are produced.

**QES employee:** An employee is defined as anyone aged 16 years or over that is directly paid from a business’s payroll for carrying out a full-time or part-time job or being on a training scheme in Northern Ireland.

**Key Findings**
- Employee jobs increased over the quarter and year to a record high in December 2018.
- Private sector employee jobs increased over the quarter and year to a record high.
- Public sector employee jobs increased over both the quarter and the year.

**Figure 5: Index of Employee Jobs, December 2008 to December 2018**

Figure 5 shows the estimated seasonally adjusted employee jobs, indexed to allow comparison between NI and the UK.

The UK reached its lowest point in December 2010, more than a year before the NI low in March 2012. Both NI and the UK have surpassed their pre-downturn peaks; NI jobs are now 5.6% above their June 2008 level while UK jobs are 7.6% above their September 2008 level.
Employee Jobs

The seasonally adjusted employee jobs total in Northern Ireland at December 2018 was 773,750, which was:

- an increase of 0.7% (5,410 jobs) from the revised September 2018 estimate of 768,340.
- an increase of 1.9% (14,350 jobs) over the year.
- The annual increase in employee jobs was statistically significant.

Employee jobs by sector

The seasonally adjusted quarterly change consisted of:

- an increase in the manufacturing sector (0.4% or 320 jobs), services sector (0.7% or 4,340 jobs), construction sector (2.0% or 700 jobs) and other sector (0.2% or 50 jobs).
- an increase of 0.7% (4,160 jobs) in the private sector and
- an increase of 0.1% (180 jobs) in the public sector.

Over the year to December 2018:

- an increase in the manufacturing sector (2.5% or 2,110 jobs), services sector (1.7% or 10,360 jobs), construction sector (2.2% or 760 jobs) and other sector (5.0% or 1,130 jobs).
- the private sector increased by 2.3% (12,860 jobs).
- the public sector increased by 0.6% (1,260 jobs).

Private sector employee jobs have grown to a series high in December 2018 (565,480 jobs), and are now 10.4% above a pre-downturn peak which occurred in June 2008. Public sector jobs showed an increase over the year to December 2018 to 207,950 jobs, however there are now 20,240 fewer public sector jobs than the public sector series peak in September 2009 (-8.9%).

Further information is available on the NISRA - Economic and Labour Market Statistics website: Quarterly Employment Survey

Further breakdowns of employee jobs by geography and industry are available from the Business Register and Employment Survey.

Comparisons between LFS Employment and QES Employee Jobs

The concept of employment (measured by the LFS as the number of people in work) differs from the concept of jobs, since a person can have more than one job, and some jobs may be shared by more than one person.

The LFS and QES measure employment in different ways. The LFS is a sample survey carried out by interviewing individuals about their personal circumstances and work. The QES is a quarterly survey of businesses which provides short term employee jobs estimates for Northern Ireland. It surveys all public sector jobs, all private sector firms with 25 or more employees and a sample of the remainder. LFS employment figures are based on a rolling three month period and QES measures the number of jobs on a particular day.

LFS employment includes those who are employed, self-employed, unpaid family workers and those on Government supported training programmes. QES employee jobs include full-time and part-time jobs and those on a training scheme and excludes self-employed.
Vacancies – First published January 2019

Headline figures are presented for vacancies which have been notified to Job Centres / Jobs & Benefits Offices (J&BO) of the Department for Communities (DfC). A small proportion of vacancies notified are based in the UK mainland or in the Republic of Ireland. The statistics do not represent the total unsatisfied demand for staff by employers, but are only those vacant positions notified by employers to DfC.

Key Findings

- There were 13,492 vacancies notified in the third quarter of the 2018/19 financial year
- An increase of 12.7% when compared against the same period in the 2017/18 financial year

Figures in the above table are not National Statistics.
(1) Monthly notified vacancies are all new vacancy positions notified and added to JobCentres / Jobs & Benefits Offices of the Department for Communities.
Notified is subdivided by financial years which run from 1st April to 31st March.
All statistics are derived from data extracted from the Department for Communities Client Management System (CMS).
(2) Vacancies data is published quarterly and reported by financial year. Data for October-December 2018 was published January 2019.

Further statistics are available on the DfC website: DfC Statistics
### Economic inactivity

#### LFS economic inactivity

**Economically inactive:** people who are neither in employment nor unemployed on the ILO measure. This group includes all those who are looking after a home, long term sick or disabled, students and retired.

#### Key Findings

- The economic inactivity rate decreased over the quarter and over the year
- NI economic inactivity remains the highest of the twelve UK regions

#### Figure 6: Seasonally adjusted economic inactivity rates (16-64), Dec-Feb 2009 to Dec-Feb 2019

![Graph showing economic inactivity rates](image)

Figure 6 shows that, over the last 10 years, economic inactivity in NI has been consistently higher than the UK average. During the past 10 years, the UK inactivity rate has been on a downward trend. Economic inactivity in NI has mostly been decreasing from 2017, following a period of increasing inactivity between 2016 and 2017. The current inactivity rate (26.6%) is one of the lowest in the series.

#### Economically inactive

The seasonally adjusted economic inactivity rate (aged 16-64) for Dec-Feb 2019 was estimated at 26.6%, which represented:

- a decrease of 1.0pps over the quarter
- a decrease of 1.5pps over the year

The number of economically inactive persons (aged 16-64) was estimated at 310,000, which was:

- a decrease of 11,000 over the quarter
- a decrease of 18,000 over the year
Regional comparison

The NI economic inactivity rate for those aged 16-64 stood at 26.6%. This was:

- higher than the UK average rate (20.7%)
- the highest of the twelve UK regions.

Further information is available on the NISRA - Economic and Labour Market Statistics website: 
LFS economic inactivity
5  Earnings

Annual Survey of Hours and Earnings (ASHE)

ASHE provides information on employees’ hourly, weekly and annual earnings by gender, work pattern, industry and occupation. It has been designed by the Office for National Statistics and is carried out in Northern Ireland by NISRA statisticians.

Gross weekly pay includes basic pay, overtime pay, commissions, shift premium pay, bonus or incentive pay and allowances, and is before deductions for PAYE, National Insurance, pension schemes, student loan repayments and voluntary deductions.

Median measures the amount earned by the average individual, i.e. the level of earnings at which half the population are above and half the population are below.

Full-time employee is defined as anyone aged 16 years or over that is directly paid from a business’s payroll for carrying out more than 30 paid hours per week (or 25 or more for the teaching professions).

Key Findings

- The median full-time weekly earnings in NI was £521 compared with £569 in the UK
- Earnings increased over the year in both NI and the UK
- When adjusted for inflation, weekly earnings increased over the year in NI and the UK

Figure 7: Median gross weekly earnings for full-time employees in NI and the UK, April 1998-2018

Note: there were a number of methodological changes during the series in 2004, 2006 and 2011 – see Section 6 of the Annual Survey of Hours and Earnings publication for further information

The median gross weekly earnings for full-time employees in NI at April 2018:
- was £521, 8.4% lower than the UK median (£569)
- was the fifth lowest out of 12 UK regions
• increased by more (4.2%) than the UK median (3.5%) and had the joint highest increase of the UK regions over the year
• when adjusted for inflation increased by 2.0%
• was highest for those who work in Belfast (£565) Local Government District (LGD), which was the only LGD where earnings were above £550 per week
• was lowest in the Causeway Coast and Glens LGD (£431), the only LGD where earnings were below £450 per week.

Further information is available on the NISRA - Economic and Labour Market Statistics website: Annual Survey of Hours and Earnings
LFS unemployment
The definition of unemployment used in the Labour Force Survey (LFS) is in accordance with that of the International Labour Organisation (ILO). The ILO unemployed includes those without a job who were able to start work in the two weeks following their LFS interview and had either looked for work in the four weeks prior to interview or were waiting to start a job they had already obtained.

The definition of unemployment rate is the percentage of economically active people who are unemployed.

Please note that it is possible for the number of unemployed to increase and the unemployment rate to fall during the same period, as the latter measure is a ratio e.g. if the number of economically active has increased at a faster rate than the number unemployed, the unemployment rate will fall.

LFS employment
The definition of ILO employed applies to anyone (aged 16 or over) who has carried out at least one hour’s paid work in the week prior to interview, or has a job they are temporarily away from (e.g. on holiday). Also included are people who do unpaid work in a family business and people on Government-supported employment training schemes.

The definition of employment rate is the percentage of all working age (16-64) people who are employed.

The ILO measures are particularly useful for examining short term and long term trends over time and key LFS time series data are available both seasonally adjusted and unadjusted.

Reporting Change and Sampling variability
Reported change is calculated using unrounded data and is presented to 1 decimal place. When a change is less than 0.05pps, it is rounded to 0.0pps and the data is reported as unchanged.

The LFS is a sample survey and, as such, estimates obtained from it are subject to sampling variability. If we drew many samples, each would give a different result. The ranges shown for the LFS data in the table overleaf represent 95% confidence intervals, i.e. we would expect that in 95% of samples the range would contain the true value. These confidence intervals have been calculated using data that are not seasonally adjusted, with the relevant sampling errors produced then applied to the seasonally adjusted data.

If the ‘annual change’ for an estimate has increased or decreased by more than the ‘sampling variability of the change’, this change is statistically significant. If none of the reported changes over the year or the quarter were statistically significant, then the recorded changes did not exceed the variability expected from a sample survey of this size. Please note that the terms ‘statistically significantly’ and ‘significantly’ are used interchangeably throughout the report but always refer to the statistical significance of changes.

Table 3 shows the sampling variability of the estimates, and quarterly and annual changes. The final column contains the sampling variability that can be used when assessing change between two independent samples. Due to the LFS five wave structure, this means it can be used to assess changes over six quarters or more.

### Response Rates – Updated quarterly (last updated 19/02/19)

The total eligible sample for the October-December 2018 LFS consisted of 3,441 addresses (1,116 chosen at random from the Valuation & Lands Agency list of domestic properties and 2,325 carried forward from the previous quarter). A random start, fixed interval sampling technique of the addresses, which are ordered by Council Area and Ward, is used. This ensures a proportional representation across the Council Areas in Northern Ireland.

Only private household addresses were eligible, since the LFS is a survey of the private household population. Every selected address is interviewed on five successive occasions, such that in any one quarter, a fifth of the sample will be receiving their first interview, one fifth their second and so on, with one fifth receiving their fifth and final interview. This results in an 80% sample overlap between quarters.

*Of the addresses sampled, a small number contained more than one household and some contained households which moved during the quarter. Residents in NHS hospital accommodation (formerly called nurses’ homes) and students living in halls of residence or boarding schools are included to improve the coverage of young people.
LFS Comparisons

Estimates of employment, unemployment, and economic inactivity are derived from the LFS. The most robust estimates of short-term movements in these estimates are obtained by comparing the estimates over rolling three month periods. For example, the 3 months ending February 2019 should be compared with the estimates for September-November 2018, which were first published on 22nd January 2019. This provides a more robust estimate than comparing with the estimates for November-January 2019, as the December and January data are included within both estimates. Effectively, observed differences are those between the individual months of November 2018 and February 2019. The LFS is sampled such that it is representative of the NI population over a three month period, not for single month periods.

Seasonal adjustment

All estimates discussed in this Statistical Bulletin are seasonally adjusted unless otherwise stated. Like many economic indicators, the labour market is affected by factors that tend to occur at around the same time every year, for example, school leavers entering the labour market in July and whether Easter falls in March or April. To compare over months or quarters, the data are seasonally adjusted to remove the effects of seasonal factors and the arrangement of the calendar.

Thresholds

Thresholds are used to determine whether LFS data are suitably robust for publication. The threshold used for the quarterly LFS datasets is 8,000. As such, data below 8,000 are suppressed.

LFS revisions

LFS microdata are routinely revised to incorporate the latest population estimates. The latest revisions were published in February 2019 and affect LFS data from the period June - August 2011 onwards. In addition, data from November-January 2018 onwards also reflects a boost to the LFS sample that has been rolled out from January 2018 beginning with wave 1 and will be fully implemented through all 5 waves by April-June 2019. A review of seasonal adjustment methodology has also taken place and affects seasonally adjusted data from June-August 2011 onwards. The magnitude of the revisions are relatively small, with the majority of revisions to the unemployment rate falling within +/-0.1 percentage points but the biggest revision being -0.3pps; and the working age employment rate mostly falling within +/- 0.1 percentage points but the biggest revision being 1.0pps. More information on the revision policy concerning labour market statistics can be found through the following link: Labour market statistics revisions policy

Experimental Claimant Count (Jobseekers Allowance claimants plus some out-of-work Universal Credit claimants)

In March 2018, the NI JSA-only claimant count was replaced by an experimental measure based on JSA claimants plus out-of-work UC claimants who were claiming principally for the reason of being unemployed.

The new claimant count is categorised as experimental as the statistics are in the testing phase and not yet fully developed. The ONS have produced a useful ‘Guide to Experimental Statistics’ and an FAQ document explaining the difference between the two measures is available on the NISRA website.

The experimental Claimant Count data are no longer included in the Labour Market Report. The data tables will continue to be published on the NISRA website and counts will also be available from NOMIS.

Redundancy Legal Requirements

Under the Employment Rights (Northern Ireland) Order 1996 (amended 8 October 2006), companies are only legally required to notify the Department of impending redundancies of 20 or more employees. Companies who propose less than 20 redundancies are not included in the statistics, so there is likely to be an under count.
Annual Survey of Hours and Earnings (ASHE)

Please note, changes in NI earnings over the year and relative to the UK can be influenced by a range of factors including the timing of pay settlements, the extent of overtime and differences in the composition of the workforce. As ASHE is a sample survey, results are also subject to an associated level of sampling variability.

Further information is available at: Northern Ireland Annual Survey of Hours and Earnings

Quarterly Employment Survey (QES)

All QES data contained in the LMR are adjusted for seasonality. The seasonal adjusted series started in 2005. Public Sector and Private Sector series are seasonally adjusted separately to the industry breakdowns. As such, the two series may differ at the NI level.

Revisions

QES estimates are revised quarterly to reflect the latest information provided to the Department by employers. The September 2018 seasonally adjusted estimate first published in December 2018 has subsequently been revised up 0.3%.

For further details of QES revisions please see the following link: QES Revisions

Pre Release Access

The UK Office for National Statistics (ONS) announced the removal of early access by Ministers and officials to all ONS official statistics from 1 July. For further information please see correspondence between John Pullinger the National Statistician on this issue and the reply from Sir David Norgrove, the Chair of the UK Statistics Authority.

As a number of ONS publications affected by this decision include Northern Ireland (NI) level statistics, NISRA also removed early release access for NI officials to the equivalent NISRA publications and associated economic output statistics. This is based on analysis of the proxy nature of NI data for UK trends. The Labour Market Report published on 12th July 2017 was the first release under these new arrangements.

The Northern Ireland Statistics and Research Agency wishes to thank the participating households for their co-operation in agreeing to take part in the survey and for facilitating the collection of the relevant data.
